Nevertheless, misunderstanding of the unique nature and implications of mental retardation remains widespread. When a person with mental retardation confronts the criminal justice system, they are uniquely unable to take advantage of legal safeguards and to protect their constitutional rights. What is mental retardation? Mental retardation is a lifelong condition of impaired or incomplete mental development. According to the most widely used definition of mental retardation, it is characterized by three criteria: Subaverage intellectual functioning Intelligence quotient I. The vast majority of people in the United States have I. To be diagnosed as having mental retardation, a person must have an I. If a person scores below 70 on a properly administered and scored I. Although all persons with mental retardation have significantly impaired mental development, their intellectual level can vary considerably. An estimated 89 percent of all people with retardation have I. That is, he cannot perform intellectual tasks beyond the capacity of a typical ten-year-old. According to a psychologist who evaluated Mata, "his ability to express himself and his ability to recognize the meaning of common words were at the level of a nine- to ten-year-old child He lacked basic understanding of familiar processes. He did not know the function of the stomach, where the sun sets, nor why stamps are needed on letters Arithmetic abilities were limited to addition and subtraction with the help of concrete aids such as fingers. Limitations in adaptive skills Mental retardation entails significant limitations in two or more of the basic skill areas necessary to cope with the requirements of everyday life, e. He or she may have trouble sitting or standing still, or may smile constantly and inappropriately. Limitations in everyday coping skills may be more or less severe, ranging from individuals who can live alone with intermittent support, to individuals who require extensive hands-on assistance and guidance, to individuals who require constant supervision and care. For most people with mental retardation, limited adaptive skills make ordinary life extremely difficult unless a caring family or social support system exists to provide assistance and structure. Offenders with mental retardation who have been convicted of committing capital crimes typically grew up poor and without networks of special support and services -- often without even a supportive, loving family. They functioned as best they could without professional assistance, often required to fend for themselves while still teenagers. If they were able to work, it was at basic menial tasks. After being hired as a kitchen dishwasher he was fired when he could not learn to operate the dishwasher. Family members reported that "if one told Billy exactly what to do and took him to the place where it was to be done [he] could do some work. If he were left on his own and not specifically guided, he could not do it. It can be caused by any condition which impairs development of the brain before, during, or after birth. The causes are numerous: Many psychiatrists argue that the age before which signs of retardation must become manifest should be raised from eighteen to twenty-two, to reflect the difficulties in obtaining accurate age records for many people with this disability and the differing rates at which people develop. An adult may, for reasons related to accident or illness, suffer a catastrophic loss in intellectual functioning and adaptive skills, but this would not make him or her "mentally retarded," since by definition mental retardation starts during childhood. One implication of this is that mental retardation is virtually impossible for an adult to fake: Early diagnosis can help the person with mental retardation obtain access to appropriate special education, training, clinical programs, and social services during important developmental years -- as well as through life. With help from family, social workers, teachers, and friends, many mentally retarded people succeed in simple jobs, maintain their own households, marry, and give birth to children of normal intelligence. There is no "cure" for mental retardation. Unless their cognitive impairment is unusually severe e. Many capital offenders with mental retardation did not have their condition diagnosed until trial or during post-conviction proceedings. A person with mental retardation, according to one expert, "is always the least smart person in any group. This leads to fear, dependence and an experience of terrible stigma and devaluation. They may wrap themselves in a "cloak of competence," hiding their disability even from those who want to help them, including their lawyers. Cruz

