Texas alone provided more hours of education to students than all other States combined! Our greatest success, though, was in making sure our students had both the knowledge and skills needed to pass their national credentialing exam. Through the use of a series of handouts, outlines, and sample exams, we prepared those students to sit for their exam. Of students who completed their training through PACT, passed their exam on the first attempt; 10 passed the second time through, and only two students did not become credentialed, choosing instead to pursue other careers. After the project ended, we realized that there was an ongoing need to help students prepare for and successfully navigate their national credentialing exam. We have currently assisted more than 32, students since the first edition was published in Our students first-time test takers pass their exam at a higher rate than the current national average, and many tell us that the review materials, test taking tips, and sample exams are a significant part of that success. Student Testimonials " I am sending you this email to thank you for all of your work to get me through both the written and oral test for my LCADC credential. I passed my written test in June with a score, and took my oral exam in July. I appreciate all that you have done and the classes that I took with both of you definitely helped me out in preparing for both tests. I will definitely let people know at my current employment that the classes are very helpful. In the 2 days I have had the book it has been invaluable for focused study. The best money I ever spent. Then I found your review manual - what a great find! When I took the exam the second time, I sailed through it and passed with flying colors. Thank you, thank you, thank you! The biggest help your guides provided was the section on "how" to take the test - how to choose the best answer, how to read the questions, etc. I am convinced that this made the difference for me, because it helped me not to get tricked by the wording of the questions on the exam. The content was excellent as well. There were some questions on the test that were exactly based on something I studied in the guide!
