Sign up Log in Full file at <https://www.stuvia.com/doc/1000000/human-anatomy-5th-edition-mckinley>: The early anatomist known as the "Prince of Physicians" was A. List the contributions of early scientists to the field of human anatomy. Scope of anatomy and physiology 2. The artist who used dissections to improve his drawings and paintings was A. No reproduction or distribution without the prior written consent of McGraw-Hill Education. Full file at <https://www.stuvia.com/doc/1000000/human-anatomy-5th-edition-mckinley>: Anatomy is the study of A. Module A05 Basic terminology. Explain how anatomy differs from physiology. Scope of anatomy and physiology 4. The scientific discipline that studies the function of body structures is A. Scope of anatomy and physiology 5. Gross anatomy refers to the study of A. The anatomic changes that result from disease are studied under A. Define gross anatomy and compare and contrast its subdisciplines. Scope of anatomy and physiology 7. Molecules are formed from two or more A. Module A06 Levels of organization. Identify the major levels of organization in the human body. Which organizational level consists of related organs that work to achieve a common function? Organ system level B. Levels of organization 9. At what level of organization is a tooth? The term that refers to the ability of organisms to respond to a stimulus is A. Describe the characteristics of life. Levels of organization The smallest structural unit that exhibits the characteristics of living things is A. The various chemical reactions that organisms carry out are collectively called A. Module A07 Survey of body systems. Identify the 11 organ systems of the body and their major organs. Survey of body systems Which describes the anatomic position? The body is upright. Palms are facing forward. Thumbs point away from the body. Feet are flat on the floor. All of the choices are correct. Module A01 Anatomical position. Demonstrate the anatomic position and explain its significance. Module A02 Body planes and sections. Use correct terminology to define the three common anatomic planes. A plane that passes through the structure at an angle is called A. Body planes and sections Which best defines "superficial"? On the inside B. On the outside C. Toward the end of an appendage D. Close to the attachment of the appendage to the trunk E. Module A04 Directional terms. Compare and contrast the proper terms to describe directions in the body. The directional term that means "away from the midline of the body" is A. The directional term that means "closest to the point of attachment to the trunk" is A. The directional term that means "in back of or toward the back surface" is A. The best term for referring to the rear or tail end is A. Module A03 Body cavities and regions. Define the terms that describe major regions of the body. Explain the terms that identify the body cavities and their subdivisions. The cranial cavity houses the A. Body cavities and regions The bones of the vertebral column form a cavity called the A. None of the choices is correct. The anatomic term for the cheek is A. Identify the nine regions and four quadrants of the abdominopelvic cavity. The best view of the popliteal region is seen from the A. The anatomic term for the foot is A. The anatomic term for the wrist region is A. The primary function of serous fluid is to A. The anatomic term for the calf is A. The term "hallux" refers to the A. The anatomic term for the hip region is A. A piercing in the umbilical region would be found on the A. A professional fighter hit in the mental region might have damage to the A. Pollex refers to the A. A digit may refer to A. An inguinal hernia is in the region of the A. Which is a physiological description rather than an anatomical one? The muscles of the intestinal wall contract slowly and involuntarily. The walls of blood capillaries are composed of a thin epithelium. The muscles of the thigh are composed of skeletal muscle tissue. There are fenestrations openings between the epithelial cells in capillary walls. The esophageal wall includes a middle layer of dense irregular connective tissue. Scope of anatomy and physiology Which serous membrane covers the external surface of an organ? The parietal layer B. The visceral layer C. The muscle layer D. The dorsal layer E. The limbs of the body are attached to the axis and make up the A. The median space in the thoracic cavity is called the A. Which is not found in the mediastinum? The pericardium is a two-layered serous membrane that A. The moist, two-layered serous membrane that lines the abdominopelvic cavity is called the A. Of the abdominopelvic regions, the one that is the superior of the middle column is

## DOWNLOAD PDF HUMAN ANATOMY 5TH EDITION MCKINLEY

called the A. Which abdominopelvic regions have both a right and left side? Lumbar and iliac B. Hypogastric and hypochondriac C. Hypochondriac, lumbar, and hypogastric D. Iliac and hypochondriac E.

### Chapter 2 : Human Anatomy, 5th Edition - McKinley et al. - eTextBook

*Human Anatomy - Kindle edition by Michael McKinley. Download it once and read it on your Kindle device, PC, phones or tablets. Use features like bookmarks, note taking and highlighting while reading Human Anatomy.*

### Chapter 3 : Human Anatomy 5th edition PDF - Medical books free download