nonetheless insisted to reporters that, although he was perhaps "slow in reading, slow in learning," he was not mentally retarded. He had gone through much of his schooling allowing his younger sister to complete his homework for him. When he was given papers to read in connection to his case, he would carefully stare at them. He lied about finishing high school. He was actually in special education classes and did not finish the sixth grade. He was drafted into the army and discharged because of his mental retardation. He lied about his service record. He often made things up so that people would not suspect mental retardation. But, as the late U. S. Supreme Court has said, "A person with mental retardation will have limitations of a greater or lesser extent in every aspect of cognitive functioning. He or she will have limited abilities to learn including reading, writing, and arithmetic and to reason, plan, understand, judge, and discriminate. Mental retardation truncates the capacity to think about intended actions, to consider their possible consequences, and to exercise restraint. One expert has summarized the attributes of mental retardation as follows: Almost uniformly, individuals with mental retardation have grave difficulties in language and communication. They have problems with attention, memory, intellectual rigidity, and in moral development or moral understanding. They are susceptible to suggestion and readily acquiesce to other adults or authority figures. People with mental retardation have limited knowledge because their impaired intelligence has prevented them from learning very much. They also have grave problems in logic, foresight, planning, strategic thinking, and understanding consequences. But while children will outgrow these limitations as their brains develop and mature, people with mental retardation will not. While most defendants with mental retardation who have committed a crime know they have done something wrong, they often cannot explain why the act was wrong. Before his execution, Mason asked one of his legal advisors for advice on what to wear to his funeral. At his clemency hearing, the chair of the Louisiana pardons board asked Sawyer if he knew what murder was. Eager to be accepted and eager to please, people with mental retardation are characteristically highly suggestible. Washington was so suggestible and eager to please, according to a former employer, that "you could get [him] to confess that he walked on the moon. Their inappropriate social responses can be misinterpreted by people who do not know they have mental retardation or who do not understand the nature of retardation. They may act in ways that seem suspicious, even when they have done nothing wrong. When questioned by police or other authority figures, they often smile inappropriately, fail to remain still when ordered to do so, or act agitated and furtive when they should be calm and polite. Others may fall asleep at the wrong moment. Welcome has mental retardation and, according to psychiatric testimony presented at his trial, has a mental age of eight. He smiled incessantly during his capital murder trial, an almost involuntary defense mechanism developed in response to a lifetime of taunts. As his defense attorney noted, "Many people with retardation smile a lot. They are anxious for approval, and have learned that smiling is one way to get [it]. He was sentenced to death and remains today on death row. Trial counsel were not aware that they had mental retardation. But their tendency to sleep peacefully during their trials helped alert post-conviction lawyers to their mental disability. In the case of White, who snored loudly during the penalty phase of his trial, the prosecutor argued that his conduct indicated his lack of remorse for his crime and his lack of respect for the criminal justice system. Both Fairchild and White were sentenced to death and executed. Although people with mental retardation constitute somewhere between 2 and 3 percent of the population, they are overrepresented in the prison population. It may also be that some of the people with mental retardation who are serving prison sentences are innocent, but they confessed to crimes they did not commit because of their characteristic suggestibility and desire to please authority figures. See Section IV below. As with people of normal intelligence, many factors can prompt people with mental retardation to commit crimes, including unique personal experiences, poverty, environmental influences and individual characteristics. Attributes common to mental retardation may, in particular cases, also contribute to criminal behavior. The very vulnerabilities that cause problems for people with mental retardation in the most routine daily interactions can, at times, lead to tragic violence. Many people with mental retardation are picked upon, victimized and humiliated because of their disability. The desire for approval and acceptance and the need for protection can lead a person with mental retardation to do whatever others tell him. People with mental retardation can fall prey when people with greater intelligence decide to take advantage of them, and they become the unwitting tools of others. They are usually dependent. They are never the ringleader or the leader of a gang. One day his drug dealer

"friends" gave Joe a gun and instructed him to go into a store and take money from the clerk. He shot the guy and forgot to rob the store. We told him that he would have to change. We taught him how to steal. They may not be able to predict the consequences of their acts or resist a strong emotional response. For example, William Smith, I. When Dan resisted, Smith panicked and lashed out, killing him. As a result, they make good "fall guys" for more sophisticated criminals. A suspect with mental retardation is also less likely to know how to avoid incriminating himself, hire a lawyer and negotiate a plea. Multiple Vulnerabilities Many, if not most, of the people with mental retardation convicted of capital murder are doubly and triply disadvantaged. Not surprisingly, the mentally retarded people who become enmeshed in the criminal justice system usually share one or more of these characteristics: While the relationship between abuse and adult behavior is complex, "strong evidence exists that a person who was abused as a child is at risk of suffering long-term effects that may contribute to his violent behavior as an adult," particularly if the abuse was severe physical abuse that caused serious injury to the child.

