KEURIG K Brewing System User Manual - The Keurig K Brewing System has a quick and easy way to make coffee. Brewer is very nice. Brewer is very nice. K-cups are marked with the corresponding seal.

Amount of Coffee Per Serving These machines offer 10 brew sizes, including the 2, 6 and ounce brews that require the carafe. Cup sizes when brewing from K-Cups are 4, 6, 8 and 10 ounces. Vue packs allow you to brew larger cups of 12, 14 and 16 ounces. K-Carafe packs produce 2, 6 and 10 ounce carafes. **Types of Coffee Used** For 4, 6, 8 and 10 ounce cups, use K-Cups made after July with the special encoding in the lids, which some retailers may not yet stock look for the Keurig logo on the lid. Larger cup sizes (12, 14 and 16 ounce) require Vue packs, which are gradually being converted over to work in the 2. Look for a large dot in the 9 o'clock position on the lid. K-Carafe packs are required for brewing small carafes of coffee. Currently, 10 flavors are available. Vue packs and K-Carafe packs can be recycled after certain parts are removed. **Type of Coffee Produced** K-Cups are available in a huge variety of roasts and flavors, and from many popular coffee brands. Vue packs and Carafe packs have a much smaller selections to choose from. **Multi-Purpose Options** If no K-Cup or K-Carafe is in place, the machines will produce hot water for use in making hot chocolate, tea, other hot beverages, oatmeal, soup mixes, etc. The K has a button that dispenses hot water while held down, while the other models produce hot water when brewing without a coffee pod in place. The water filter will improve the flavor of off-tasting water, producing better tasting coffee. The optional Water Filter Kit included with the K, K and K can improve the taste of the water but will not remove minerals that can collect on the inside of the machine. The manufacturer recommends not using softened water, overly hard water, distilled or reverse osmosis water. Keep in mind that mineral deposits, which can affect brewing performance, are likely to build up in the machine, regardless of what water you use. Descaling removes these deposits and helps conserve internal parts such as heating elements. **Brewing Time** It takes about a minute to brew a cup of coffee and up to 3 minutes to brew a carafe. **Ongoing Cost** Most users feel that the convenience of K-Cups, Vue packs and K-Carafe packs makes them worth the extra cost over ground coffee. **Controls** All programming options are handled via the easy-to-use touch screen black and white for the K, colored for the K, and a larger colored screen for the K The Power Button icon is located in the bottom right corner of the touch screen. It will appear once the brewer has been plugged in. **Coffee-Making Process** To brew a single cup of coffee, place a mug in the drip tray which can be removed to accommodate taller mugs. Lift the lid by the handle and place the selected K-Cup or Vue pack in the holder. Close the lid by lowering the handle. To brew a carafe, remove the drip tray and position the carafe under the nozzle. Select a K-Carafe pack and insert it into the holder and close the lid. If you remove the carafe before the brewer is finished, the brewing process will stop, and start again from the beginning of the brewing process not where it left off when the carafe is put back in place. For some flavors and settings the coffee may exit in a pulsing rather than steady stream. Remove and empty the drip tray, but be careful, quite a bit of liquid can accumulate there. Clean the water reservoir and lid once a week. Remove the reservoir and the water filter, if installed, and empty and wipe down the reservoir and lid with a damp non-abrasive cloth. Do not put any 2. Clean the carafe after every use by removing the lid and emptying it. Wipe it out with a soft, lint-free cloth, then rinse it thoroughly. Do not put the carafe in the dishwasher. Follow the instructions in this video to descale: If the brewer is not performing as it should you may need to clean the exit needles, entrance needles and diffuser as shown in this video: Empty the water reservoir before storing. **Choice of 10 brew sizes.** Large water reservoir that can be filled at the sink. Program brewing start time for carafes. Removable drip tray for tall mugs. Easy to read touchscreen with clock. Choose English, Spanish or French language touchscreen. UL rated for Household Use Only. **Warranty** This machine has a one-year warranty against defects under normal home use in the U. **Customer Service** The manufacturer can be reached by phone 7 days a week and any time by email. Refunds and replacements are handled by the seller. Keep in mind that the warranty will be voided if you open up the machine to try to diagnose a problem or fix it yourself. Chapter 2 : Keurig K User Guide

Well, we have defined model of your device here. So just look at the list and choose manual for Keurig Brewers K On the next page you will be able to read or download PDF file.

