Chapter 2 : FacultyBooks - CATALOGING OF AUDIOVISUAL MATERIALS

Hand write call number and "Fogler Library," for the stacks, or "Learning Materials Collection" across bottom of slide's cardboard, or wherever possible. Plate book or box and strip if contained in a book.

This article focuses on chapter 10 of AACR2 and the special problems of cataloging materials such as games, toys, models and dioramas, realia, and three-dimensional art originals and reproductions. Some complete and some partial bibliographic records for these types of material are included. Cataloging of realia, cataloging of models, cataloging of toys, cataloging of games, MARC format; descriptive cataloging -- rules; Anglo-American cataloging rules Cataloging Kits. The major problem in cataloging kits is that of identifying what is actually a kit according to AACR2 -- this problem is discussed, with examples given. The rules themselves are discussed and examples of kits are included. Sections also discuss processing these materials for circulation, weeding and preservation, and the future of kits. By Jean Weihs Abstract. Much of this history discusses the personal experience and recollections of the author, who since has been involved in the development of rules for nonbook cataloging as an author of one of the works on which the AACR rules for nonbook materials are based, as a member of many cataloging committees, and as chair of the Joint Steering Committee for Revision of AACR. Opposing points of view are described and reasons for actions taken are outlined. Its History, Use, and Future. By Lian Ruan Abstract. Besides providing descriptive cataloging for nonprint materials, the Library assigns in-depth subject terms and modified Library of Congress Classification to the catalog records. Based on the findings of this comparison, it is recommended that any library, media collection or archive that uses LCSH for the provision of topical subject access to moving images and broadcast materials strongly consider using LCSH for genre and form access to moving images and broadcast materials as well. A number of recommendations are made for improving LCSH as a tool for form and genre access to moving image materials and an exhaustive list of LCSH terms which are examples of a form or genre is appended. Reviews the setting in which nonprint materials collections have been housed and used, namely, the academy, and its traditions of collecting these materials. Compares older data on the state of non-electronic nonprint media collections in academic libraries with more recent reports and freshly-collected data obtained in at the Eighth Biennial Conference of Online Audiovisual Catalogers, to see if any trends are discernible. Then, superimposes findings from a review of recent literature on the impact of the Internet on collection development and interprets what it indicates about the collection of electronic resources. Finds that traditional nonprint materials have not gained an important share of collections while newer electronic resources have achieved an important collection share in just a few years, and it is increasing. The developments facilitate the work of the institution and confer a positive value on librarians doing the job. Attention to materials in older forms of nonprint media continues to shrink as some become obsolete and others are digitized, crossing over into the world of electronic resources. If the trend to digitize traditional nonprint materials continues, it should have a positive effect on the accessibility and potential use of all media by scholars and teachers alike. By Heeja Chung Abstract. By Scott Piepenburg Abstract. School libraries face many unique needs for the cataloging of audiovisual materials. Searchers are relatively inexperienced, some being exposed to an online system for the first time. Librarians who create the records for these users frequently wear many hats, including bibliographic instruction, acquisitions, and management leader. Cataloging is often only one piece of their responsibilities. The users grown in school libraries will depend on the skills imparted to them by a librarian as they progress through the socio-educational system and go on to use public libraries, academic and research facilities, and corporate libraries. The skills they obtain here -- knowledge of how an automated system works and how information can be mined from it --serve as a foundation for life-long learning. School libraries, audiovisual cataloging, school library automation, online catalogs Non-Print Media at the National Library of Medicine. The National Library of Medicine has maintained a leadership role in the promotion of audiovisual formats for many years. An overview of the development of producing, collecting, and cataloging non-print material at NLM is provided, along with an examination of NLM current cataloging practices.

Chapter 4 : Cataloging: Audiovisual Materials - Raymond H. Fogler Library - University of Maine

A new more comprehensive system for cataloging audiovisual materials is described. Existing audiovisual cataloging systems contain mostly descriptive information, publishers' or producers' summaries, and order information. This paper discusses the addition of measurable learning objectives to this.

Chapter 5 : CCQ Vol. 31, Nr.3/4

Cataloging of Audiovisual Materials and Other Special Materials: A Manual Based on AACR2 and MARC 21 / Edition 5 Society's love affair with information has led to a proliferation of media that shows no sign of abating.
