## Chapter 1 : child development for child care and protection workers | eBay

*Child Development for Child Care and Protection Workers is a classic text for students and practitioners in the child care and protection field which summarises important current thinking on child development and applies it directly to practice.*

Paediatric Nursing Table of contents Acknowledgements. Framework for understanding child development. Protective factors and adversity. Stress and support in the lives of children facing adversity. The chapters, written by experts in the field, will assist those working with children and young people to understand key developmental processes. The practical approach used throughout this book will also ensure practitioners are well equipped to undertake child-centred assessments and identify appropriate interventions. Readers will value *Child Development for Child Care and Protection Workers* for the wisdom that it brings and the guidance that it offers. And armed with the knowledge so neatly wrapped up in the pages of this very sensible book, the reflective practitioner will be well placed to make young lives that much better. This chapter explains succinctly what to look at and why. It is above all a book that equips professionals with rich theoretical knowledge which encourages us all to actively contribute to promoting resilience and protective factors in children and young people. It is most definitely a book that is meant not just to be read but to be applied and can, in my opinion, help to reinvigorate the "drained" practitioner. Another positive feature of this book is that the layout enables the reader either to identify particular chapters relevant to their practice and read them in isolation or make sense of them in the wider context of the book. The text should also be praised for recognising the importance of considering each child as an individual, and taking wider environmental factors and the impact they have, into consideration. *Social Work in Action* What a refreshing change to read a text on child development which is child-focused and embedded in an appropriate theoretical background. The bibliography is extensive and appropriate, and throughout there are suggested activities for the students to investigate. I found the activities to be thought-provoking, challenging and an excellent guide to a fully focused assessment of children. The child-focused nature of the text shines throughout. It is to be hoped that this text is used widely, and that the next generation of child protection workers has the understanding and the knowledge to enable well-informed, child-focused decision making in child protection.
