Chapter 1 : Sheet music: Beginner Singing Book/Cd (Voice solo)

If you are new to programming for the Palm and are looking for a solid introduction, this is the book for you. Developed by computer science instructors, books in the for the absolute beginner series teach the principles of programming through simple game creation.

What motivates me is the fact that I had absolutely no help when I was starting out. It took me a really long time to get started as I was discovering things for myself using materials available at the time. My first ever band rehearsal with a high school band playing covers. First thing you need to do before playing the guitar is to tune the strings to correct notes. Check out this lesson to learn how to tune the guitar: Casually watch the videos in this lesson to learn how to hold the guitar and how to adjust the tone settings to get ready to play: Notes on the guitar At this point, I think you should learn how to read the guitar tablature. You can do it by watching this lesson: How To Read Guitar Tabs I remember that my guitar learning progressed much faster from the moment I learned how to read tabs. Learning how to navigate guitar tabs will push you right into the guitar world and it will allow you to actually start learning the instrument since reading guitar tabs skill is needed to follow lessons online, in magazines, books - you name it! Good news is that guitar tabs are relatively simple to follow as they are made for writing down guitar music in an easy way. This is unlike the dreaded skill of reading standard music notation. Once you know how to read tabs, you can just jump into practicing GMC lessons! All lessons on the site have guitar tabs included. Chords and playing first songs Finally, time to actually play the guitar and have fun! When I was starting, my first guitar goal was to learn how to play a few songs by The Beatles. I just wanted to learn them on the acoustic guitar. Guitar is a relatively easy instrument to get started with as it allows us to play all the famous songs in a so called "chord strumming" arrangements. To do so, you only need to learn how to hold and fret some basic chords. You should also learn some of the Beginner Strumming Patterns. When learning your first songs on the guitar, you are bound to encounter chords which are more difficult to play yet relatively common. Cheating Versions Of Common Chords. This way, you can immediately make use of the chord shapes you learn practice them further in a fun way by playing the actual song. These are chords like A7, E7 or D7 notice the "7" in their name. To learn how to play these dominant 7 chords, please check the following lesson: Dominant 7 Chords Video Lesson. I still remember how to play it till this day! Of course, the best approach is to start with a song by your favorite artist. This lesson, Picnic Panic Video Lesson , is a good example of how famous songs often re use the same chords. Drunken Sailor song is a fun one to play and it uses Am, G and Em chords. This song uses G, Em, C and D in the rhythm track. C, G, D, Am, Em. Now, you are probably wondering how to find chords for famous songs? They are usually available in guitar magazines and song books which you can rent from the library. The easiest way is to search them online. Type in the Google: The songs are usually presented in the format where there are song lyrics with labels for which chords should be played above the lyrics. So you need to match up lyrics with background chords that you need to strum along. Listen to the original song recording to figure out a rhythm to strum the chords in. When starting out, it is fine to strum 4 or 8 times in each musical measure. This will mean that you are playing 4th or 8th notes. Reffer to my Beginner Strumming Patterns lesson to learn some basic rhythm patterns which you can adapt and apply to playing famous songs. To learn more about finding the beat in music and what 4th quarter or 8th eighth notes are check my Beat Basics lesson. Technique Basics We usually all start by playing the acoustic guitar and strumming chord songs. Then comes the electric guitar! I remember my first contact with the electric guitar. A friend from school brought his Jolana Czechoslovakian brand - google it and a Zoom II guitar processor. We had the headphones plugged into it. I took it in my hands and played the solo from The Beatles song called "And I Love Her", solo which I was practicing on the acoustic guitar for a while previously. It was a smooth lead guitar tone patch set on the Zoom II processor and it sounded astonishing to my ears. To get started with the electric guitar, you do need to practice a bit several playing techniques. First and foremost, I would suggest