April Learn how and when to remove this template message Some have asserted that Martin Luther taught that faith and reason were antithetical in the sense that questions of faith could not be illuminated by reason. Contemporary Lutheran scholarship however has found a different reality in Luther. Luther rather seeks to separate faith and reason in order to honor the separate spheres of knowledge that each understand. Bernhard Lohse for example has demonstrated in his classic work "Fides Und Ratio" that Luther ultimately sought to put the two together. This means that for Luther it is more important that the Bible be reasonable according to the reality outside of the scriptures than that the Bible make sense to itself, that it has internal coherence. The right tool for understanding the world outside of the Bible for Luther is none other than Reason which for Luther denoted science, philosophy, history and empirical observation. Here a differing picture is presented of a Luther who deeply valued both faith and reason, and held them in dialectical partnership. Reformed epistemology[ edit ] Faith as underlying rationality[ edit ] The view that faith underlies all rationality holds that rationality is dependent on faith for its coherence. Under this view, there is no way to comprehensively prove that we are actually seeing what we appear to be seeing, that what we remember actually happened, or that the laws of logic and mathematics are actually real. Instead, all beliefs depend for their coherence on faith in our senses, memory, and reason, because the foundations of rationalism cannot be proven by evidence or reason. Rationally, you can not prove anything you see is real, but you can prove that you yourself are real, and rationalist belief would be that you can believe that the world is consistent until something demonstrates inconsistency. This differs from faith based belief, where you believe that your world view is consistent no matter what inconsistencies the world has with your beliefs. Rationalist point of view[ edit ] In this view, there are many beliefs that are held by faith alone, that rational thought would force the mind to reject. But objected that most plants cannot survive being covered by water for that length of time, a boat of that magnitude could not have been built by wood, and there would be no way for two of every animal to survive on that ship and migrate back to their place of origin. Within the rationalist point of view, there remains the possibility of multiple rational explanations. Two observers of the story may provide different plausible explanations for the life of plants, construction of the boat, species living at the time, and migration following the flood. Some see this as meaning that a person is not strictly bound to choose between faith and reason. Evangelical views[ edit ] American biblical scholar Archibald Thomas Robertson stated that the Greek word pistis used for faith in the New Testament over two hundred forty times , and rendered "assurance" in Acts Griffith-Thomas, , who states faith is "not blind, but intelligent" and "commences with the conviction of the mind based on adequate evidence The result of the work of the Holy Spirit is faith. He wrote, "The Torah cannot prevent us from considering to be true that which our reason urges us to believe.

Source Finding reasons why research is important seems like a no-brainer, but many people avoid getting involved in research. The lazy if not mentally-drained student is probably thinking, "not again. Yet, for those who like to learn, whether they are members of a learning institution or not, doing research is not just an imperative, but a need. What reasons may drive one to appreciate research and to engage in it? A Tool for Building Knowledge and for Facilitating Learning Research is required not just for students and academics, but for all professionals. It is also important for budding and veteran writers, both offline and online. Determining either what the general public may want to know about or what researchers want others to realize or to think about can serve as a reason to do research. It can be acquired through various ways, such as reading books and online articles written by educators, listening to experts, watching documentaries or investigative shows, conducting scientific experiments, and interaction with other people, among others. These facts can be checked to ensure truthfulness and accuracy. In e pistemology , David Truncellito n. A factual proposition is commonly used to define "knowledge". The Brain Research Trust acknowledges the importance of research in building knowledge. Undoubtedly, it is crucial to finding possible cures for diseases, as well as how to prevent them. An example of such endeavor is the study of several psychologists who examined how sleep affects memory reactivation. In " Relearn Faster and Retain Longer: Along With Practice, Sleep Makes Perfect ", they "found that interleaving sleep between learning sessions not only reduced the amount of practice needed by half but also ensured much better long-term retention. Sleeping after learning is definitely a good strategy, but sleeping between two learning sessions is a better strategy. Their findings also emphasize how highly important sleep is to healthy brain function. A study by The World Bank in also underscored sleep as a key factor of efficient learning or the process of gaining optimal learning using few resources. The study reiterated the role of sleep in: It further noted that "knowledge is better consolidated when people study at the time when they are supposed to be awake rather than, say, late-night sessions. Said studies on the effects of sleep on the human brain are among the many topics that have already been examined by academics and specialists in various universities and medical institutions. A myriad of research ideas likewise awaits the attention of avid scholars and inquisitive writers. Indeed, research is instrumental in building and improving knowledge, as well as in supporting such knowledge with verifiable facts. Find Research Findings in Academic Journals 2. Means to Understand Various Issues and Increase Public Awareness Television shows and movies ooze with research - both on the part of the writer s and the actors. Though there are hosts who rely on their researchers, there are also those who exert effort to do their own research. This step helps them: According to entrepreneur and lifestyle coach Paul C. Brunson, in his interview with emotional intelligence expert and author Justin Bariso , "Oprah spends a disproportionate amount of her time gathering information from communities of people outside of her core different age groups, social classes, ethnicities, education levels, careers, etc. For their part, some film and TV actors would take time to interview detectives, boxers, scientists, business owners, criminals, and teachers, among others. Others even go through immersion to make them understand the issues of their respective characters better, such as living in jail or in a drug rehabilitation center. Many would read literature, biographies, or journals to have a better view or context of the story. And for many months he apprenticed under Marc Happel, who is head of the costume department at the New York City Ballet, watching intently and then helping to reconstruct the famous Marc Chagall costumes for a production of Firebird. At the end of the ballet season, Day-Lewis decided he needed to build a couture piece from scratch. However, professional thespians like Daniel Day-Lewis exert a great deal of effort to make their characters believable. The dedication they give to studying their roles involves a tremendous amount of research. A number of films, theater plays, broadcast dramas, and online videos present stories based on real-life events and problems. An Aid to Business Success Research benefits business. The report served " A Way to Prove

