I had both the Kaplan and Princeton Review books. But the Nova GRE prep was by far the most thorough guide. While Princeton Review is great if you want quick strategies, I think the Nova is best for those who really have the time to study for the GRE. Also in terms of difficulty, the problem sets in Nova are more complex I think, and the math is a bit more challenging, compared to the Kaplan and Princeton Review books. I only wish I had started with and focused completely on the Nova prep guide. I felt like I had wasted my time on the other two books because of the name. Man I wish I started on Nova sooner!!! Free shipping outside of the United States when ordering 5 or more copies. Also available as an Amazon Kindle eBook: For students aiming to ace the math section of the GRE, this is the book for you. Twenty-three chapters provide comprehensive review of GRE math. Includes examples and more than exercises! Arranged from easy to medium to hard to very hard. The diagnostic test measures your strengths and weaknesses and directs you to areas you need to study more. If your target is a top tier, this is the book! I have tried other brands to help increase my GRE math score, but I found this book by far to be the best. Some of the questions are indeed harder than what you will see on the test which is a good thing as I studied from this book for 4 weeks and my quantitative score improved drastically. After the 4 weeks, I returned to look at some questions in other math prep books and I could do them all, even the difficult ones quiet easily. You need a good understanding of math concepts, and this book is not for beginners. It will definitely get you into the bracket quiet easily.

The GRE is an aptitude test. Like all aptitude tests, it must choose a medium in which to measure intellectual ability. The GRE has chosen math and English. OK, the GRE is an aptitude test. The question is â€™ does it measure aptitude for graduate school? This is to be expected since the tests are written by the same company ETS and are similar. No test can measure all aspects of intelligence. Thus any admission test, no matter how well written, is inherently inadequate. Nevertheless, some form of admission testing is necessary. It would be unfair to base acceptance to graduate school solely on grades; they can be misleading. For instance, would it be fair to admit a student with an A average earned in easy classes over a student with a B average earned in difficult classes? Furthermore, a system that would monitor the academic standards of every class would be cost prohibitive and stifling. So until a better system is proposed, the admission test is here to stay. I went from not being able to answer any questions to understanding and solving most of the problems. It is still a work in progress, but I am feeling much more prepared for the test now! The instructor reads a few basic principles of mathematics, and then solves a block of questions which require that particular understanding. You can pause each video before the instructor begins and try to solve it on your own and then compare your method and answer to the narrated approach and correct solution. Only three-hours-and-ten-minutes of the GRE count toward your score â€™ the experimental section is not scored. There are four sections in the test: The verbal section now consists of three types of questionsâ€™ Reading Comprehension, Text Completion, and Sentence Equivalenceâ€™ and three types of answer structuresâ€™ Single-answer multiple-choice questions, Multiple-answer multiple-choice questions, and Select-in passages. The experimental section can be a verbal section or a math section. You will know which type of section it is, though, since there will be an extra one of that type. Knowing that the experimental section can be disproportionately difficult, if you do poorly on a particular section you can take some solace in the hope that it may have been the experimental section. In other words, do not allow one difficult section to discourage your performance on the rest of the GRE. You will receive a verbal score, a math score, and a writing score. The verbal and math scores range from to , in 1-point increments. The writing score is on a scale from 0 to 6. In addition to the scaled score, you will be assigned a percentile ranking, which gives the percentage of students with scores below yours. The test is given year-round. You can take the test during normal business hours, in the first three weeks of each month. Weekends are also available in many locations. You can register as late as the day before the test, but spaces do fill up. How important is the GRE and how is it used? Although graduate schools may consider other factors, the vast majority of admission decisions are based on only two criteria: How many times should I take the GRE? Most people are better off preparing thoroughly for the GRE, taking it one time and getting their top score. You can take the test as many times as you like, but many graduate schools will average your scores. You should call the schools to which you are applying to find out their policy. Then plan your strategy accordingly. Can I cancel my GRE score? You can cancel your score immediately after the test but before you see your score. You can take the GRE only once a month. Where can I get the GRE registration forms? Most colleges and universities have the forms. You can also get them directly from ETS by writing to:

Chapter 3 : Nova GRE Math Book pdf download - Online GRE Revised

days ago I started practicing from Novas Math Bible. I bought Novas GRE Math Bible, I think the book is all you need for getting on quant. BUT you have to make sure you understand everything in the book, it blog.quintoapp.com GRE Preparation Course.

