I use the text book assessment because it uses the vocabulary from our district benchmark tests and state test. I use it as a tool to help my students see one way of doing the math. The assessment I analyzed is the Chapter 1 test for Place Value. I started the lesson with an inclusion question about strategies on taking multiple choice test. I prefer to not have an assessment where the students can guess, work backwards or use the process of elimination to find the correct answer. This does not show my students mathematical thinking. But for this one I am using the text book test where there are multiple choice answers on the Student Test. I have the students take the test, I grade the test and then create a chart of missed questions. I put the problems that were missed the most often into a PowerPoint slide show and use them for discussion questions. Each student will receive their test back to make corrections and then to return it to me. I will conference individually with each student asking "Where was your mistake and how did you correct it? In this activity the reflection is the lesson. Student are reflecting on what they have learned while taking the test, making corrections and conferencing with me and again when we go over the PowerPoint questions. If a student did well on the test I would have them connect this to a real world activity by asking them "Where could you use this outside of school? It was a great read to help teachers support student skills in the Common Core. This is an activity that should last 5 minutes but as I know the first couple of times I introduce something new it is going to take longer - I have to develop the process. In the book Leinwand wrote teachers should give a math question or four and have students answer the questions in 5 minutes as an assessment. I changed it to focus on review of math concepts, especially number sense, and not an assessment but as an avenue for discourse MP6. In the picture there are three days worth of 5 Minute Math work. The first day I put up the number 5, and asked my students to tell me what they know about the number. The next day I asked them to round 76, to the nearest ten thousand and then I recorded the answers. You might also like the way I hung the chart paper - I should post this on Pinterest: I had rings in the pads of paper and used to hang them from my whiteboard but needed the space. I hooked the rings to a plastic hanger and I can now hang it almost anywhere in the room to have it on continual display.
