Download Book Preface This book is a response to those instructors who feel that calculus textbooks are too big. In writing the book I asked myself: What is essential for a three-semester calculus course for scientists and engineers? The book is about two-thirds the size of my other calculus books Calculus, Seventh Edition and Calculus, Early Transcendentals, Seventh Edition and yet it contains almost all of the same topics. I have achieved relative brevity mainly by condensing the exposition and by putting some of the features on the website www. Here, in more detail are some of the ways I have reduced the bulk: In particular, chapter opening spreads and photographs have been eliminated. Additional examples are provided online. In addition, instructors have access to the archived problems on the website. Despite the reduced size of the book, there is still a modern flavor: Conceptual understanding and technology are not neglected, though they are not as prominent as in my other books. Most of them also come in single variable and multivariable versions. Early Transcendentals, Seventh Edition, has more complete coverage of calculus than the present book, with somewhat more examples and exercises. Early Transcendentals, Seventh Edition, in content and coverage except that all of the end-of-section exercises are available only in Enhanced WebAssign. The printed text includes all end-of-chapter review material. Early Transcendentals, Seventh Edition, except that the exponential, logarithmic, and inverse trigonometric functions are covered in the second semester. It is also available in a Hybrid Version. Concepts and Contexts, Fourth Edition, emphasizes conceptual understanding. The coverage of topics is not encyclopedic and the material on transcendental functions and on parametric equations is woven throughout the book instead of being treated in separate chapters. Early Vectors introduces vectors and vector functions in the first semester and integrates them throughout the book. It is suitable for students taking Engineering and Physics courses concurrently with calculus.
