Chapter 1 : Farm & Ranch West 36 by Farm and Ranch Publishing, L.L.C. - Issuu

Piney Creek quadrangle, Wyoming--Converse Co., (formerly Bill 4 SE): minute series (topographic).

At the stoplight, turn left onto 6th Avenue U. Proceed about 4 miles 6. Indiana Street curves to the right and becomes Ellsworth Avenue. Stay on Ellsworth Avenue at the Archer Avenue detour by turning right, then circling counter-clockwise by turning left at 1st Avenue, then left on Archer Avenue east to the road closure. Walk up Quaker Court, the short connecting street to the right, then turn left on Bayaud Avenue east. The landslide area is located about halfway down the block. Leaving Golden, we will travel southward and eastward onto the flanks of Green Mountain, a low summit east of the Rocky Mountain Front in the west-central part of the Denver Metropolitan Area. Its distribution is restricted to this locality and its origin and provenance are debatable, although it may be a latest Laramide fluvial deposit. It probably originated in penecontemporaneous higher land to the west. Map showing zones of low L, moderate M, and high H rockfall-hazard potential along the west flanks of North Table Mountain modified from Simpson. Jefferson County has adopted the rockfall-hazard area delineated by Simpson as a no-build area. The hazard has been ignored by the city of Golden, however, as witnessed by new suburban development seen here as curved roads on the lower slopes of the mountain. Bouncing boulders, rising rivers, and sneaky soils: Primer of geologic hazards and engineering geology 15 Figure Photograph of a condemned, half-million-dollar house that was damaged beyond repair following the landslide on the north flank of Green Mountain. The subsidence and tilting of the driveway and the gateway rock was caused by a secondary head scarp, within the main body of the landslide, which runs between the photographer and the right side of the house. This conglomerate overlies the sandstones and shales of the Denver Formation. Landslides of various ages including active, modern ones and colluvium derived from the underlying bedrock or other surficial deposits underlie the side slopes of Green Mountain. Residential development on Green Mountain began in the s and continues to the present. Much of the remaining, undeveloped land is now in dedicated public open space. Residential development here has been adversely affected by moderate-to-severe drainage problems, erosion, natural-slope and fill instability, and soils-engineering problems. Many of these conditions still exist. These were cause for serious concerns by the City of Lakewood and Jefferson County. Residential development on Green Mountain continues today with serious geology-related and geotechnical problems. In particular, younger landslides have formed in some of the older landslides on Green Mountain, demonstrating that the older landslides are not necessarily stable. In , Jefferson County allowed development on an area of Green Mountain that had been previously mapped as landslide earthflow deposits. In , renewed movement of an older landslide occurred. This resulted in three homes being damaged beyond repair Fig. The landslide appears to fill a buried ancient channel or ancient landslide-failure surface that underlies West Bayaud and West Archer Avenues. The soils that underlie the area of renewed slope movement consist mainly of clay and sparse gravel. Because of the lack of gravel, the soils appear to be associated with displaced, greatly weathered claystone bedrock. The clay soils that are now moving appear to be an earthflow or landslide deposit that originally formed as a bedrock failure. When Jefferson County approved the subdivision, its approval was based on a geotechnical report submitted by the developer. This report indicated that the subdivision was acceptable from a geological and geotechnical standpoint. The geotechnical engineer recommended several mitigation measures, such as the installation of an underdrain below the sanitary sewer. The county imposed additional restriction on the development. For example, the county required that site-specific slope stability analyses be done for each proposed home site. Many of the recommendations made by the geotechnical engineer and required by the county were not followed as the area was developed. Later, geotechnical studies performed subsequent to the renewed slope movement found that the conditions modeled in the original report did not reflect the deep clay soils located in the ancient channel or failure surface. Three lines of earth anchors and drainage are currently being constructed to stop or slow movement of the landslide. The anchors will be approximately feet long 34