Lies and to Support Truths Ever experienced feeling that your mate is having an affair behind your back? What does research have to do with that situation? Doing research to reveal lies or truths involving personal affairs contributes in either making a relationship work or in breaking away from a dysfunctional one. When a person dislikes answering relationship-related questions, including her or his whereabouts, it is better to see that as a red flag and take baby steps to save yourself from what could become a more serious emotional mess later. Their integrity and competence depend on the quality - and not just quantity - of their research. Nonetheless, not everything scientists come up with get accepted or learned by everyone, especially when factors like religion, state suppression, and access to resources and social services e. Professional and credible journalists undertake thorough research to establish the veracity of their stories. The movie "Shattered Glass" shown in tells the rise-and-fall story of a real-life journalist who worked for the The New Republic based in New York City. Sans investigative research done by fellow journalists, Stephen Glass could have written more fictitious pieces for said editorial magazine. With the use of internet technology and social media, pseudo journalism has become a social concern. Fake news took center stage during the presidential campaign period in the United States. His statement in support of Donald Trump Besides the platform, fake news have become profitable for pseudo journalists whose main goal is to attract reader clicks that lead to Google AdSense revenues. Fact-checking to know the truth is integral to the process of research, for it is fueled by an inquisitive and critical mind. Murray, Social News and UGC Hub suggest that before news readers share information on social media, they need to assess the integrity of the news source and check for similar news on legitimate media outlets. Genuine journalists do not rely on imagination for their news reports nor do they avoid doing research. They eschew propaganda and have no intention of misleading the public. They are messengers of truth, not lies. Means to Find, Gauge, and Seize Opportunities Research helps people nurture their potential and achieve goals through various opportunities. These can be in the form of securing employment, scholarships, training grants, project funding, business collaboration, and budget traveling, among others. For those looking for a job or for greener pastures, research is necessary. Through this process, not only will the unemployed increase their chances of finding potential employers either through job posting sites or employment agencies, but it can inform them if work opportunities are legitimate. After finding a free or low-cost academic course or skills development training, students and professionals can assess their eligibility and know about application requirements and deadlines. Such an opportunity could hone their skills and knowledge, as well as enable them to build new connections. Doing research also benefit civil society and its members. Funding for projects and research initiatives has been a top concern for those who want to address social issues. However, not all funding organizations accept proposals year-long nor are they interested in solving many social problems. Thus, it is necessary to research for agencies that match the objectives of individuals and non-profits involved in advocacy or programs that seek social change. A wannabe business owner can likewise meet potential investors through research. A good fit in terms of vision, mission, goals and work ethic, as well as the capital needed to launch the business is critical to making the opportunity succeed for both. Some hobbies and interests are expensive to pursue. One of these is traveling. For budget-conscious tourists, searching for airfare and hotel promos, discount rides, and cheap markets is certainly a must to maximize the value of their money. It encourages self-growth, participation in worthwhile causes, and living productively. These two literacy functions help enable computation and comprehension. Without these skills, it is less likely for anyone to appreciate and get involved in research. Apart from reading and writing, listening and speaking are also integral in conducting research. Interviews, attending knowledge-generating events, and casual talks with anyone certainly aid in formulating research topics. They can also facilitate the critical thinking process. Listening to experts discuss the merits of their studies helps the listener to analyze a certain issue and write about such analysis. With the wide array of ideas available, scholars and non-scholars involved in research are able to share information with a larger audience. Some view this process as ego-boosting, while others see it as a means to stimulate interest and encourage further studies about certain issues or situations. Make Reading Books a Habit Even with the Internet, reading books remains important to doing research. Nourishment and Exercise for the Mind Curiosity may kill not just the cat, but the human as well. Yet, it is the same curiosity that fuels the mind to seek for answers. The College

