

Chapter 1 : Home | Jump dem Bones - Bermuda Inshore Fishing

"The bonefish here average 7 to 12 pounds," says Linnel, a fact that puts Bermuda in the big leagues alongside south Florida and the Keys in terms of exceptional average size of fish. In fact, the fish here are probably a bit larger on average.

Beach sand is not volcanic but from finely pulverized remains of calcium carbonate shells and skeletons of invertebrates such as corals, clams, forams and other shells. When the red forms die, the skeletons plummet to the ocean floor. Wave action erodes the forams. They become mixed with other debris on the seabed such as the white shells of clams, snails and sea urchins. Bermuda is one of the northernmost areas in the Western Hemisphere but not the northernmost place in the world for coral reefs. In Bermuda, see the contrast of pink sand, turquoise water between the shoreline, outlying reefs, and dark blue of the ocean beyond the reefs or land. The sand in Bermuda is exceptionally fine. Beaches in Bermuda are often favored for weddings. Often, religious ministers in Bermuda shorts and knee length socks will preside. Most beaches are on the South Shore, but a few are on the North Shore. Watch out for the rip tide and rip currents on the South Shore beaches! They are formed by water seeking its own level. More water is pushed up on the beach as the frequency of the waves breaking on the beach increases. As this water accumulates, it returns to the sea to find its own level, thus causing a drag outwards. The larger the surf, the more intense the rip currents. They pull out to sea, not down beneath the surface. At low tide, when the reef formations are clearly visible and the sea is calm, South Shore potboiler formations can be explored. Some contain deep natural pools for visitors to swim or wade out to and enjoy. Many people assume, wrongly, that Bermuda must have good surfing beaches. Beaches are closed when the wind blows too heavily from the south. When gales and hurricanes occur, of the type that bring surfing conditions, surfing is dangerous. Rip tides are bad then, too. Some Bermuda beaches are noted for their sea glass. Unfortunately, especially since they have been raided illegally by visiting cruise ship and other American tourists. It is illegal to take glass from this or any other Bermuda beach. Persons who choose to remove such items are liable for prosecution. Water temperature can be as high as 85 degrees Fahrenheit in August. One of the most beautiful beach walks in the world At almost any time of year - except when there are hurricanes or gales driving the sea to shore in huge waves - a walk on the beach is glorious. The public beaches are open from sunrise to sunset. Do not attempt to use them illegally at night, for your own safety. Warwick Long Bay and lower down Stonehole Bay. Photo Bermuda Tourism Beaches in Bermuda - public and private - do not allow topless, nudes or semi-nudes. Camping and sleeping on the beaches are not permitted. The Bermuda Police Service encourages all beach-goers, especially visitors, to be extra vigilant of their belongings at the beach and only take items that are really necessary. They advise visitors not to take a lot of cash or credit cards or passports or watches other forms of identification or jewelry. There are periodic sightings on the beaches and in waters nearby of Portuguese Men of War Bluebottle, physalia spp - hydroid - see Royal Gazette photo right commonly but mistakenly referred to as "jelly fish" with "blue or white sails" usually clearly visible and with fiercely stinging, food-catching tentacles. They get this name from Mediterranean sailors who believed they resembled 17th century Portuguese ships of war in full sail. The man-of-war comprises four separate polyps. It gets its name from the uppermost polyp, a gas-filled bladder, or pneumatophore, which sits above the water and somewhat resembles an old warship at full sail. Man-of-wars are also known as bluebottles for the purple-blue color of their pneumatophores. These long, thin tendrils can extend feet 50 meters in length below the surface, although 30 feet 10 meters is more the average. They are covered in venom-filled nematocysts used to paralyze and kill fish and other small creatures. For humans, a man-of-war sting is excruciatingly painful, and sometimes deadly. Even dead man-of-wars washed up on shore can deliver a major problem if touched or prodded. Avoid them from a great distance at all costs, in the water and on shore as their sting could be very serious, or deadly to those at risk of heat attack or stroke or both. Ashore, they may look dead but are not. If you do not use extreme care, but approach them at entirely your own risk, repercussions and financial liability and are stung by a Portuguese Man of War jellyfish, as you undoubtedly will be in these dangerous circumstances, try to rinse with salt water and remove any visible