Books and Resources needed for Analytical Writing: GRE maintains a list of every possible topic that you will find on the actual test date!!!!!! Pool of Argument Topics: Once you have the list, group the topics into categories and proceed to b. Read, digest and understand the essay development template for both the issue task and the argument task as discussed on chapter 15 – Chapter 21 New GRE Premiere - Kaplan edition. Newer editions should be better. With the Kaplan template, you can begin to draw up possible responses to each topic category from the GRE topic list that you obtained from the GRE website. While this may not be compulsory, it will help you in paragraph development. Practice using the available topics from the GRE list in a timed mode – your practice should mimic the real test. For the GRE, its 30minutes per writing task but for you, its 22 minutes. You can only write well by constant practice. Truth be told I practiced only once and the end result was abysmal. I could only manage one sensible paragraph for the issue task – Big Poo. The way time flies when ur messing up is simply amazing. The argument task was much better, I wrote 4 sensible paragraphs – all within 23 minutes. Surprisingly, I scored a 3 on the writing section. Generally, Argument tasks are easier than issue tasks – for Argument tasks, an essay or issue with faulty premises is given; your job is to identify and logically explain them while for the Issue writing Task, you have to develop your own argument from scratch. Finding faults is easy argument task, writing from scratch is less easy issue essay. But for you reading this right now, a minimum of 4. Focus completely on the next section – You have seven 7 more sections to deal with and you need a focused, optimistic mindset to proceed successfully. Do you have to read them all from cover to cover? You want to be prepared for every possibility. Better you write the GRE once than write it twice. Think of the time spent on preparation – weeks, even months and finally, think of your Goals. So grab does books and study like mad. The end justify the means. Study each question category and solve the most difficult questions you can find on that category to re-enforce your understanding of that category. For example, if you had prepared with Grubber like I did, you will find the data interpretation, graphical and statistical questions difficult. Grubber does not really delve into these sections. Barron in addition with Manhattan and Nova does a better job. So read and understand the underlying principles and skim all books for difficult questions on all topics. But then, there are notable exceptions. Also those with an aptitude for numbers would better. Does that mean those with little mathematically backgrounds would end up with low scores? Just read up and practice, you might end up doing better than the so called Math wizards. The GRE Quantitative consists of two sections made up of 25 questions each. When studying and solving quantitative questions, set a time limit of 50 seconds per question and stick to it. Like previously stated, practicing with less time makes you stronger and faster. Solve lots of Quantitative questions. Manhanntan and Nova Math Bible offer a huge collection of quality quantitative questions. Solve as much questions as you can on both books. I studied solely with grubber. Were they super hard? To answer them, you need to understand the question 30secs, solve for solutions secs and compare possible answers 10secs. If u get it wrong, u start all over again. But as you start over, remember Time dey go ooooo! Someone on this thread advised - if you find any question difficult, simply mark that question and move on to others.. You may return to that question later. This is so true!. Honestly, You can actually survive by using only grubber. This section is pretty tricky. I remember one particular essay with about seven 7 paragraphs. It was so dense that you could barely understand the content of a single paragraph; It also felt like it was written in another language. It was that difficult. Also, the verbal section is made up of several subsections all mixed into one. You will find sentence completion synonyms and antonyms and essay comprehension all packed into one. However, if you study the Grubber Verbal Strategies: Grubber does an excellent job by building ur vocabulary, teaching new words and providing some interesting strategies for essay comprehension. This is where external input is advisable. Those who used Princeton, oya speak up. Unlike Jamb wicked people that provides a single opportunity to

write the exam per year, the GRE gives you 5 chances per year to write the exam better people. Prepare well and write it once. A score of per section is totally achievable. Just read and solve a huge collection of difficult questions in a timed mode. Oya it haff do, una bye bye, I don try. Thanks so much op for this write up, wish I saw this earlier before taking the test, I took the test few months back but am not ok with my scores especially the verbal The reading comprehension part sucks! I really wanna improve on it this time, which material will serve me well in this regard. And I will like to know where I can get more simulator for the test apart from the power prep.

Chapter 9 : GRE Math Bible by Jeff Kolby

The Nova Math Bible, if I am not mistaken is based on the old format, so you will not come across the numeric entry/multiple answer questions, which are on the current format of the GRE. Nonetheless, It does have some good/challenging questions in the Multiple choice/quantitative comparison types.