DOWNLOAD PDF PINEY CREEK QUADRANGLE, WYOMING-CONVERSE CO. 1970 (FORMERLY BILL 4 SE): 7.5 MINUTE SERIES

m and extend 40 feet 12 m into the claystone bedrock. After installation of the anchors, horizontal drains will be installed. The drains will be approximately ft long 60 m and will be placed on three levels along with the anchors. Backtrack to 6th Avenue U. Turn left onto the 6th Avenue freeway west , then exit right onto Interstate 70 west and State Highway C south. Bear Creek Reservoir lies to the east of C near the Morrison exit. Continue south on C and do not exit. The master stream in the Denver Metropolitan Area is the 16 D. The headwaters of Clear Creek and Bear Creek are located in the mountains. All of these streams are subject to the flooding scenarios discussed in a previous section see Stop 10 narrative. Travelling southward on State Highway C, we are afforded views of major flood-control structures that have been emplaced on these major streams. These impoundments were completed in , , and , respectively. Prior to this, a small flood-control dam Kenwood Dam had been built on Cherry Creek. It was subsequently determined to be grossly undersized and was removed. The present dams are all of the rolled-earth-fill type. Their reservoirs are used for recreation, and are surrounded by parklands. The earliest recorded major stream flooding in Denver occurred on Cherry Creek on May 20, , and the latest occurred in May , on the South Platte River and other Piedmont streams. Flows of the South Platte of 55, cfs through Denver were documented in June , its greatest historic flood. The flood produced 18, cfs flows of the South Platte. Floods have impacted numerous local communities over the years. Many of the more historic ones are documented in Follansbee and Sawyer One of the greatest floods occurred in on the Arkansas River, which caused much damage in Pueblo and its immediate vicinity. An earlier large flood occurred in on Boulder Creek. Since these flood-control works were installed, the Denver Metropolitan Area has mostly escaped serious damage caused by major flooding of their respective streams. However, some streams such as Boulder Creek, Clear Creek, and the upper reaches of Bear Creek, may be capable of producing flooding in populated areas. The GSA field trip will visit two areas of historical damage; additional areas may be visited as well. Highway exit, then exit right twice onto Quincy Avenue north, then east. Descend a long hill and turn right onto Simms Street south at the stoplight, then right onto Marlowe Avenue. The first damage-area tour consists of taking a right onto Union Street, left onto Urban Way, and left onto Tanforan Avenue back to Marlowe Avenue east. Take Marlowe Avenue back to Simms Street and turn right south. Proceed for about 2 miles 3. At the bottom of the hill, turn left onto Owens Street north. The second damagearea tour consists of taking a right onto Oak Court, left onto Parfet Street, left onto Walker Drive, and right onto Owens Street again south. This field trip mini-tour is designed to show the effects of differentially heaving bedrock on past, present and future development areas of the Upper Cretaceous Pierre Shale outcrop belt. After an introductory stop in the Harriman Park neighborhood, we will take a driving tour to view examples of older mids and newer mids damage. If the opportunity exists, we will look at a current development site where overexcavation and fillreplacement technologies are being used. Differential ground heaving has adversely affected development projects for over 25 years in southern Jefferson County, in an area that is underlain by the Pierre Shale and other Upper Cretaceous formations. This geologic hazard is manifested by the progressive growth of long, somewhat parallel ridges separated by relatively inert swales. Over 2 feet 0. Certain neighborhoods in the Pierre Shale outcrop belt have performed well over the years, while others have sustained tremendous amounts of damage to structures, roads and utilities. One home neighborhood has reportedly incurred more than 5 million dollars worth of damage and mitigation costs after 15 years, and the ground is continuing to heave. Until about , these problems were often attributed to the geological hazard of swelling soil. However, commonly used mitigative designs for swelling soil, such as drilled-pier foundations, floating-slab floors, and structural floors have been remarkably unsuccessful to date. Subsequent research by the U. Geological Survey and the Colorado Geological Survey Nichols, ; Noe and Dodson, indicates that the differential movements occurs within near-vertical claystone bedrock beneath the ground, resulting from the combined effects of wetting and unloading surface Fig. As a result of CGS education efforts, Jefferson County convened a task force of nearly 75 stakeholders in to innovate minimum standards for site exploration, evaluation, and design to mitigate heaving bedrock. New land-development regulations were enacted for the Dipping Bedrock Area in see Noe, Trenching has been implemented to