tentacles from the skin with a stick, glove or towel; treat the affected areas with vinegar; apply warm water or warm compress; remove any of the remaining tentacles by applying shaving cream with something like a tongue depressor stick or a credit card; and apply hydrocortisone cream to the affected area. To avoid further potential problems make sure you summon help in any way possible and see a doctor straight away or get to a hospital as soon as possible. In Europe, especially in Spain, the national Red Cross treats injured visitors on the beaches and governments also respond there by putting out red flags and sending boats to net the creatures. She also noted that a historical review of sample sites indicated that recreational areas were safe and fit for use, generally meeting the US EPA requirements. Asked about other efforts being taken to remedy the issue, he said: At that time, Government was very quick to act, to assess the situation and put in short term, medium term and long term plans to deal with the challenge. Minister for Health, Seniors and the Environment Jeanne Atherden noted several efforts in place to tackle the issue, including working to ensure proper disposal of grease and oil. Glass weathered smooth by the ocean, can be found on beaches throughout the Island but is particularly common on a few smaller beaches. It is sometimes used to make jewellery and various decorations. Cruise ship and other visitors have been spotted seeing it and taking it away, to the huge annoyance of locals. Neither residents nor visitors are allowed to take sand, shells, coral, sea fans or sea glass out of the beach or ocean or out of Bermuda. In the swimming season, the most popular public beaches have lifeguards from this service. Telephone or or fax The private beaches do not have this service. Beaches private and public A report by the Department of Health revealed some spikes in enterococci, a group of bacteria used as an indicator of pollution or faecal contaminants, but levels remained well within US limits. The US guidelines recommend that the day geometric mean does not exceed 35 colony forming units of enterococci per millilitres. Results between April 30 and August 20 show enterococci levels well below that limit, although levels at two beaches temporarily exceeded 15 CFU per ml over the course of the summer. The first and largest peak was recorded at Snorkel Park on the week of May 21, when testing showed a mean of nearly 20 CFU per ml. Levels at the beach fell throughout June, reaching a low of 5 CFU per ml before rising again in subsequent weeks. The second highest spike occurred at the east end of Horseshoe Bay on the week of July 30, with levels again approaching 20 CFU per ml before falling. CFU levels at the centre of the beach and at the west end remained lower, as did the results from Warwick Long Bay. The Department of Health has regularly tested seawater from across the island since , using US Environmental Protection Agency methodology for recreational water quality for marine water, and posted results on their website. Enterococci can enter the sea from a variety of sources, including storm water run-off, animal and seabird waste, failing septic systems, sewage effluent, boating waste and from bathers. Environmental health officers have been regularly testing the quality of the bathing water at the nine most popular beaches for swimming since the start of April. There is nothing we know of that has changed. Graphs showing the quality of the water in the East End, West End and central area would then be shared with the public, as they have been for the previous two summers. So what we do is collect an average value using 30 days of sample results. Every time we do another test and get another result, we get another average value. The water taken from those beaches is tested for enterococci, a group of bacteria used as an indicator of pollution or faecal contaminants, in accordance with EPA methodology for recreational water quality for salt water. The latest test results show all 14 sampling sites well below that level, with half showing a level of less than 1 cfu. Since the testing began, Snorkel Park at Dockyard has exceeded the cfu level on one occasion and environmental health officers are working with the West End Development Corporation, which owns the beach, to determine what caused the spike. On April 4, the level of enterococcus at Snorkel Park was 71 cfu per ml. The EPA guidelines suggest retesting if the level is above 70 cfu so another sample was taken the following day and the results showed the level had dropped to 4 cfu. The next day it was retested and the level had dropped to 61 cfu. Wedco general manager Andrew Dias said yesterday that the beach at Snorkel Park was not open on April 11 as there was no cruise ship at Dockyard. We are not resting on our laurels. While we are pleased with the latest results, we are still obviously investigating. We are taking proactive measures. None of the water goes into the sea. The water that comes out is basically potable water and is then reused for flushing and irrigation. That water is sampled daily and injected with chlorine. When we get spikes of enterococci it could be down to a number of different

