

Chapter 1 : Oxford Handbooks - Scholarly Research Reviews

A Handbook of Medical Climatology: Embodying Its Principles and Therapeutic Application With Scientific Data of the Chief Health Resorts of the World (Classic Reprint) Paperback - May 7, by S. Edwin Solly (Author).

Gray, and Richard Tarasofsky Oxford Handbooks Description Climate change presents one of the greatest challenges of our time, and has become one of the defining issues of the twenty-first century. The radical changes which both developed and developing countries will need to make, in economic and in legal terms, to respond to climate change are unprecedented. International law, including treaty regimes, institutions, and customary international law, needs to address the myriad challenges and consequences of climate change, including variations in the weather patterns, sea level rise, and the resulting migration of peoples. The Oxford Handbook of International Climate Change Law provides an unprecedented and authoritative overview of all aspects of international climate change law as it currently stands, with guidance for how it should develop in the future. Over forty leading scholars and practitioners set out a comprehensive understanding of the legal issues that surround this vitally important but still emerging area of international law. This book addresses the major legal dimensions of the problems caused by climate change: After an introduction to the field, the Handbook assesses the relevant institutions, the key applicable principles of international law, the international mitigation regime and its consequences, and climate change litigation, before providing perspectives focused upon specific countries or regions. The Handbook will be an invaluable resource for scholars, students, and practitioners of international climate change law. It provides readers with diverse perspectives, bringing together interpretations from different disciplines, countries, and cultures. Gray, and Richard Tarasofsky 2. In choosing a health-resort for a given case it is not sufficient to select a locality the merits of which have been most loudly and persistently exploited by its advocates. That which the investigator discovers to be at once his chief necessity and his chief difficulty is the institution of a close.
