Chapter 2 : - Motor Control and Learning: A Behavioral Emphasis by Richard; Lee, Tim Schmidt

Significantly updated with current research, new learning features, and more references, the fifth edition of Motor Control and Learning: A Behavioral Approach expertly combines text, figures, and practical examples to explain this complex topic in a clear and comprehensive manner.

Audiences A text for graduate and upper-level undergraduate courses in motor control and learning. Also a reference for academic libraries and professionals working in human movement fields. Schmidt, PhD, passed away in , leaving a legacy of groundbreaking research in motor control and learning. He had authored the first edition of Motor Control and Learning in ; followed up with a second edition of the popular text in ; and collaborated with Timothy Lee for the third edition in , the fourth edition in , and the fifth edition in . Schmidt was a professor emeritus in the department of psychology at UCLA and ran a consulting firm, Human Performance Research, working in the areas of human factors and human performance. The originator of schema theory, Schmidt founded the Journal of Motor Behavior in and was editor for 11 years. Schmidt received two honorary doctorate degrees, from Catholic University of Leuven Belgium and Joseph Fournier University France , in recognition of his work. He has published extensively in motor behavior and psychology journals since , served as an editor for the Journal of Motor Behavior and Research Quarterly for Exercise and Sport, and has been an editorial board member for Psychological Review. Until his retirement in , his research was supported primarily by grants from the Natural Sciences and Engineering Research Council of Canada. In his leisure time, Lee enjoys playing golf. He has maintained a lifelong fascination with blues music and would one day love to put years of motor learning study into practice by learning to play blues guitar. Winstein, PhD, PT, is a professor of biokinesiology and physical therapy at the University of Southern California, as well as in the department of neurology at the Keck School of Medicine. She has more than 30 years of multidisciplinary collaborative research experience focused on understanding rehabilitation outcomes and promoting optimal recovery of goal-directed movement behaviors that emerge from a dynamic brain-behavior system in brain-damaged conditions. She has authored or coauthored more than research papers, chapters, proceedings, and commentaries. Recently, the Journal of the American Medical Association published the results of her NIH-funded, multisite clinical trial of stroke rehabilitation. Winstein has mentored over a dozen doctoral students and postdoctoral scholars from diverse fields, including engineering, neuroscience, and rehabilitation. Her research has resulted in approximately journal articles and book chapters, as well as two books. In her leisure time, Wulf enjoys golf, tennis, skiing, and photography. Zelaznik, PhD, is a professor of health and kinesiology at Purdue University. Zelaznik has served as executive editor for the Journal of Motor Behavior. His research specialty is human motor control. Over the past 15 years, Zelaznik has developed, tested, and promoted a theoretical framework to examine issues in human movement timing. A former college tennis player, Zelaznik is still an active albeit unranked tennis player. He is an active road cyclist and former marathon runner. As his students continually tell him, he does not have a good sense of humor, although he loves to laugh. I found part III the most thought-provoking and applicable to my practice of physical therapy, particularly chapter 10, which discusses how conditions of practice influence motor learning. The book comprehensively examines human movement and performance. Includes a sample syllabus and sample answers to learning activities that accompany the narratives in the student web resource. Includes over figures, photos, and tables from the textâ€”sorted by chapterâ€”to provide instructors with flexibility when creating their own customized presentations, handouts, and other course resources. The narratives align with the book chapters and provide applications for students to analyze and research.