DOWNLOAD PDF PINEY CREEK QUADRANGLE, WYOMING-CONVERSE CO. 1970 (FORMERLY BILL 4 SE): 7.5 MINUTE SERIES

evaluate the geometric complexities of the dipping bedrock. Overexcavation and fill replacement to at least 10 feet 3 m beneath foundations are now specified as minimum site-construction standards if the geologic evaluation finds that the bedrock has a potential for differential heave. The new Jefferson County regulations have resulted in a significant reduction in damage to homes and infrastructure. Primer of geologic hazards and engineering geology Figure Schematic block diagrams showing basic types of differential ground movement associated with swelling soil and heaving bedrock modified from Noe and Dodson, A General model for swelling soil, which assumes uniform composition and a zone of seasonal moisture change that becomes more stable with depth. The addition of moisture to the soil results in a somewhat uniform heaving at the ground surface arrows. B Differential heaving of steeply dipping bedrock layers. The wetting of highly expansive layers, flanked by layers having lower swell potential, results in a linear pattern of heaving at the ground surface. C Differential heaving of bedding and fracture planes in steeply dipping bedrock. The uneven wetting and subsequent, thrust-like shearing movement along these surfaces results in a linear to curvilinear pattern of heaving at the ground surface. The mine crossing is located about 0.

Chapter 2 : Douglas County News Press by Colorado Community Media - Issuu

Piney Creek quadrangle, Wyoming--Converse Co., (formerly Bill 4 SE): minute series (topographic) Unknown Binding -

An extensive road system makes all areas of the ranch accessible by vehicle. There is good water with 12 developed springs and 21 stock ponds, as well as excellent wildlife populations: A minute drive Oak Ridge Ranch to the Monterey Peninsula airport, this property has the potential to grow grapes. Co-listed with Clark Company. A mixture of forest, wetlands, irrigated meadows, seasonal Colorado v Garfield County v Rifle creeks and a large lake creates exceptional wildlife habitat and a diverse ecosystem for trophy elk An exceptional big game hunting property, and deer. It is modestly, but comfortably improved. Large elk herds and other big game make this area home. Minimal improvements leave unlimited options to build in an area that commands dramatic views of snowcapped peaks and broad vistas of colorful hillsides and mesa tops. Improvements include two attractive ranch homes and a private mountain cabin. This is a terrific opportunity to own a productive operating mountain ranch with a huge hunting and wildlife component. Seller financing is available. Extensive wildlife includes antelope, whitetail and mule deer, grouse, pheasant, partridge, crane, turkey, duck and geese. Several ranch homes include a masterfully designed and beautifully built log home. This truly exceptional ranch provides an immediate opportunity to have a solid working ranch with extensive recreational attributes in a magnificent setting. Extensive guest facilities and traditional