Chapter 1 : GingerScraps :: Paper Packs :: Nifty 50's Shabby Papers

*50 Nifty Super More Friendship Crafts [Charlene Olexiewicz] on blog.quintoapp.com *FREE* shipping on qualifying offers. Provides step-by-step instructions and a list of items needed for making each craft object.*

Webber Photo by Wendell T. Shorten your dryer-vent hose. First, disconnect it and vacuum it out. A short and unobstructed line makes your dryer run more efficiently. Your clothes will dry about 20 percent faster. Borrow specialized tools—gas-powered post-hole diggers and table-mounted routers—from a DIYer in your area for a small fee. Go to Zilok for far better deals than rental retailers offer. Getting to know fellow renovators in your neighborhood with whom you can swap tips. Shuttering closets along exterior walls also helps to insulate the house. Zilch—although it may take a few minutes for your clothes to reach room temperature before you put them on. Choose one neutral trim paint for the entire house rather than buying a gallon of a particular color for each room and using only a fraction of each can. You have to forgo the trendy color combos in the paint manufacturer brochures. Many regional power suppliers offer rebates for reducing electricity consumption during periods of peak demand. Washing clothes and dishes at night during nonpeak hours, and turning the thermostat up or down a couple of degrees during a cold snap or heat wave. Make your own cleaning solutions using inexpensive kitchen staples, such as white vinegar and baking soda. See The Green Guide for recipes. A few bucks in extra pantry supplies. Turn down the thermostat on your water heater. But or even degrees is plenty hot. A few minutes with a screwdriver in the utility room. Your kids are less likely to scald themselves if the max water temperature is Install dimmer switches and use energy-efficient halogen bulbs, rather than incandescents. Dimmable CFL s are even thriftier, but some flicker at low power. Halogens tend to outlast incandescents, saving more money over the long haul on replacement lights. Replace central-air-conditioning filters every month during the summer to keep air flowing freely through the ducts and reduce strain on the blower motor. Get your chimney swept in the summer for an off-season price. Just a little forethought. Use your microwave instead of your range; it consumes half the power. Having dinner ready in a fraction of the time. It runs on batteries, which use 80 percent less electricity than a desktop computer. You can relax on the sofa while perusing coupon sites. Preformed foam tubes fit right around the pipes, thanks to a slit along their length. Halving the wait for hot water to reach upstairs faucets. Set up a makeshift kitchen when a remodel project temporarily leaves you without a cooking area. All you need is a prep surface, micro-wave, coffeemaker, and fridge. Get the work crew to help move your fridge. Choose a light-colored roof. Using pale shingles, particularly if you live down south, will reduce the solar heat your roof absorbs, reducing the need for air-conditioning. Up north, the cooling benefit is offset somewhat by the loss of solar warming in the winter. The same as dark roofing. Your "cool roof" may earn you a utility company rebate. Get your fall yard-cleanup crew to clear your gutters instead of having a gutter guy make a special trip. Set your computer to sleep—not just the monitor, but the hard drive, too—so that it automatically dims after 10 minutes of nonuse. Like people, screens and hard drives age more gracefully with plenty of rest. Wait to replace your grill, lawn mower, or patio furniture until the fall, when stores mark down their inventory to make room for holiday decorations and snowblowers. Making do with what you have this summer. Retailers—especially online ones, such as Target—often provide free shipping on leftover warm-weather gear. Enter your ZIP code and compare rates offered by providers in your area. A few minutes online. The switch to a new carrier can usually be made without an in-home service call or fee, and you can keep your old phone number. Prune that overgrown rhododendron rather than replace it. If the shrub is blocking your front windows, cut it down to 18 inches high in late March. Buy a deluxe battery recharging station and stop using disposables. Plant a deciduous tree on the south, west, or east side of your house. If something breaks, haggling with the manufacturer to get it fixed for free or paying for repairs out of your own pocket. Not getting snagged by the fine print. Comparative shop online for everything from light fixtures to fridges. Then ask your local retailer to match the lowest price you find. Sears, for example, will match most online quotes for appliances and even

reduce it by 10 percent of the difference between their advertised price and the better deal you found. A few minutes surfing the Web, plus some printer ink. Install a ceiling fan. In the winter, run it at low speed in a clockwise direction to recirculate the warm air that rises to the ceiling. This will allow you to lower the thermostat a couple of degrees. Reverse the fan direction in the summer and the airflow creates a windchill effect, making you feel cooler. Your fellow Freecycleers expect you to donate items, not just take freebies. Freeing up space in your garage and helping reduce the millions of tons of waste dumped into landfills each year. Logs will dry out and be ready to burn by the time snowflakes fall. Time stacking wood in a dry spot outdoors so that it can season in the open air. Time reviewing an itemized estimate. Plug in a SmartStrip. Three-quarters of the energy that electronics burn is consumed when the equipment is turned off. Rather than unplug items after every use, hook them up to a SmartStrip surge protector, which automatically kills power to electronics when you turn them off and returns it when you switch them back on. Two always-hot outlets ensure that slow-to-reboot devices like your digital cable box can be left on all the time. Toss the extra fridge. Many utility companies collect old fridges for free or even pay money for them. No more stocking up on extra frozen waffles and OJ. Your garage or basement just got a lot bigger. The battery-operated device limits showers to 5, 8, or 11 minutes. You can install it yourself. Do your own energy audit. Schedule a furnace or boiler tune-up every year to boost its efficiency. Tune-ups remove scale, soot, and corrosion, postponing repairs and extending the life of your heating plant. Get the contractor discount on home-improvement products. Many local dealers offer a 5, 10, or even 15 percent discount to tradespeople. So, for example, drop the name of your plumber when buying new bath fixtures. Occasionally you may have to do a bit of sweet talking. You get unlimited calling, with free long-distance in the U. Install an under-sink water filter, and stop buying expensive bottled water. Reducing the environmental impact caused by the manufacture and disposal of plastic bottles—as well as shipping them to your home from far-flung places like Fiji. Install a wireless light switch. Simply attach a battery-operated device to the wall and screw its receptor into the lamp socket, which then receives the bulb. Appeal your property tax assessment yourself. One in three homeowners who do so are successful in getting their fees reduced, according to the National Taxpayers Union. The tax reduction will last for many years to come. Work with a designer—lighting, kitchen, bathroom, or interior—from the retailer where you intend to buy your products. Cancel your trash pickup service if you currently pay a private company to cart away your refuse. Bring it to the dump yourself. A few tanks of gas per year. Lock in a price cap for your heating oil or natural gas when prices are low to protect yourself from rate hikes over the coming months.

Chapter 2 : 50 Nifty Super Origami Crafts by Andrea Urton and Michelle Ghaffari p | eBay

Get this from a library! 50 nifty super more friendship crafts. [Charlene Olexiewicz] -- Provides step-by-step instructions and a list of items needed for making each craft object; also indicates level of difficulty for each.