Brews single cups and carafes. Cons Only works with new, Keurig-branded cups. Splashes a bit when brewing. Bottom Line The Keurig 2. A nice, warm cup of coffee is a great way to wake up in the morning. The problem is, with so many single cup brewers making themselves at home on kitchen counters, brewing enough coffee for everyone sometimes seems like it can last as long as dinner itself. The K has a smaller ounce water reservoir, lacks a programmable clock, hot water on demand, and features a monochrome touch display. The K, meanwhile, has a smaller ounce water reservoir and lacks hot water on demand. View All 7 Photos in Gallery One very important thing to keep in mind: New, compatible cups are marked by a circular ring on top, around the brand logo that tells you what kind of cup it is. The brewer reads this information, and lets you get down to brewing. It looks very much similar to the Platinum Plus Brewing System, the main difference being a 2. The brewer is made from different shades of black and gray plastic, with some silver trim around the top. The removable base doubles as a drip tray that can accumulate up to 8 ounces of overflow. At just over 12 inches tall, and nearly as deep and as wide, also keep in mind the K occupies a decent amount of counter real estate. After that, all you have to do is put a K-Cup or K-Carafe in the pack holder, close the lid, and select how you want it to brew. After putting in a compatible pack and closing the pack holder, the display will automatically populate with brewing choices. Keurig claims its new 2. This would be a great way for Keurig to set itself apart from the competition, but in practice, it made no discernible difference. For instance, I brewed coffee, tea, iced tea, iced coffee, and hot cocoa using the K But no matter the K-Cup, the machine always presents you with the same brewing options. The machine automatically adjusts the temperature when brewing a carafe, from degrees Fahrenheit to degrees. For a regular 8-ounce K-Cup, the K took 43 seconds to brew. For a strong cup, that number increased to 1 minute and 15 seconds. K-Carafe brewing options are measured in cups. And the carafe feature is a very welcome addition. The K comes with a black plastic carafe with a silver handle. In order to brew a carafe, you must remove the drip tray and put the carafe in its place, which fits up against the brewer like a glove. The lid felt secure while pouring, and in general, coffee brewed in the carafe tasted comparable with a single serving cup. But stick to the default cup setting and you should be happy. The K also allows you to brew hot water, either by selecting the setting on the display, or by opening and closing the pack holder. All in all, though, the K is great when you want a quick cup or carafe of coffee with minimal work. The beverages it brews taste mostly similar to previous models, which is either a good or bad thing depending on how you like your coffee. The K offers a number of additional features, like the ability to set the machine for brewing in high altitude, or provide you with reminders to clean the water filter. You can also program the light color for the reservoir tank, and change the wallpaper on the display. But if you enjoy the controlled simplicity of single-serve brewing, and want the ability to brew a pot of coffee just as easily, the Keurig 2.

Most of the posts and reviews on the new Keurig 2. An ad for the machine. A rant about the new DRM approach being employed by Keurig. A rant about why you should be using insert another brand coffee maker here or a french press. It is intended to provide some additional information to those considering a Keurig 2. Many of the posts and reviews describe three models: These model numbers appear based on the early descriptions and ads from Keurig, and were also used by a number of stores when preparing their websites for preorders. However, about a week prior to the actual release of the machines, Keurig updated their site and stores scrambled to make adjustments. The actual model numbers of the released machines are K, K, and K As far as I know, there is no difference in the features of the machine; they just went with a different model number for some reason. In other words, the K was released as the K, and so on. The other main topic covered is the availability of new K-carafe packs to brew a carafe of coffee. However, an often overlooked feature of the Keurig 2. One question I had prior to purchasing the brewer was this: Turns out the K2. When you put the larger-diameter Vue cup in the machine, the lower needle swings out of position. When a K-cup is inserted, the second top needle lies outside the edge of the cup. Right now, there is a mix of older K2. Hopefully, this will only improve over time, but for now here are a few things to look for, both on the cup itself and on the box. K-cup compatible with Keurig 2. Do not mistake the classic dark brown circular Keurig Brewed logo, which also appears on the cups, as an indicator that the cup will work in a K2. This logo appears on older cups as well. It is the pale ring you are looking for. If your K-cup is missing this ring, the K2. But there may be a workaround, keep reading. For use in all Keurig K-cup brewers So far, it does not appear that boxes of K-cups are clearly marked as supporting K2. However, older boxes are often marked as being incompatible with Vue machines, which means the box was likely produced prior to the inception of the K2. Vue cup compatible with Keurig 2. These older cups are similarly incompatible with the new K2. More on the settings in a minute. Use Old Vue Cups in your K2. Well, there is a simple workaround that will allow you to brew an older Vue cup in your new machine. This is one reason why this trick is easier with Vue cups; K-cups are really meant to be taken apart. The latte frother Vue cups work well for this because after you use them, there is nothing left in the cup. Probably a good idea to rinse and dry the label too. Next, I recommend cutting off part of the label. The objective is to keep both the DRM dot and the tab at the top while removing the foil from the areas where the needles will be inserted. This may not be necessary, but it reduces the chance of problems and lets you reuse the same label more than once. Lay the modified label on your incompatible Vue cup. Next, lay the modified label on top of your old-style Vue cup and hook the tab over the edge to help align the label and hold it in place. This is another reason why this is easier with a Vue cup; the K-cup does not have the convenient tab. You might be able to accomplish something similar with a piece of tape, but that could lead to unforeseen complications. The Vue cup should fit snugly into the chamber. Finally, insert the cup into the brewer. Pulling down on this tab makes room for a Vue cup; it also moves the bottom needle out of position. Pull down on the tab and insert the cup. Press gently and the entire rim of the chamber will expand slightly, allowing the Vue cup to fit easily but snugly into position. If the tab on the label is hooked over the edge, the rim of the chamber will also help hold the label in position. This is yet another reason why this is more difficult with a K-cup, as they do not fit into the chamber in the same way. Now simply pull down on the lever to close the machine, which should recognize the cup as K2. K-Carafe packs, which are essentially just tall Vue cups, use setting 1 purple. Normal coffee Vue cups use setting 4 brown. Each setting has a corresponding range of brew sizes, and the standard 4 setting for coffee tops out at 10 oz. Just keep in mind the strength of the coffee may be affected. When selecting 5 you will be directed to insert the frother cup first, which produces 4 oz. You are then told to insert the coffee cup, and the setting defaults to a Strong brew, also like the Vue brewers. However, while my home Vue brewer allows me to increase the brew size to 6 oz. Simply touch one of the arrows by the 5 and select a new setting.