ranch buildings round out the compound with towering snowcapped peaks providing the larger context. The terrain consists of gently rolling native grass with easy access directly off the pavement a little more than an hour from Missoula. The property may be purchased in half or in its entirety. The ranch runs 1, mother cows and replacement heifers. The grazing allotments associated with the ranch include three spring and fall BLM allotments totaling over 9, AUMs. The majority of the deeded lands are in a contiguous block southeast of Anderson Ranch Reservoir. This very rare offering is one hour east of Boise. Gearhart Mountain Rock Creek, just over an hour east of Cody, Wilderness Area serves as the backdrop for this impressive ranch, which offers extensive national Wyoming. Approximately one mile of Paint forest boundary, private Forest Service grazing permits and a balance of irrigated meadows, Rock Creek and one and three-quarter miles timberlands and native rangeland. The property offers a full set of residential and agricultural of riparian habitat with trees, willows, brush improvements and is only an hour from the Klamath Falls airport. The property offers great views of the Big Horn Mountains and has the added benefit of adjoining 50, acres of public land. This ranch offers an increasingly rare opportunity to purchase a property with two and three-quarter miles of private water, highway accessibility and an outstanding wildlife component. An attractive hay meadow nestled below a gorgeous mix of conifers and deciduous trees offers many very private building sites with amazing views. Contiguous to other large holdings, this easily accessible large property is a rare find in the sought-after Bitterroot Valley. There is excellent potential for an equestrian facility. Adjacent to Kootenai Springs Ranch. Horses, cattle, elk, deer and antelope dot the landscape. The panorama stretches for 30 miles to the tops of surrounding mountain ranges, and night reveals only a handful of neighboring lights under a canopy of brilliant stars. Privacy is assured, yet the cow-town center of southwest Montana, Dillon, is within 45 minutes. The Horse Prairie Ranch is unique in its setting with headquarters in the center of the ranch and the private owner and guest cabins next to USFS lands in the upper reaches of the ranch. Beautiful meadows along the river bottom transition into a healthy forest of manicured ponderosa pine. Exceptional buildings include an inviting log home featured in national publications. It offers mountain peak views, excellent fishing, a classic mountain home and support buildings, which overlook lovely irrigated meadows along the river. A tastefully designed fishing cabin overlooks the spring creek and offers unimpeded views of the adjacent Lemhi Range and valley below. In addition to rainbow and brook trout, the ranch supports elk, mule deer, antelope, upland birds and waterfowl. Adjacent to the Routt National Forest, the property provides direct access to abundant big game and recreational opportunities. Daily commercial jet service is a mere minute drive, and Vail offers