factors or sources. It could be storm water run-off or even cleaning activities in the area or from animal contamination or from some sort of pipe leakage. It could be an anomaly because of high rain levels. The first test results to be made public in included Hungry Bay in Devonshire, after fears were raised that sewage was ending up there from the Seabright sewage outfall in certain weather conditions. Hungry Bay is not listed as a sampling site this year and nor was it last year. A Department of Health spokeswoman said: The Department is focusing the recreational water monitoring programme on popular bathing beaches in accordance with advice from Carpha Caribbean Public Health Agency. The public will be notified if waters exceed acceptable values by posted notice on the affected beaches, media release and by advisory at [www. Department of Health Public beaches](http://www.DepartmentofHealthPublicbeaches) It seems online maps of public beaches feature only some, not all, of them. The following tries to give short descriptions of them all. Some are 4 star rated by this author, an international travel editor.

Chapter 2 : Bermuda Fishing | Caribya!

I was there 2 years ago on a cruise and there is a resort that holds bonefish right off the beach, go there. It's right beside seven beaches resort. I fished there for them but didn't hook up.

At Bonnier Corporation, your privacy is important to us. Chapter 3 : Shore Fishing in Bermuda

Cruise passengers and locals alike frequently make Bone Fish Bar & Grill "home base" while in Dockyard, enjoying traditional drinks and local favorites, including Bermuda's famous "Rum Swizzle".

About fishing in Bermuda While the peak fishing season in Bermuda is from May to November, you can actually go for fishing year round. May to June is the spring run and you will get plenty of yellow-fin tuna and wahoo compared to the other types of fish in the deep sea. And June onwards as the summer temperature grows, anglers more often catch blue or white marlins, mahi mahi dolphin fish, great barracudas, sharks of different species and amberjacks, particularly off the shore. In the fall run, you get Wahoos and Yellow-fin Tunas. Wahoos and Tunas are still available. The other types of fish that you get in the Atlantic surrounding Bermuda includes black-fin tuna, groupers, rainbow runner, rockfish and snappers. Although all varieties are not always available, there are actually more than 27 different types of game Fish in Bermuda waters. While there is never a guarantee of a catch, your chances are always better with such guidance from veteran skippers. Remember that fishing had always been a serious livelihood in Bermuda. In the past whenever the crops were poor, islanders depended on fishing. He was able to make enough money to build his own house. Shore Fishing Shore fishing in Bermuda does not require any kind of permit. Some typical catch while fishing from shore includes Bonefish, Grey snapper, pompano and Barracuda. Visit [Shore Fishing](#) for details including possible catch, best locations for shore fishing, fishing equipment rentals etc. Reef Fishing There are coral reefs surrounding Bermuda which are often excellent spots for fishing. Reef Fishing in Bermuda can produce catches like Barracuda, little tunny, yellow tail snapper, Grey snapper, lane snapper and Bermuda chub. Visit [Reef Fishing](#) to know about great reef locations, fishing tours etc. Deep Sea Fishing Here you go beyond the reef line and into the deep sea, feel the real swell of the ocean and hope to catch rainbow runner, marlin, wahoo, yellowfin tuna, shark or dolphins. Two volcanic sea mounts - Challenger and Argus Banks located several miles offshore are the two main deep sea water areas where a fleet of fishing boats leave for every morning. Visit [Deep Sea Fishing](#) for details. Spearfishing Bermuda waters is home to largest rock fishes in the world. So if you are game to free dive without any gears and catch the large fish with poles, then Bermuda waters is ideally suited for you. Visit [Spearfishing](#) for details. Fishing Charters More than 20 charter fishing companies operate in Bermuda. Some of these boats also offer regularly scheduled group fishing trips on certain days of the week. Check out [Bermuda Fishing Charters](#) to know about the main Fishing Charters in Bermuda and also their offerings on group fishing tours. Fishing License For both Reef fishing and Deep Sea fishing you are covered by the license of the boat captain. The best way is to take a fishing charter boat. You can ask the boat captain to take you to a water or reef area where you get the type and size of fish you are looking for. Fishing Guidelines Note that there are some guidelines imposed on fishing in Bermuda although there is no permit or license required. For example, one can not catch and take lobsters along unless one has commercial fishing license. There are similar such guidelines for few other types of fish as well. There is a restriction that you can not collect sea turtles, whales, dolphins, or corals. You can not take conch and many other types of shells available in the waters. While fishing, you are always encouraged to release the fish unless you want to eat it. However you can get a certificate from the captain recording the type and weight of your catch. If you are taking a charter boat for fishing, I would recommend that you consult the skipper of the boat to know about all the fishing regulations in Bermuda. Note that marine turtles in Bermuda are protected species. Recreational fishing has been a threat to these turtles. Unwanted fishing lines and hooks thrown into the waters have caused many turtles having fish hooks embedded in their mouth, throat and even stomach resulting in serious injuries and even death. There are several turtles that had been admitted to the BAMZ Rehabilitation Center for treatment over the past decades. Bermuda National Trust has recently installed several monofilament recycling bins at popular fishing spots around the Island. These bins are made of 6-inch PVC pipes and serve as waste receptacles for unwanted fishing lines. You can also buy fishing equipment from here. A new hotline number FISH has been introduced in Bermuda so that members of public can report any illegal fishing activities. You can also call up the number and directly talk to the Marine Resource Staff or

