

Chapter 1 : Mary D. Sheridan (Author of From Birth to Five Years)

From Birth to Five Years, based on the pioneering work of Mary Sheridan, is widely regarded as the go-to reference for health, education and social care professionals, or anyone concerned with the developmental progress of pre-school children.

From an early age she displayed an interest in medicine and was fortunate enough to obtain a scholarship to the University of Liverpool School of Medicine where she graduated with honours in . Among a number of her distinguished contemporaries was Dr. Henry later Lord Cohen of Birkenhead who became a lifelong friend and supporter of her work. Sheridan chose to pursue a career in paediatrics. Liverpool University was one of the first to admit women as medical students, however prejudice against women doctors was still strong and this fuelled Dr. She started her career in the relatively humble job of assistant school medical officer in Manchester. Here she first encountered the gross deprivation in the health, housing and education of many children from the poorer areas of the city. She was disturbed to find that the schooling of these children was being hampered by the late diagnosis of hearing, speech and visual handicaps. She soon saw that in order to be able to recognize the earliest symptoms and signs of these conditions, it was essential to be thoroughly familiar with developmental progress in infancy and early childhood and more particularly with the range of normality. Sheridan was particularly concerned about speech and language delay in the young child and how this was affected by poor hearing. She had always been interested in literature and drama and was proud of her descent from Richard Brinsley Sheridan, the famous 18th. Encouraged by William Armstrong, the dynamic director of the Liverpool repertory theatre, she wrote and had successfully performed at the rep. Her expertise in the field of developmental paediatrics was recognized by Dr. These were illustrated with line drawings based on the many photographs Dr. Sheridan took of children in clinics or at play. To facilitate early diagnosis Dr. Her publications on child development updated to include more recent research are still widely used to train doctors, nurses and health visitors in clinics and hospitals. An inspiring teacher, Dr. Sheridan retired from the Department of Health in the importance of her work being recognized by the award of an OBE. Her outstanding contribution to the field of developmental paediatrics was recognized by the award of the James Spence medal of the British Paediatric Association in . Although her mobility was increasingly hampered by arthritis, Dr. Sheridan continued to be active and traveled extensively. It was shortly after giving a lecture in her beloved Dublin in that she collapsed and died at home of a sudden myocardial infarct. Sheridan is recalled by the founding of a number of child developmental centres in her name-the first of which was at Guys Hospital. While outwardly somewhat forbidding in manner, Dr. Sheridan was a kindly woman , whom children trusted completely. She encouraged many including your contributor to pursue a medical, particularly paediatric, career. A doughty feminist she particularly championed the role of women in medicine. If there is someone you would like to recognise for their contribution to medicine or healthcare, please call Paul Summerfield on or email paul. He took great pride in his work, recognising the importance these inscriptions have for families, friends and colleagues. Alan was the ideal sign-writer " accurate, reliable, punctual and easy to get on with. He is much missed. Each person honoured also had also been given a dedicated web page, so family and friends can continue to share memories and photos.