CO. 1970 (FORMERLY BILL 4 SE): 7.5 MINUTE SERIES**

specialty shops 90 minutes away. An outstanding five-bedroom, 6,000 squarefoot home combines Western rustic with Western elegance on beautifully manicured and landscaped grounds. With the South Fork of the Provo running through the ranch for one-half mile and Noblette Spring Creek meandering by the home, the ranch enjoys sweeping lawns, a sports court, volleyball court, bike paths and a complete horse setup. Directly adjoining national forest, this ranch accesses great trail systems in both the summer and winter. This is one of those quintessential packages that has it all within a half-hour of a major ski resort community. Offering a professionally enhanced river plus 1. Breathtaking views, sandstone rock outcroppings, irrigated meadows, water rights and approximately one and a half miles of the Cuchara River meander through this picturesque landscape.

Manteo photo by Dan Waters, www.nearby.com. Discover how the South reinvented itself from field to factory to finance at the Levine Museum of the New South. Flat Rock The little village called Flat Rock is famous for at least two things: Tour the Sandburg home that has more than 65, artifacts on display, hike miles of trails and visit the Goat Barn, where Mrs. Sandburg owned and operated her premier goat dairy from to North Carolina The Arts c. Carving demonstrations, boat restoration projects, community oral history initiatives and changing exhibitions bring locals and visitors together to tell the stories of craftsmen and fishermen who carry forward time-honored traditions. Located on Harkers Island, the museum and Core Sound are synonymous with the waterfowl traditions of decoy carving, collecting and hunting. The modern structure in Wilmington is home to a diverse permanent collection representing international, American and North Carolina artists. The museum has sculptures, gardens and areas for picnicking under the giant Vollis Simpson whirligig. Winston-Salem In Winston-Salem, contemporary and historic museums celebrate the past and the future. Expect the unexpected at the Southeastern Center for Contemporary Art. Known for innovative programming and as an incubator for new artists, SECCA bridges art and technology to ignite new ideas. Located near the heart of downtown, the Museum of Early Southern Decorative Arts is home to permanent and rotating exhibits spotlighting decorative arts of the antebellum South. Explore other creative places at visitnc.com. Johnson Flat Rock Playhouse visitnc.com. Seagrove Pottery Take the winding rural road called NC Highway to see an old-time craft alive and well. The North Carolina Pottery Highway leads to Seagrove, the Handmade Pottery Capital of the United States, and more than masters of red clay, many who have been throwing pots for generations. See the most extensive Rodin collection between Philadelphia and the West Coast. The outdoor Museum Park features sculptures and installations inspired by the natural world. In between exhibits, take a break in the cool museum restaurant called Iris. Bring a lawn chair or grab a seat on one of the old church pews to hear traditional, old-time and bluegrass music. Then you can catch a ride through scenic western North Carolina on board the GSMR train, which offers a variety of excursions. Tour the National Historic Landmark, once a boarding house, to see where the writer spent a decade of his life. The house was later the backdrop for his colorful first novel, *Look Homeward Angel*. Manteo Drawing on the waters of the Roanoke Sound and Shallowbag Bay for inspiration, the shops, galleries and restaurants in Manteo make up about as charming a waterfront downtown as you could hope to find anywhere. In this Outer Banks town, bookstores are stocked with pirate lore and seafaring history, galleries are filled with the shapes and colors of the marsh and sea, and restaurants serve up delicious plates of fresh seafood. Tarboro Tarboro, one of the brightest of the smalltown jewels that adorn eastern North Carolina, is home to one of the largest historic districts in the state – 45 blocks – and one of two original Town Commons still left in the United States the other is in Boston. The Town Common, a acre, oak-shaded lawn, was established in and is listed on the National Register of Historic Places. Tour the Common and the surrounding enchanting streets on a guided or self-guided tour. Take in the sights at Waterfront Park, then take a short walk to the boutiques, antique stores and restaurants that make Southport shine. Try lunch at Yacht Basin Provision Co. You can also spend the afternoon touring movie locations and historic sites around town. Plenty of cozy cafes invite you to order up a meal and dine with a view. E Southport has a wide array of interesting shops. Chapel Hill, home of the University of North Carolina, is no exception. Dining options are seemingly limitless no matter what you are craving. Shopping includes avant-garde art galleries, vintage clothing stores, chic boutiques and everything in between. Dillsboro The quaint town of Dillsboro, located in the Smoky Mountains, has been a tourist town since the early s. Situated on the Tuckaseigee River, Dillsboro

C Subpart C Alcohol, Tobacco Products and Firearms ALCOHOL AND TOBACCO TAX AND TRADE BUREAU, DEPARTMENT OF THE TREASURY ALCOHOL AMERICAN VITICULTURAL AREAS Subpart C "Approved Am.