learning how to hold the guitar pick and how to play the first notes using down and up strokes. This lesson also covers striking all the strings at the same time strumming which will be useful to you if you are having trouble playing the acoustic guitar chord songs. Next stops would be to get familiar with what are and how to play the following three techniques: Hammer-ons ; Pull-offs ; Slides. These techniques are used in almost all the songs which are played on the electric guitar, including rhythm and lead playing. You can use this lesson to learn your first scale: Try using hammer-ons and pull-offs when playing the notes from the scale. Scales are used a lot when playing lead guitar and solos. Rhythm Guitar When starting on the electric guitar, one of the first things I did was to learn how to play the power chords. This was actually my ticket for joining the school band! This was a really cool way to get started and learning how to fret down the power chord shape on the electric guitar is relatively easy since it involves using only two fingers and just moving around the same shape on the guitar neck. This technique is responsible for all those cool sounding power chord rhythm guitar lines. If you are having difficulties internalizing the triplets feel this is normal! Those are called note durations and we use them to subdivide the beat in music in order to create interesting rhythms and grooves. At this point in your guitar development, it would be a good idea to start learning barre chords. Barre chords are not easy at first, but the good thing with barre chords is that they present a shortcut to playing all the most common chords on the guitar using only a few chord shapes which you need to practice. This is a bit of shortcut and it will help you become a good rhythm guitarist. There is really nothing else at this point that would prevent you from joining a local cover or original songs band if you wanted to pursue that path. Skipping metronome presented some problems later on in the intermediate stage at the time I was starting to experiment with recording and playing with a band for real. Metronome is not a must by all means and I actually always like to recommend playing along with the backing tracks instead of the metronome, as you get this way the same effect but it is more fun. Playing with a beat will help you push your playing forward if you feel you have trouble keeping the beat on your own. At this stage, you should be having fun with playing rhythm guitar stuff. You should be able to strum basic chord songs on the electric or acoustic guitar and know some of the chord shapes by heart while learning new ones along the way. We also covered things to do to get you started with the electric guitar, things like playing power chords. Power chords are a great path to being able to perform lots of famous songs by bands like Green Day, Offspring and others as well as composing your own songs or playing in a band. Then there are barre chords which are difficult at first but unlock quite a few possibilities on the instrument. Those techniques and concepts right there are strong enough foundations for a rhythm guitar player. You could be playing any genre really as with power chords, barre chords and open string chords you got it all covered! This is the perfect time to have fun with the guitar. Learn how to play famous songs, learn acoustic chord songs to play with friends by the campfire, join a band, shoot guitar videos and post them on Youtube - everything is possible now! These techniques are your intro and ticket towards making first steps in the lead guitar world. Have you always dreamed of playing cool blues, metal, jazz or country solos? Does it feel difficult or impossible? You can have fun right now, just with a bit of practice and correct guidance. I hope that you enjoyed this guide and that it has provided you with helpful information. I know that there is a ton of information out there on how to play the guitar, so it is really easy to get lost. This guide presents my personal guitar learning path and hopefully just a bit makes the journey smoother for you. Everyone is different and there is no strict path you should take. Please remember that the most important thing is that you always stay inspired and have fun with the instrument. That will make you pick up the guitar day after day and when you do it - you are bound to make progress no matter what you play or practice. First time playing in a studio with a full band and big amps - I was hooked! You can also challenge more difficult lessons at a slower tempo or just learn specific parts of the lessons, parts which feel doable.