Admissions Partners n. Several studies have shown that mentally stimulating activities like doing research can contribute to brain health. In "Educating the Brain to Avoid Dementia: However, she also noted that there may be other factors involved in averting said mental problem. One of these is intelligence. A study involving 11 year-old pupils in Scotland in , for instance, pointed to intelligence quotient IQ scores as "predictive of future dementia risk". Gatz opined that clinical trials are needed and that "conclusions must be based on large samples, followed over a long period of time. We have better evidence that good brain health is multiply determined, that brain development early in life matters, and that genetic influences are of great importance in accounting for individual differences in cognitive reserve and in explaining who develops Alzheimer disease and who does not For older adults, health practices that could influence the brain include sound nutrition, sufficient sleep, stress management, treatment of mood or anxiety disorders, good vascular health, physical exercise, and avoidance of head trauma. This demonstrates how research can be both an exciting and challenging cerebral endeavor. Data collection and analysis are vital aspects of the research process. These are mental activities that both expend brain energy and nurture brain health. Indeed, research and doing research encourage people to explore possibilities, to understand existing issues, and to disclose truths and fabricated ones. Without research, technological advancement and other developments could have remained a fantasy.

Apply it Guess where most programs and seminars fall short - of course at the application stage. Unfortunately the biggest obstacle in applying what we know is But no worries, these patterns are not set in stone. This course will give you all the guidance, tools and techniques you need to rewire your brain. It will set you up for abundance and help you finally tap into the full power of manifestation. Bob Doyle has been teaching these techniques for years, but never so effectively and comprehensively as he does now with the latest release of Wealth Beyond Reason 2. We have sifted through over a decade of content. We improved it, refined it and made sure it is as effective and user-friendly as possible. Bob and the other expert teachers will first help you figure it out, and then will teach you how to smoothly manifest it into your daily life. Easier said than done, you might think? On top of that - imagine creating your financial wealth while enjoying a satisfying career and fulfilling your mission. Yes, you can follow your passion, contribute to the world AND be rewarded for it - all at the same time. And then, the most important connection of all This course will help you gain self-love, self-respect and level up your self-care. Because you cannot pour from an empty cup, you know it. If you have that one sorted, the rest is totally figureoutable or shall we rather say: This course will help you work on your vibrations from the level of your subconscious mind. Do you see the full circle here? I have changed, I feel great! First I wanted to let everyone know that I was one of those who had lots of challenges when I enrolled in the Wealth Beyond Reason program. I have changed, I feel great, I have good health and my family is protected always. I just wanted you to know the great things that had come to my life.. Aylet "Within 3 months we were able to move to a bigger house My partner was able to give up working in a dingy, stinking nightclub. Suddenly we had enough money to buy a nearly new car, and even things like a PC and mobile phone, items which had been unthinkable just a year before. The business expanded to the point where we need a bigger house from which to run it. It was as if the Universe was giving us a second chance! Certainly, paying bills is no longer an issue! Money is no longer a problem. Roberts "I love this program! Bostian "My husband and I were on the verge of splitting. The change in the entire house can be felt as the truth and releasing and lightness that is coming of it. Why did you sign up for this course? Do you believe the Law of Attraction is working for you Understanding what you are doing right now is the first empowering step to learning how to create your dream life. This module covers that and "why bad things happen", plus other potentially controversial Law of Attraction subjects. Here you will learn the crucial things you need to know about the Law of Attraction and resistance: Plus, Bob will start to give you practical examples of how to apply this knowledge in specific areas of your life. This module is dedicated to teaching various approaches to releasing - and being in the moment. All of the techniques here have been used by Bob himself and other expert teachers - and they can work very quickly, whether or not you have any level of belief around them. He will also show you how to use gratitude as one of the most powerful tools in your manifestation arsenal. Bob will also show you how to start bringing this vision to life. Module 5 - Visualization Remember that things are the way they are for you right now Visualization gets the energy moving - so making a habit of it is something you want to start doing. This valuable module will teach you various techniques. How do you know what to do as you journey through life? Learn to listen to the Universe and how to read its messages. This module will not only teach you to trust your intuition, but will also set aside some common Law of Attraction misconceptions. And in the end This module will also show you how to teach these principles to your children - and to make a lasting difference on the planet. We need generations of people who are in tune with who they really are, who are playing a big game with it and contributing maximum value to the world. And that goes beyond getting "a good job". Taylor do an excellent job of making it understandable. Trust us, when you shift into energetic alignment with "anything is possible", "I deserve anything I desire" and "abundance is everywhere" - then the information encoded in that energy brings on the attraction process. Why Wealth Beyond Reason 2. Because of the wave of the Law of Attraction products after "The Secret" - some of which were extremely incomplete - there were thousands of people who thought they were learning about the Law of Attraction They thought they knew how to "use it", but had only a fraction of the information. This is what inspired us to reconstruct the Wealth Beyond Reason program from the ground up. We have redesigned our curriculum to speak to anyone of any background - including those who thought that the Law of Attraction was some silly marketing scheme or new-agey concept with no basis in truth. They are refusing to look at what has gone into creating the circumstances they want to change. The fact that you celebrate yourself and your life. Bob has a varied background in creative pursuits - he has experience as a composer, broadcaster, photographer and musician. A father of three children, he is also motivated by a strong sense of financial responsibility and a nurturing instinct towards personal improvement. But how did he become who he is today? Back in the nineties Bob used to have a corporate job that provided financial security This led him to make an enormous life change - quitting his job and exploring new ways to create the kind of life he had always wanted. His coaching was highly successful, but it was only through his own financial and personal difficulties that he understood what the Law of Attraction is really about. This led him to fully grasp how working with the Law of Attraction takes trust, intuition and a willingness to receive direction from the Universe The discoveries that he made formed the bedrock of his Wealth Beyond Reason book and program. He understands that many of the people who are drawn to learning about the Law of Attraction experience doubts or misunderstandings. Sonia Ricotti Is a motivational speaker, a corporate trainer, and a personal and leadership coach. Hale Dwoskin The creator of the Sedona Method and a bestselling author. Hale will walk you through a powerful process of release and letting go. Try Wealth Beyond Reason 2. In any case, your results are guaranteed IF you complete the program Meaning you do the assignments, ask for assistance when necessary and take your time. Quality Of Education You can count on the highest level of quality throughout this program. Every lesson, technique, written word, recorded audios and videos have been crafted down to the fine detail. I love your program and your capability of being so warm and protective. Thank you for your presence in this world. I would like to congratulate your talent on how to motivate my soul. Never in my life, and I have been searching a lot, I had found such a clear, well done and inspiring document. And that attitude of sharing everything. I owe you one my friend. Thanks for your course! It feeds my soul at such deep levels and puts me in a very good place each day You spend money on clothes, gadgets, books, cosmetics, health supplements Some of these deals are short term - they are supposed to give you instant gratification. Others are long term - they are supposed to help you grow and transform. This course will not only activate the neglected talents, skills and dormant knowledge you already have - helping you make FULL USE of your previous long-term investments It will also help you crush the decades of neuro-conditioning and limiting beliefs - and finally launch the most abundant version of yourself. As you go through Wealth Beyond Reason 2. The problems that used to bother you suddenly lose their power over you. Last, but not least.

Financial experts and money advisors have been shouting this mantra from the mountaintops for years. This is just one of those financial lessons that cannot be preached enough. If you and your family want financial security, following a budget is the only answer. For more on budgeting, check out 3 Alternative Budget Styles: Here are six darn good reasons why everyone should create and stick to a budget: It helps you keep your eye on the prize A budget helps you figure out your long-term goals and work towards them. A budget forces you to map out your goals, save your money, keep track of your progress and make your dreams a reality. Before the age of plastic, people knew if they were living within their means. At the end of the month, if they had enough money left to pay the bills and sock some away in savings, they were on track. But look at it this way: A budget can help you do just that. Although you may have to sacrifice a little now, it will be worth it down the road. After all, would you rather spend your retirement golfing and taking trips to the beach or working as a greeter at the local grocery store to make ends meet? It helps you prepare for emergencies Life is filled with unexpected surprises, some better than others. When you get laid off, become sick or injured, go through a divorce or have a death in the family, it can lead to some serious financial turmoil. This is exactly why everyone needs an emergency fund. Your budget should include an emergency fund that consists of at least three to six months worth of living expenses. Build it into your budget, set realistic goals and start small. It sheds light on bad spending habits Building a budget forces you to take a close look at your spending habits. Do you honestly watch all channels on your costly extended cable plan? Do you really need 30 pairs of black shoes? Budgeting allows you to rethink your spending habits and re-focus your financial goals. How many nights have you tossed and turned worrying about how you were going to pay the bills? People who lose sleep over financial issues are allowing their money to control them. Take back the control. Of course, this is just the tip of the iceberg. There are countless other advantages to following a budget. So what are you waiting for? Time to start budgeting!

