

Chapter 1 : Water Softener Systems For Your Home | EcoWater

The Energy Evolution, the final volume in the revolutionary Eco-Technology series, contains radical environmentalist Viktor Schauberger's groundbreaking writings on methods for energy generation that harness the enormous potential of Nature.

Standing as we are on the threshold of a new era, the first dawning of a new age, there is an air of expectancy of things imminent and better. In a certain sense this has psychologically programmed us with a willingness to embrace new concepts, to inaugurate and accept far-reaching change. What we are concerned with here is an inversion of all that has hitherto been held to be true scientifically and technologically. This is no form of repetition, a re-cycling of outworn concepts and processes, but an upward movement to totally new and higher levels not only of perception, but also of application of systems of an entirely new dimension and order. While progress of a sort is made as the wheel turns, the wheel itself does not evolve and always returns viii Introduction ix upon itself. Having no in-built capacity for change and transformation it effectively contributes nothing to real evolutive progress. Implicit in this evolution towards higher perception and a new *modus operandi* is the necessity to think an octave higher, as Viktor Schauberger so often expresses it. Just how fundamentally we will have to change our way of thinking and acting to achieve this we have yet to discover, although the information contained in this book will provide many of the necessary keys. Once inserted into the lock of evolution, new as yet unimagined vistas will unfold themselves and can become manifest, provided the will and determination are present to enter upon them. But what it is that must change to permit this to happen? Basically it is a question of the geometrical system so familiar to us. This is the geometry of Euclid and essentially involves the elements of the straight line, circle and point, all of which are perfect forms and therefore unchanging. In terms of their physical appearance, these are the cylinders, spheres, wheels, straight shafts, pipes, flat surfaces, etc. As transcendental constructs, i. Steeped in the grandeur of Euclidean edifices over the last two millennia and the apparent appropriateness and suitability of Euclidean geometry for all purposes, we must now reappraise our unqualified acceptance of it, for it lies at the very root of our troubles. On earlier European structures the straight lines and hard edges were softened and made pleasing to the eye through their often exuberant embellishment. The Chinese on the other hand, versed in the art of geomancy, constructed their traditional buildings differently, deliberately curving the profile of the roof. In their philosophy the straight line was the path preferred by dragons, the mythical personification of destructive power, whose violence could only be curbed by forcing it to move along curved paths. Intuitively the Chinese were aware that straight lines provoke and foster violent behaviour, a phenomenon on the increase worldwide. Since the beginning of the last century [s] there has been a rapid reduction of such visual complexity to one of virtual uniformity as this decoration has gradually been stripped away, reducing our built environment to a naked, stark and arid angularity. Because of this the rational mind began to cut out important factors that were deemed extraneous, so as to achieve the most economically effective outcomes. The result - violent discharges and inundations. Such simplicities of line not only disturb rivers, they also have a disturbing effect psychologically, because the eye, that most complex of organs requires an equal external visual complexity to maintain its health, balance and stability, transferring such states to the brain and psyche of its host. While contemplation of the rich diversity in colour and form of natural undisturbed forest - an apparent chaos but actually the highest state of order - brings us a sense of peace and inner tranquillity, when we are confronted by plantation forests, planted out in rows of same-age, same-species, same-height, sameshape trees, we experience a certain inner discomfort. A higher state of order and complexity has been reduced to a lower one. While such a relatively small reduction produces such a reaction, what effect do more major reductions have on us psychologically? We therefore belong to the world of Nature, to the world of sentient, intelligent creatures. And yet, indoctrinated by history, we do not perceive that the form of our dwellings, our physically enclosing structures, is at odds with those of other creatures; creatures whose sensitivity which is also our