Buying A Mandolin mandobaron T This is by far the question I am asked most frequently. I will give you two answers, the short answer and the long answer. Every one of these mandolins that I have played has sounded great and played easily, and give you a lifetime of enjoyment. Buy yourself a strap or find a piece of string or a shoe lace as a substitute and you will be ready to go! Also, buy a handful of picks in different sizes, shapes, and thicknesses to see what you like best. I find the picks that ship with the Mandolin Outfit to be a little too round for my tastes. If you buy it from Elderly or another well respected instrument shop, it will be ready to play right out of the box! Here is a quick example of my personal KM I can only offer it as an example, and make no promises to the way it compares to similar mandolins. I am using a planet waves strap and a Primetone 1. You should buy a mandolin that sounds and plays well without breaking the bank. If you buy a cheap mandolin that is badly constructed or badly set up, you will be less apt to play it and your enjoyment, interest, and ambition will suffer. The most important part of playing an instrument is to enjoy playing music on your own and with those around you. See my thoughts on getting a Proper Setup. Stick to well respected online dealers if you are unable to buy from a local shop. It is often best to pay a little more up front for a well set up instrument rather than to take a chance on a instrument that will need costly repair work. Buy an A style mandolin. While there are endless debates about whether F style mandolins sound better than A style instruments over in the Mandolin Cafe Forum , I firmly believe that it depends more on the maker of the instrument then whether it has a scroll and a couple points or not. F styles tend to cost about twice as much as a similar quality A style from the same builder, and if they do sound different, the F style will not sound twice as good. That said, if you prefer F style instruments over A styles and you honestly think the F style will make you practice more, by all means, buy an F style. Playing music, having fun doing it, and avoiding hurting yourself are the important things, and all other factors should serve these three main goals. Read More , too. The easiest way to do this is with a cordless drill. They are also very functional from simply tightening screws quickly to drilling large holes in various materials. Drilling holes sounds pretty simple, and it is! The video below includes tips like catching dust, making guides for drill holes, making sure you drill to the right depth every time, and creating pilot holes. Armed with these tips, your holes should be more consistent in depth, make less mess, and always be in the right place. Cutting Materials There are a number of ways you can cut, including a hand saw, jigsaw, circular saw, table saw, and band saw. They do take some muscle as they are non-powered, but are perfect for a quick job. Another advantage to jigsaws is that the blades are small, cheap, and interchangeable so that you can quickly swap between cutting different materials. Circular saws are the most heavy duty out of the 3, and are perfect for making long straight cuts. We will review the most common types and applications so that you can quickly determine what type you will need for your project and how to use it. Wood screws often have a coarse pitch, unthreaded shank the bit between the head and the tip , and flat heads. The coarse pitch helps the wood screw tap into the wood and make a solid connection. The unthreaded shank is used so that the head can go flush with the wood beneath it without the threads getting in the way. Flat heads are typically used so that the screw can sit flush against the wood. Most wood screws also require a pilot hole, which you should drill with a drill bit prior to screwing the screw into the wood, find a chart on what size hole to drill for what screw here. These screws are self-tapping, but still require a pilot hole like wood screws. Sheet metal screws have a fine pitch and are threaded up to the head. Drywall screws are typically longer and have coarse threads, more so than wood screws. They too have an unthreaded shank. Machine screws come in an array of types and shapes, but are more precisely machined and have higher strengths than other screws. The threads on machine screws are also very fine. When using machine screws you will secure them using a bolt or nut. Sanding Often when working with wood, after cutting it up and drilling holes the surface will be unfinished with unsightly burs and splinters. This is a simple fix with a quick sanding, but with a seemingly endless amount of types and grits of sandpaper and sanding equipment this can get confusing. It does take a bit of time, but you can achieve a perfectly acceptable finish with it. Orbital sanders are the next level of sanding. They utilize sanding disks for fine control of the surface and are small enough to be useful for tight spaces and small electronics projects. Belt Sanders are the heaviest and most powerful sanders here. They drive a belt of sandpaper around and can quickly chew through a lot of material. Most sandpaper is aluminum-oxide and comes in different grits. Grits typically range from about 20 to , 20 being extremely course and being extremely fine. When sanding, if you have a lot of material to remove and really need to smooth things out, a low or course grit will be best. There are two types of paint commonly used and choosing one will depend on the material and type of use your project will see. The paint is easy to clean up with just soap and water and easier to apply. It is durable and will adhere to most materials. Oil based paint adheres better to surfaces and should be used if you are painting over previous coats of oil based paint. The disadvantage to oil based paint is that the cleanup is harder: The higher the sheen, the more glossy the paint is. As a few general rules of thumb on sheen: The flatter the paint, the better it will hide surface imperfections. The glossier the finish, the greater the durability. Generally, the higher the gloss, the more washable and scrubbable the surface. With these skills and tips, you should be able to tackle most basic woodworking projects without buying a ton of power tools. Have you grown bored of your mundane home office?
