

### Chapter 1 : Mapping the Beast by Jeff VanderMeer - FictionDB

*Mapping the Beast* collects the best fiction from the landmark anthology series *Leviathan* and its sister publication *Album* [blog.quintoapp.com](http://blog.quintoapp.com) the mids to the mids, *Leviathan* provided confrontational, sometimes controversial surreal short stories, and helped chart the limits of fantasy fiction.

Feed The Beast was originally created as a custom challenge map , developed by a small team led by Slowpoke. It was announced on February 24th, on the Minecraft Forums [1]. The map was a Sky Block map; the player spawned on a small platform in a void world, and must overcome a series of challenges. Using the tech mods in the modpack, these goals will automatically checked and were rewarded. The map was adapted to allow multiple players to compete against each other in a race to complete the objectives. This version gained large popularity after being live-streamed on Twitch. After the map was released, the FTB Team decided to simplify the installation of the modpack by creating a launcher to automatically distribute the map, mods and configuration for those interested in playing it. The map went through various iterations, including the bedrock map - known for the challenge and reward structure made of bedrock. However most players that refer to the "FTB map" mean the pyramid map, known for its large basalt pyramid that included various rooms that listed a set of items the player had to create in order to solve each challenge. That version was then updated to a harder version, known as FTB Insanity, which took many players 50 to even over hours of play time to fully complete. After hearing about many players using the modpack without playing the modpack, Slowpoke announced the creation of a new, general kitchensink modpack on August 13th, with a post on the Minecraft Forums [2]. The modpack was centered around mods built using Minecraft Forge. It initially focused on mods of a technical theme, such as IndustrialCraft 2 , BuildCraft , and RedPower 2 , but it expanded to include magic mods like Thaumcraft 3 and Mystcraft. The initial mod pack was released as a beta in November It stayed in beta status for some time because of the necessity for mod authors to update their mods to Minecraft version 1. This process proved a long road for a few of the mods that were core to the pack. Other versions of the FTB modpack were created, including a Lite version, which slimmed down the list of mods to assist new users learn the ins and outs without being overwhelmed. A Magic World version, which focused on mods of a magical nature, was also released. Many recent FTB modpacks include built-in quests with Hardcore Questing Mode , and some focus on other themes and difficulties. The number of downloads initially overwhelmed the server, leaving many users frustrated. After resolving the server issues, a beta version was released. The first production release also suffered from the sheer number of downloads, but the issues were shortly resolved. The main features of the launcher were: It automatically downloaded a list of FTB modpacks and approved 3rd party modpacks. It automatically downloaded all mod installation files and creation of the minecraft instance. It had full distribution support from all developers of the mods included in the pack. It had a planned set of config files, assigning unique ids to all mod blocks, preventing overlaps that cause Minecraft to crash and were the frequent bane of users trying to manually install mods. It automatically downloaded featured and 3rd party maps, such as the Feed the Beast challenge map. It supported downloading of pre-configured server instances, making it very easy for admins to host the mods on a server. It automatically downloaded featured and 3rd party texture packs. The Twitch Desktop App allows for easier modpack creation, configuration and usage, although it is in beta. However, as the application currently does not support Linux , the FTB Launcher is still supported, but it is deprecated.