The beer is set for a Dec. Courtesy photo Eight south metro breweries will release a winter beer they co-created on Dec. Beer lovers who sample the weizenbock at each of the businesses will earn a commemorative glass. And this is another way to get together and be supportive in the craft beer community. Brewers from all eight businesses came up with the idea and met to create a common recipe. Laws regulating the distribution of alcohol require each business to brew its own batch of the mutually agreed-upon beer. But Blue Spruce owner Rick Kane thinks that will make the experience more interesting for consumers. And then obviously how we brew is different. Lone Tree head brewer Jason Wiedmaier said their version is ready to go. Once all eight sites are stamped, the customer can exchange the map for the commemorative glass. If the beer runs out before the glasses, however, Knose said breweries will still honor beer tourists with a stamp. December may not be the last time the brewers collaborate. We help each other out with ingredients. We see our customers at Grist and Living the Dream and vice versa. I think people just enjoy bouncing between all of us. While some stores will stay open all night, most that open at 6 p. The Black Friday celebration includes a free pancake breakfast in the Dining Hall from 6 to 8 a. The National Retail Federation predicts happy holidays for stores, based on a low unemployment rate that typically translates into confident consumers. The federation forecasts a 4. weak hand” say a pair of nines” but he acts as if he has a royal flush. He has run for office, organized and participated in protests and even been arrested back home in Russia. He was forced to withdraw his candidacy in December due to his inability to rent a meeting hall where at least of his supporters could assemble to endorse his candidacy, as is legally required. In August , Kasparov was arrested and beaten outside of the Moscow court while attending the verdict reading in the case involving the all-female punk band Pussy Riot. He was eventually cleared of any wrongdoing with the help of video evidence from the scene that was circulated on the Internet. Many in the audience agreed with his message of a stronger stance toward Russia from the U. Road rage leads to assault, cops say Victim and suspect fled before police arrived By Chris Michlewicz cmichlewicz coloradocommunitymedia. Raise money for your school club, team or organization while helping your local community newspaper through subscription sales. Call to register your school or organization. Officers responded to a call of a fight between two men near the intersection of Jordan Road and Bradbury Parkway Nov. Witnesses said both men were outside of their vehicles during the altercation, but both the victim and suspect left prior to police arriving on scene. The suspect was later identified by an anonymous informant as Steve Paula, 43, of Parker. A police incident report Paula says the informant told the victim that a video of the incident had been posted to Snapchat and later erased, but that still images from the video had been preserved. Parker police dispatchers located a Department of Motor Vehicles photo of Paula and investigators compared it to a still image from the video. He later told them that a large man had attacked him, but that he was unsure whether an accident had preceded the confrontation. Deal also said he did not remember driving home. Witnesses reported seeing a large Hispanic male punch a teen several times and that the teen did not strike back. One man estimated that the altercation lasted less than 30 seconds. His attempt to merge led to a minor collision and the other driver flipped him off, he said. He told police he did not remember whether he got out of his car. All of it is part of a study on bat conservation initiated by their math teacher, Tiffany Vaughn, who decided to try a highly integrated project approach at the Highlands Ranch school. She hoped it would encourage her seventh-grade students in mathematical thinking, critical analysis, creativity and innovation. The subject she chose was bats. Students conducted their own research, and chose a method for sharing their findings. Zuriyah Walsh chose to write a rap song about bats, though he admits he had misgivings initially. Visitors learned about the upcoming plans and new dealerships. Tara Pecha said she was always interested in bats, but now believes she wants to incorporate them into her future career. I want to do something for the bats. They may do a similar project next semester. If that were not reward enough, the teacher is gleaning new knowledge along with her students. The second floor will have a customer lounge and outdoor lounge area with a fireplace and John Cooper car display. The relocation from Littleton to Highlands Ranch was prompted due to the growth of the dealerships. The new space will be in 95, squarefoot new build. For more information about South Metro Denver Chamber membership and event opportunities, please visit [www. Tommi Wolfe The Startup Expert!](http://www.tommiwolfe.com) SB is a law that went into effect but essentially bifurcated the types of licenses that would be issued by the Department of Motor Vehicles. Those who are subject to the restricted license include persons who have temporary lawful presence and those who have no lawful presence. Those with temporary lawful presence includes refugees, those who have received deferred action or DACA, pending adjustment applicants, non-immigrant workers, investors, professional athletes, and students.. Those with no lawful presence are those with no current immigration status in the United States. As such, employers will be seeing their non-permanent resident workers, who are here legally in Colorado, with a restricted license. The restricted license essentially means that the person cannot use that license for federal identification and benefit purposes. This would include I-9 verification purposes as that process is a federal process. These persons must use alternative documentation to satisfy I-9 requirements. The Real ID Act was passed in to ensure that states provided strict regulations as to how identification documents and driver licenses are issued in order to ensure integrity and security. As such, these licenses, though restricted, are valid for other state identification purposes such as opening bank accounts and auto registration. Employers must be very careful not to subject themselves to discrimination laws when scrutinizing restricted licenses for their

(6) "Warm Springs Dam Quadrangle (formerly 'Skaggs Springs Quadrangle'), Californiaâ€"Sonoma County," minute series, (c) Boundaries. The Dry Creek Valley viticultural area is located in north central Sonoma County, California.

