"Find Anyone" is a multimedia information software package on CD-ROM for PC and MAC that will put the power of a private investigator right in your computer. Authored by 30 year P.I. veteran, John Woods, this CD-ROM will put his expertise and information resources at your fingertips, including online databases for people searching.

History[edit] American inventor James T. Russell has been credited with inventing the first system to record digital information on an optical transparent foil that is lit from behind by a high-power halogen lamp. Prototypes were developed by Philips and Sony independently in the late s. After their commercial release in , compact discs and their players were extremely popular. The unified design of the compact disc allowed consumers to purchase any disc or player from any company, and allowed the CD to dominate the at-home music market unchallenged. His team developed a digital PCM adaptor audio tape recorder using a Betamax video recorder in . After this, in the leap to storing digital audio on an optical disc was easily made. A week later, on 8 March, Philips publicly demonstrated a prototype of an optical digital audio disc at a press conference called "Philips Introduce Compact Disc" [21] in Eindhoven , Netherlands. Led by engineers Kees Schouhamer Immink and Toshitada Doi , the research pushed forward laser and optical disc technology. First published in , the standard was formally adopted by the IEC as an international standard in , with various amendments becoming part of the standard in . Philips coined the term compact disc in line with another audio product, the Compact Cassette , [18] and contributed the general manufacturing process , based on video LaserDisc technology. Philips also contributed eight-to-fourteen modulation EFM , which offers a certain resilience to defects such as scratches and fingerprints, while Sony contributed the error-correction method, CIRC. The Compact Disc Story, [16] told by a former member of the task force, gives background information on the many technical decisions made, including the choice of the sampling frequency, playing time, and disc diameter. The task force consisted of around four to eight persons, [10] [24] though according to Philips, the compact disc was "invented collectively by a large group of people working as a team. The new audio disc was enthusiastically received, especially in the early-adopting classical music and audiophile communities, and its handling quality received particular praise. As the price of players gradually came down, and with the introduction of the portable Discman the CD began to gain popularity in the larger popular and rock music markets. One of the first CD markets was devoted to reissuing popular music whose commercial potential was already proven. An advantage of the format was the ability to produce and market boxed sets and multi-volume collections. From its origins as a musical format, CDs have grown to encompass other applications. By the early s, the CD player had largely replaced the audio cassette player as standard equipment in new automobiles, with being the final model year for any car in the United States to have a factory-equipped cassette player. The demonstration showed that it is possible by using digital optical recording and playback to reproduce audio signals with superb stereo quality. This research at Philips established the technical standard for digital optical recording systems. Relevant discussion may be found on the talk page. The amount it pays you is controlled by a proprietary algorithm, which takes into account how many copies of an item are already in its warehouse, what the item sells for on Amazon or eBay, and how quickly it usually moves. Its two British co-founders officially launched a U. The magpie reference only works in the U. Lauter expects to reach profitability by the end of the year. All media must come with the original artwork. Otherwise, selling is simple. First, download the app. Your package arrives in a warehouse just north of Atlanta, where employees confirm that you sent what you promised. Honestly, people who are buying off of it right now must be masochists. When a disc is bought, Decluttr buffs it up and, if needed, replaces its jewel case. Inside the Decluttr warehouse. Photo courtesy of Decluttr For a world that supposedly stopped buying CDs, sales happen quickly. I sent in a box of 30 items in late February, and within its first day of arrival, the first CD was sold: Three weeks later, 12 more items had found new homes. This is the one opaque part of its process. So, what will happen to all those languishing copies of Jagged Little Pill? In a few months, Decluttr will have a solution: The margin is lower, but at least Decluttr can offload the junkiest of the junk. This already happens in the U. If the store prefers, Decluttr will even shrink-wrap its selections so that they look new. Decluttr is also seeking out new relationships with retailers overseas, particularly in parts of the world where physical CDs are more popular. CD sales dropped Lauter expects to do the same by
