And also should provide awareness to the visitors about micro insurance through articles. If the user registered insurance policy to this website, it will process that registration form by verification and immediately give the temporary policy holder ID to the user. The web site provides easy links for easy navigation in the site. After submission of registration form the admin will process to verify that particular details registered by the customer and sanctioned the insurance policy. The developed system should allow admin users to register insured persons with their name, date of birth, residence address, medical history and also policy details. Then the admin send the permanent policy holder ID and password to the customer and also send status information about insurance policy to the corresponding policy holder. Due to dynamic nature of features, the members, Admin members should be able to understand the provided facilities. An online help documentation will be provided to help the users and visitors in using the facilities. Existing insurance management System: The existing system is the manual system. The manual system is prone to error. It is time consuming. It is difficult to search for a data Most of the insurance organizations are not having any existing fully computerized system. It is very difficult for a person to produce the report. There are chances for changing the scheme report and do malpractice. This system involves a lot of manual entries with the applications to perform the desired task. Every member organization has its own data structure. Usage of papers in the payment process leads to less efficiency, less accuracy and less productivity. Due to lack of centralized data structure, it is very difficult to merge the data to analyze the statistics Proposed insurance management System: The proposed system is for making easier to manage policy holder details, agent details, policy details, claimant details and payment details. The proposed system is designed to eliminate the drawbacks of the existing system. It is designed by keeping to eliminate the drawbacks of the present system in order to provide a permanent solution to the problems. The primary aim of the new system is to speedup transactions. This insurance management system will be developed for managing the insurance management system. The overall system is control through the main menu. The report is prepared for the schemes and implemented by the concerned officials. Since the advent of Online Insurance services in the Middle Ages Policy Agents and policy Holder have used paper-based instrument to move money between Insurance transactions. It comes as no surprise to one that when everything is being converted to computerize. Already the business has to global with the coming of Internet. Now, no more the individual aims at the local market is also just a click of button away. In this fast