**Chapter 6 : Beyond Reason – A show for those who dare to have an open mind**

*In order to get to the truth, we need to go Beyond Reason. At the beginning of the documentary the author states that like dream within a dream, this film is merely a projection within a projection, an illusion within an illusion.*

United Kingdom[ edit ] England and Wales[ edit ] In English common law prior to the "reasonable doubt" standard, passing judgment in criminal trials had severe religious repercussions for jurors. According to judicial law prior to the s: A judge who is in doubt must refuse to judge. Indeed, a conviction was appealed after the judge had said to the jury "You must be satisfied of guilt beyond all reasonable doubt. This statement cannot mean that in order to be acquitted the prisoner must "satisfy" the jury. This is the law as laid down in the Court of Criminal Appeal in *Rex v. Davies* 29 Times LR ; 8 Cr App R , the headnote of which correctly states that where intent is an ingredient of a crime there is no onus on the defendant to prove that the act alleged was accidental. If, at the end of and on the whole of the case, there is a reasonable doubt, created by the evidence given by either the prosecution or the prisoner, as to whether the prisoner killed the deceased with a malicious intention, the prosecution has not made out the case and the prisoner is entitled to an acquittal. No matter what the charge or where the trial, the principle that the prosecution must prove the guilt of the prisoner is part of the common law of England and no attempt to whittle it down can be entertained.

Canada[ edit ] In Canada, the expression "beyond a reasonable doubt" requires clarification for the benefit of the jury. Lifchus , [6] where the Supreme Court discussed the proper elements of a charge to the jury on the concept of "reasonable doubt" and noted that "[t]he correct explanation of the requisite burden of proof is essential to ensure a fair criminal trial. The Supreme Court suggested that the concept of proof beyond a reasonable doubt should be explained to juries as follows: The burden of proof rests on the prosecution throughout the trial and never shifts to the accused. A reasonable doubt is not a doubt based upon sympathy or prejudice, and instead, is based on reason and common sense. Reasonable doubt is logically connected to the evidence or absence of evidence. Proof beyond a reasonable doubt does not involve proof to an absolute certainty. It is not proof beyond any doubt, nor is it an imaginary or frivolous doubt. More is required than proof that the accused is probably guilty. A jury which concludes only that the accused is probably guilty must acquit. The Court also warned trial judges that they should avoid explaining the concept in the following ways: By inviting jurors to apply to the task before them the same standard of proof that they apply to important, or even the most important, decisions in their own lives. By equating proof "beyond a reasonable doubt" to proof "to a moral certainty". By qualifying the word "doubt" with adjectives other than "reasonable", such as "serious", "substantial", or "haunting", which may mislead the jury. By instructing jurors that they may convict if they are "sure" that the accused is guilty, before providing them with a proper definition as to the meaning of the words "beyond a reasonable doubt". The Supreme Court of Canada has since emphasized in *R. Starr* [7] that an effective way to explain the concept is to tell the jury that proof beyond a reasonable doubt "falls much closer to absolute certainty than to proof on a balance of probabilities. Proof of probable guilt, or likely guilt, is not proof beyond a reasonable doubt. Judges usually tell jurors that they will be satisfied beyond reasonable doubt if they "feel sure" or "are sure" that the defendant is guilty. Occasionally this produced profound misunderstandings about the standard of proof.

United States[ edit ] In the United States, juries must be instructed to apply the reasonable doubt standard when determining the guilt or innocence of a criminal defendant, but there is much disagreement as to whether the jury should be given a definition of "reasonable doubt. Nebraska , the U. Supreme Court expressed disapproval of the unclear reasonable doubt instructions at issue, but stopped short of setting forth an exemplary jury instruction. Supreme Court first discusses the term in *Miles v.*  However, this is not considered an essential standard in Japan and lower level judges sometimes disregard it.
