More ways to shop: Visit an Apple Store, call MY-APPLE, or find a reseller.

Troubleshooting Most problems with Apple TV can be solved quickly by following the advice in this chapter. For additional tips and troubleshooting information, see the Apple TV Support page at www.apple.com/support. Your TV is turned on and set to the correct input. Your network and Internet connections are on and working properly. Wait 30 seconds, and then reconnect everything. Make sure the photos you want to share are selected. **Page 29** Make sure Apple TV and your computer are on the same local network. If your network has security enabled, make sure you enter the correct password. If it starts with For information, see the documentation that came with your TV. **Reset Apple TV** by doing one of the following: This requires you to reenter all of your network and account information. **To reset all settings:** **To restore Apple TV:** Restoring Apple TV can take some time, so be patient. **To restore Apple TV using iTunes:** This table describes where to get software and service information. **To learn about Do this Service and support, discussions, tutorials, Go to:** For an onscreen iTunes tutorial available in some areas only , go to: **Safety and regulatory compliance Care And Cleaning Using connectors and ports** Never force a connector into a port. Check for obstructions on the port. Make sure that the connector matches the port and that you have positioned the connector correctly in relation to the port. Then use a soft, lint-free cloth. Avoid getting moisture in openings. **Page 35** Apple Inc. Apple Product Documentation. The new way to watch TV. The Apple TV App is the place for everything you want to watch, from movies and TV shows to live sports and news.. See Apple TV App at a glance.

Figure shows the new remote. It has the following buttons: Press and hold for contextual menus. Press to return to the previous menu. Press and hold to talk in those countries that have the Siri Remote. In all other countries, press to open the onscreen search app. Play and pause media. Press to return to the Home screen. Press twice to view open apps. Press and hold to sleep. You can create games, utility apps, media apps, and more using the same techniques and frameworks used by iOS. New and existing apps can target both iOS and the new Apple TV, allowing for unprecedented multiplayer options. Each template produces a unique, full-screen display of information. You modify a page by adding or removing elements from a template. When a user selects an app icon in the top row, the top of the screen shows content related to that app. This area is called the top shelf. Focus and Layered Images A UI element is in focus when the user highlights an item, but has not selected an item. Each layer of the image rotates at a slightly different rate to create a parallax effect. This subtle effect creates a sense of depth, realism, and vitality, and emphasizes that the focused item is the closest thing to the user. Your layered images are going to be created by your designers. But how do you get them into your app? The UIImageView class has been modified to support layered images, so in most cases you only need to make minimal coding changes. Your workflow is going to change depending on whether you are adding the images directly to your app or loading them from a server at runtime. Describes how to add a top shelf extension to your app. New User Interface Challenges Apple TV does not have a mouse that allows users to directly select and interact with an app, nor are users able to use gestures and touch to interact with an app. Instead, they use the new Siri Remote or a game controller to move around the screen. In addition to the new controls, the overall user experience is drastically different. Macs and iOS devices are generally a single-person experience. A user may interact with others through your app, but that user is still the only person using the device. With the new Apple TV, the user experience becomes much more social. Several people can be sitting on the couch and interacting with your app and each other. Designing apps to take advantage of these changes is crucial to designing a great app. Moreover, your app can only access KB of persistent storage that is local to the device using the UserDefaults class. Outside of this limited local storage, all other data must be purgeable by the operating system when space is low. You have a few options for managing these resources: Your app can store and retrieve user data in iCloud. Your app can download the data it needs into its cache directory. Downloaded data is not deleted while the app is running. However, when space is low and your app is not running, this data may be deleted. Do not use the entire cache space as this can cause unpredictable results. Your app can package read-only assets using on-demand resources. Then, at runtime, your app requests the resources it needs, and the operating system automatically downloads and manages those resources. Knowing how and when to load new assets while keeping your users engaged is critical to creating a successful app. For information on on-demand resources, see On-Demand Resources Guide. This means that every app developed for the new Apple TV must be able to store data in iCloud and retrieve it in a way that provides a great customer experience. In an app written in Swift, use a build configuration statement or an API availability statement. Apps automatically adopt a light theme unless you specifically tell your app to adopt dark themes. If you create a new app using Xcode 8. Universal purchase allows users to download both iOS and tvOS versions of your app with a single purchase, providing a seamless experience for your users. Creating a Background Audio App You must declare that your tvOS app provides specific background services and must be allowed to continue running while in the background. Specify the string value audio to indicate your app plays audible content to the user while in the background.