birthright is such that their intercommunion with the subtlest energies and response to the influences surrounding them is extremely intimate and of an order now almost totally alien to us. No natural creatures live in rigid rectangularities, but in roundnesses and curvilinear forms such as burrows, nests and shells, the latter the product of the most complex systems of curves. While Nature makes use of these forms everywhere, we do not, and through our constant use of unnatural geometry in all areas of endeavour, we have largely estranged ourselves from her. We have never even thought to question the influence that continual exposure to unnatural straight lines may exert on our mental, intellectual and emotional processes, on the energies that motivate and animate us and cause us to behave in one way or another. No doubt it was for all of these reasons that Viktor Schauberg so joyfully declared: Gone are the mortifying elements of Euclid. The effective functional surfaces and forms of these machines incorporate the swirling spirals and sinuosities, the open elements of non-Euclidean geometry so prevalent in Nature. By incorporating such organic spiral configurations and egg-shapes in such devices, energies are produced that are life-affirming in lieu of those generated by conventional machines that are presently inexorably destroying it. Whereas in earlier days the technology to manufacture and mass-produce such devices cheaply and economically was not available, today this is no longer the case. This would remove the environmentally harmful point-loads of cities. Instead of being forced to live as human blood corpuscles, whose purpose is to maintain the flow of lifefluid in our machine-cities, we would be able to devote our energies to the evolvment of our innate creativity and to interact with Nature in the way that was always our birthright. Eventually wholly deserted, the deadly gridiron conurbations of brick and asphalt would be viewed as the cautionary relics of one of the dark ages of human history, albeit a necessary educative chapter in our evolution and without which this coming corner could not have been turned. To accomplish this, to swing wide the gateway to fresh fields of positive endeavour, all that is needed as Viktor Schauberg urges is the necessary will. The spiritual manifestation of this work is its effect. When such work is properly done it brings happiness, and when carried out incorrectly it assuredly brings misery. Your will is paramount! You can command Nature if you but obey her! It is from this volume that some of the passages in this book are obtained. Implosion Magazine Implosion is a quarterly magazine, funded by private subscription and generally oriented towards the lay reader. It was originally published by Aloys Kokaly from about and now runs to issues. Kokaly also founded the Verein zur Forderung der Biotechnik e. Other Sources Personal letters from Viktor Schauberg to various individuals. Regrettably in most cases this is missing, which has made accurate description of the device in question very difficult, the editor having to rely on other descriptions to aid in identification. In general, however, the discussion revolves around the function of four types of machine, namely the Air-turbine, the Repulsator, the Klimator and the Repulsine. As far as it has been possible reasonably to ascertain its proper attribution, all the data relating to each has been assembled under the relevant heading. Despite the confusion that may arise from the appearance of the same name in different chapters, it is to be hoped that in perusing the diagrams and studying the text, the reader will not only obtain a general understanding of the way these various machines function, but also many insights into what elements and shapes should be incorporated into future designs for machines based on implosion dynamics. In the original German certain passages overlapped and therefore as far as possible avoidable repetition has been removed. However, some passages still remain which the reader may find repetitive. After much deliberation, the editor decided to leave them virtually untouched as there was no way to remove them without disadvantageously affecting the coherence and detailed comprehension of the theme under discussion. A human being is a microcosmos, i. One component serves inwardness internalisation and the other outwardness dispersion. Both preconditions for motion regulate the eternal flow of metamorphosis *panta Rhei*. What most peoples have so far achieved is no culture, but merely a civilisation and a retreat from the true culture; a journey that was absolutely necessary in order, through experience, to take the next step forwards. To move forwards means to come to grips with temporal 2 The Energy Evolution processes. Whatever we meet with, we must consume as it were. We must digest it in our inner being. The product of this process of organic transformation is mental clarity non-spacial energies or the pure intuitive perception of the

true reality and the love of our Father. What we formulate with our thoughts alone, consumes and destroys. The machines of the future will not destroy their fuel, but direct the energies inwardly. In this way a harmonious motion manifests itself externally, which transmutes the used material organically, exalts it and refashions it one octave higher. The residual material thus becomes endowed with the necessary potency and provided with the possibility to resurrect itself in the succeeding earthly form of life. Earth, water, air and light are organisms, and between them lie the organs of the most diverse nature in a constant state of readiness to act. If we bring these organs together harmoniously; if we place every inner potential opposite its outer harmonic form, then the thing begins to gyrate within and about itself and to evolve, because in rhythmical sequence every impulse is countered by an expulse, through which the harmonic motion gives way to the inflowing and diffusing counter-movement. The counter-reactive transverse electrical potentials have to be stationed opposite the strongest longitudinal magnetic potentials. Out of this normal state of opposition the harmonic transitional point is created in the golden middle. This golden middle is the organic angle. It is the only true pathway upon which there is no upwards, no downwards, no sideways and no inwards, but only a movement in and about itself, which corresponds to the infinite will of God, the unity in the universality. Few will understand the meaning of the above! Some individuals, however, will obtain an indefinable inkling. This apprehension is none other than a dreamlike awakening and the incipient apotheosis of the hitherto animal mass. There is no birth without pain. Every death is followed by a birth. What we are experiencing today is a turning-point of time. Good luck to all those who understand it! Let them find one another as long as there is still time, for we are fast approaching a stupendous event. Viktor Schauberg, Vienna, May It has been proven psychologically that human beings can only appreciate or apprise, i. If this cannot be achieved, then all preaching is useless. And even the eye has first to learn how to see everything new; it too must therefore be awoken from its latency before it can grasp the seen. Above all, there must be a readiness to consider even supposed wonders as the forerunners of Some Philosophical Aspects of Natural Energies 3 forthcoming realities, for only thus can the foundation be laid upon which rational mind can calculate and analyse. Will and counterwill are functions of the temperatures that arise for one reason or another. Work is a function of the temperatures that lie above or below the turning point or point of intersection - the anomaly point - in which all life arises zero-point. This flow is an eternal motion-of-creation, which in turn gives rise to a constant creation-of-motion. Temperature is thus the difference between differences, out of which the ceaseless movement of evolution arises, which is itself the product of tensions resulting from the contrasting directions of movement. The movement of the planets is mirrored in the movement of earthly bodies and thus the possibility also exists to order the course of such planetary systems by means of a particular physical motion. Conversely, it is also possible to exploit planetary motion to produce physical motion, which will enable us to harness a constantly waxing motive force for our own use. Opposites have their appointed directions of movement and find their expression in the mutual interaction of living and moving matter. If we can now succeed in dosing like-directional dynagens² and in bringing the groups of substances thus organised into mutually opposing motion, then 1 Motion of-creation and creation-of-motion: This is one of three forms of Ethericity, a term that refers to those supra-normal, near nondimensional, energetic, bio-electric, bio-magnetic, catalytic, high-frequency, vibratory, super-potent entities of quasi-material, quasi-etheric nature belonging to the 4th and 5th dimensions of being. According to their function or location these may be male or female in nature. This is the turning or anomaly point out of which is born the creationof-motion from which in turn the self-enclathing motion-of-creation arises. This physical formation is the product of organic formative processes and it is obvious that in order to construct such physical forms, we must make use of certain basic shapes. This basic shape we find in the ellipse, which once set in motion, produces the mirror-image, opposite form.