Fisheries Wardens to know about current fishing regulations in Bermuda. Here are the most popular ones: Bermuda Billfish Release Cup: Bermuda Billfish Release Cup is an offshore fun-filled open fishing event participated by anglers with their full families. Bermuda Billfish Blast is an open event and a fishing competition held in the island every year. Bermuda Big Game Classic: Held every year, Bermuda Big Game Classic is the largest and one of the most popular open fishing events in the island. It is also the 3rd and the last leg of Triple Crown Series. Bermuda Triple Crown Billfish Championship: Bermuda Triple Crown Billfish championship is an open fishing tournament having three legs. The boat accumulating maximum points out of all the three legs becomes the winner.

Chapter 4 : BONEFISHING WITH IAN - Review of Jump Dem Bones Flyfishing, Hamilton, Bermuda - TripA

Shore fishing in Bermuda does not require any kind of permit or license. While Bonefish at the shallow waters is a typical catch, barracuda, snapper and pompano are also caught by the anglers from the shores. Although May to November is the best time for fishing in Bermuda, you can also catch.

Rockfish Snapper A popular method of fishing in deeper waters is trolling off the side of fishing boats. Charter boats will take you to some of the best fishing spots around the reefs and also provide some fishing equipment for your excursion. The coral at the southwest and northwest ends of the island mark the best places for fishing. Reef Fishing Bermuda is surrounded by three different coral reef formations. In the middle is Challenger Bank, which is approximately 12 miles offshore. These spectacular coral reefs are home to a number of exotic fish, including barracuda, tunny, chub, gray snapper, gray triggerfish, coney, yellowtail, and lane snapper. Shore Fishing Along with great deep-sea fishing, Bermuda has some excellent fishing locations just off the coast that are popular among the local fishermen. The main kinds of fish you can expect to hook when fishing off the shore are pompano, bonefish, and snapper. Bermuda Fishing Charters The cost of your fishing trip depends on the length of the charter you arrange. These prices generally cover everything except for food and beverages. Some charters will let you take all of your catch, while others will allow you to take back only a percentage or nothing at all, especially if your fish is particularly large. Contact the Bermuda Sport Fishing Association for more information on choosing a fishing charter. Early Bird Charters If you like the idea of catching some fish during your vacation, you will find 13 different charter operators that can help make it happen. If you want to organize a fishing trip, you might want to contact Mako Charters. As you begin researching charter companies for your vacation to Bermuda, you should probably know that Mako Charters is the current Bermuda Blue Marlin record holder. They are located in Hamilton Harbour, in central Bermuda. Many people agree that the downside to booking a fishing charter on vacation is that you have to wake up very early. You can call them at A third option is Early Bird Charters. Voted Best of Bermuda in , Early Bird Charters offers you an amazing fishing and boating experience led by Captain Jim West, who has over thirty years of experience. Glance through the table below to learn more about local fishing charters. Fishing Charters On Bermuda.
