Buy now Composing music with Cubase Steinberg has pioneered many aspects of MIDI sequencing on a computer, and tools such as the Score, Drum and List Editors have become indispensable to modern music production. With easy-to-use editing and innovative composing and notation tools, Cubase offers the most complete MIDI composing and sequencing toolset available today. The Key Editor is the place where melodies, chords, arrangements and performances take shape and where ideas are sketched out, developed and taken to their full potential. Based on more than three decades of experience, the Key Editor comes with an ultra-intuitive handling and highly accurate tools. Drum Editor The Drum Editor is a highly intuitive yet powerful place for constructing and reworking beats, rhythms and grooves, offering a plethora of features to let you come up with the perfect rhythm for your song or production. Score Editor The Score Editor is a professional notation environment with full support for just about all symbol, display and editing options that this entails, including support for lyrics and remarks as well as drum notes, guitar tablature and lead sheets. Simply select the tools needed to create fully professional score layouts for others including soloists, orchestras and choirs. The Score Editor includes more than professional notation symbols and supports the import and export of Music XML files. VST Expression 2 VST Expression is a groundbreaking technology by Steinberg that provides an ultra-intuitive way of working with instrument articulations, dynamics and multiple controller values. Its second generation is based on three core technologies: Expression Maps help you work with musical articulations, while VST Dynamics allow for highly intuitive handling of dynamics. On top of this, Note Expression offers a revolutionary approach to create and edit multiple controller values in a single graphical interface, directly on the note they belong to â€" an invaluable feature for demanding orchestral arrangements as well as cutting-edge electronic music. Read more on VST Expression Sampler Track Just use any piece of audio to create a Sampler Track, play the sample chromatically, manipulate it with its on-board filters and controls, experiment and enjoy the sonic extravaganza only the Sampler Track can give you. And to top it off, the Sampler Track comes with Caleidoscope, a dedicated sample library with hundreds of samples and presets to get you started right away. Intelligent compositional tools Chord Track Cubase features a global Chord Track to facilitate working with chords in a project context and enables transform and harmonize functions throughout the application. Advanced voicing options are used to reflect any changes made to the Chord Track to both MIDI and audio tracks processed with VariAudio in a harmonically correct and ear-pleasing way. The powerful Chord Assistant helps you to generate everything from simple pop to complex jazz chord sequences that just sound great. Want to specify both the first and final chords but have no clue how to get there? This, also, is possible. The Chord Assistant lists chord suggestions from which you can choose. Chord Pads Chord pads are a great way to playfully and creatively compose with chords. Jam with chords and patterns in real time and remote control multiple parameters to change chords on the fly. The chord pads are playable via a MIDI keyboard and real-time parameters allow you to easily improvise chord performances by changing voicings, tensions and more as you go.

Compose traditional notation, tablature, or lead sheets easily and seamlessly on a Mac, Windows, or mobile device, even using handwriting. Create music directly on the staff, record or enter notes quickly with a MIDI instrument, or use the integrated virtual keyboard, fretboard, or drum pad. Film scoring is possible with the included advanced video capabilities. New layout controls allow for polishing the appearance of the scores and MusicXML support facilitates transfer between other notation and music apps. New Features of PreSonus Notion 6. Top 3 features Now merge audio and note data into existing Studio One and Notion documents, not just create new ones. Got a Studio One project and want to edit in notation? Now you can send notes to Notion, make some changes, and then send back the notes, updating the original Studio One document. You can even also send a mixdown to Notion, as well as the note data â€" and if it changes in Studio One, then just send the mixdown to Notion again. Sending stems from Notion to Studio One, and need to make some changes in the original? Keep your Studio One mix and effects exactly as is, and just update the stems from Notion. Tempo track now sends when transferring between Notion and Studio One. Slur Control â€" now when a slur is selected, you can drag its control points to adjust the start and end points, its placement, and even the curve itself. Step Time pencil icon added to Drumpad. Enter key now repeats previously entered chord in step time, when using drumpad and keyboard as per fretboard. Handwriting Fixes When handwriting where part contains existing tab notes, for any notes that are not changing, preserve the existing tab strings. When handwriting into a part that is linked to tablature, us the same tab logic as for standard note entry. Fix for when handwriting into a measure that already has an existing dotted chord, the dotted chord would become double-dotted. Fix for when adding a note with handwriting to a measure that contained a chord with multiple ledger lines, the chord would change. Fix for handwriting over more than one measure at a time in the handwriting window. Fix for when handwriting over more than one system. MIDI Export now retaining repeats Fix for not setting some instrument transpositions when importing MusicXML Fix for adding an extraneous double barline, when an existing double barline is followed by a cut and linked fix, for a crash when layout handles are shown on the extra double barline Right-click selection now does not audition notes Windows Right-click selection now does not start an object drag Windows Left and right cursor now moves dynamic, when dynamic is selected Chord symbols now respace measures again Finale keypad 9 now creates a triplet as expected, instead of a duplet Edit Velocity keyboard shortcuts now work again, providing Sequencer overlay is selected or if the staff is a sequencer staff. Fix for hairpins jumping if the start point is dragged past the end point and vice versa Fix for an adjusted hairpin width sometimes being ignored Change Instrument text is now not removed, when converting a Sequencer staff to standard notation Drumpads now stay lit, if in chord mode Drumpads now light up when in step entry PreSonus Notion 6. Several VST elements could also now be controlled remotely by external devices such as the Yamaha V. The last version still compatible with windows Applying the update to 5. Primarily was introduced to run on the new Windows XP operating system. It used the engine of a contemporary sister program as a base, Nuendo V1. One of the most innovative features was called Timewarp. The Timewarp tool allowed users to move gridlines. Many plug-ins, particularly those which run on DSP Cards such as UAD-1 or Powercore, cannot process their audio within a 1-sample time period and thus introduce extra latency into the system. Unchecked, this will cause some audio channels to end up out of sync with others. PDC checks all the various latencies introduced by such plug-ins and creates audio delay buffers to ensure that audio from all channels is correctly synchronized. It allowed Audio to remain in sync with the project even after changing its tempo. This was because the tempo map it copied to the Audio file when musical mode was enabled was derived from the fixed tempo setting of the project rather than from the tempo track. Nonetheless Audiowarp was an important addition to the musical features of Cubase. Despite the caveats, having the ability to change the tempo of a musical piece and have the audio tracks follow this new tempo was an important ability in music production.