Chapter 2 : Eco Performance Lift Trucks by Raymond | Energy Efficient Forklift Trucks

The energy evolution harnessing free energy from nature, the energy evolution, the final volume in the revolutionary eco technology series, contains radical environmentalist viktor schaubergers groundbreaking writings on methods for.

Although hard water is generally safe to use, it can cause a variety of problems related to cleaning and appliance life and efficiency. At EcoWater, we have what we believe is the best water softener guarantee on the market to help you win the battle against hard water. An EcoWater softener provides hard water treatment for your home by removing calcium, magnesium and sediment from the water. Once those hard water-producing elements are eliminated, your family will enjoy the benefits of soft water: Reduced build-up of film on tubs, sinks, faucets and wall tiles. Elimination of spotting on glassware, dishes and flatware caused by hard water. Elimination of hard water residue in fabrics, which can help clothing last longer. Preserve the life of your water using appliances such as washing machines, dishwashers and coffee makers. With all the home water purification systems – including salt-free water softeners – that are on the market, how do you decide what is right for your home? An authorized EcoWater Pro can diagnose your water and recommend the best option for your home. EcoWater offers home water softeners in a single tank cabinet style or a two-tank system. Which is right for your home? Consider the amount of space available for the system, plus the hardness of your water. Your EcoWater Pro can give you expert advice on the benefits of a single versus two-tank system based on the results of your water test. Two Tank System A two-tank system has a separate salt tank, and provides more options for the hard water capacity of the unit. It is highly recommended for either municipal or well water supplies. Highly Efficient Counter-Current Regeneration Water Meter – Allowing for chemical feed dosing, flow switch operation and water use information. Distributors exhibit excellent flow rates and are cleaned automatically by counter-current water pressure. Positive action helps prevent overfilling. Our integrated sensor will detect the salt level and alert you when the salt level is low. Features of the Compact Series water softener: Features of the ESD water softener: Patented Electronics Digital Demand Module – Sophisticated, yet easy-to-use electronics capture historical usage patterns to predict future needs for precise regenerations. Maintains time for at least 6 hours in case of power loss. Features of the ESD Series water softener: Time Keeper – Permanent program memory with capacitor-backed time retention. Self-Cleaning Distributors – Distributors exhibit excellent flow rates and are cleaned automatically by preventing clogging. Brine Valve – Controls water flow in and out of salt tank. Features automatic shut-off to prevent overfilling. Bypass Valve optional – Brass-free and lead-free bypass valve lets you manually bypass the system. Energy Efficient Power Supply – Simplifies installation, maintenance and reduces electrical hazards. Your EcoWater Pro will test your water to determine the right water treatment for your home. Features of the ESS Electronic Timer – Electronic timer controls regeneration frequency. Ability to Choose Media for Custom Applications – Ships without media to give flexibility in providing solutions for different problem water situations. Features of the EEC Series water softener: Patented Electronic Digital Demand Module - Solid-state electronics record usage patterns and control regeneration frequency based on predicted needs. Time Keeper - Permanent program memory with capacitor-backed time retention. Self-Cleaning Distributors - Distributors exhibit excellent flow rates and are cleaned automatically by countercurrent water pressure. Positive-Action Brine Valve - Snap-together construction eliminates use of solvents that may contaminate water. Optional Conditioner Shroud Kit - The EEC series conditioners are available with or without an optional shroud kit to cover the resin tank and controller assembly for appearance or weather protection. The image shows the product with the shroud kit option. I chose to rent a water softener from Tri County Water because I knew I would be getting a high quality softener at a very good monthly rate. I know of other companies that use cheap products for rentals, but I know for a fact that Tri County does not do that. They provide me with the best softener available on the market. I am continuing to rent my softener because I know I will not find a better rate from anyone and the

monthly payment is very affordable. I also appreciate knowing that if I need any service I can count on Tri County Water to provide the best service and I know they will be fast about responding if I have any needs. There are no local EcoWater Pros near your area. Please ensure your zip code is entered correctly or send us a general inquiry.