The state borders South Carolina and Georgia to the south, Tennessee to the west, Virginia to the north, and the Atlantic Ocean to the east. North Carolina is the 28th most extensive and the 9th most populous of the 50 United States. North Carolina is composed of counties. Its two largest metropolitan areas are among the top ten fastest-growing in the country: North Carolina has a wide range of elevations, from sea level on the coast to 6,625 feet at Mount Mitchell, the highest point in North America east of the Mississippi River. The climate of the coastal plains is strongly influenced by the Atlantic Ocean. Most of the state falls in the humid subtropical climate zone. More than 100 miles from the coast, the western, mountainous part of the state has a subtropical highland climate. The population was 10,000,000 at the census. The city covers a land area of 100 square miles. It is also one of the fastest-growing cities in the country. It lies at an elevation of 2,000 feet. The population was 2,000,000 at the United States Census. By the 1990s, Todd was larger than the nearby town of Boone in Watauga County. The population was 2,000,000 at the census, however, it grew by nearly 50% in residents in when it merged with neighboring Arlington. The county seat is Yadkinville. Plans for a vintage craft school for old world arts and crafts are underway. In 1990, Bethania celebrated the 100th anniversary of its establishment in 1890. As of the census, the town population was 1,000. As of the census it had a population of 29,000, which had risen to an estimated 30,000 as of 2000. It is located at the confluence of the Trent and the Neuse rivers, near the North Carolina coast. It lies 100 miles east of Raleigh, 87 miles northeast of Wilmington, and 100 miles south of Norfolk. New Bern is the birthplace of Pepsi Cola. Elizabeth began to develop rapidly after 1880, when a trolley line was completed, and was annexed in 1890. Home of Independence Park, the first public park in the city, Elizabeth became one of the most fashionable residential areas in Charlotte in its early days. In 1890 Elizabeth had a population of 3,000. Its business district is centered along West Sugar Creek Rd. Information provided by the Derita-Statesville Rd. It is the county seat of Mecklenburg County and the second largest city in the southeastern United States, just behind Jacksonville, Florida. Charlotte is the third fastest growing major city in the United States. In 1990, the estimated population of Charlotte according to the U. Census Bureau was 1,000,000, making it the 17th largest city in the United States based on population. The Charlotte metropolitan area ranks 22nd largest in the US and had a population of 2,000,000. The Charlotte metropolitan area is part of a sixteen-county market region or combined statistical area with a U. Census population estimate of 2,000,000. The population is 1,000,000; according to the Census it is the eighth most populous city in the state. Wilmington is the principal city of the Wilmington Metropolitan Statistical Area, a metropolitan area that includes New Hanover and Pender counties in southeastern North Carolina, which has a population of 1,000,000 as of the Census Estimate. Cary is in Wake and Chatham counties in the U. Located almost entirely in Wake County, it is the second largest municipality in that county and the third largest municipality in The Triangle after Raleigh and Durham. Cary is currently the second most populous incorporated town behind only Gilbert, Arizona in the United States. As of the census, the town had a population of 11,000. It is the county seat of Edgecombe County. It has many historical churches, some dating back to the early 19th century. The population was 89 at the census, a loss of 10 persons from the previous count of 99 at the census. There is no post office in Centerville, and thus no zip code; it simply uses that of Louisburg, which is located 12 miles 19 km west. All two sell basic general store items, such as toilet paper, soap, household cleaning products, canned and boxed Misenheimer Misenheimer, is an incorporated village in Stanly County, North Carolina. It is in the southern Piedmont region of North Carolina, near the city of Richfield. The population was 1,000 as of the Census. The college town is dominated by the main campus of Pfeiffer University, a university which was upgraded from a high school to a college largely due to financial support by Henry and Annie Merner Pfeiffer of NY. Pfeiffer also housed Gray Stone Day School, a charter high school. On January 6, 1990, Gray Stone moved to its new campus on what was previously Pfeiffer land in the town. Located in Riverbend

Township in northeastern Gaston County, it is an affluent home to many private schools and lakes. It is approximately 3 miles 4. Mountain Island is named for a small island in Mountain Island Lake, on the border of Gaston and Mecklenburg counties. Located on the extreme southwestern end of the lake, the island is mainly used as an anchor point for recreation, picnicking, and camping. Cashiers Cashiers is a census-designated place and unincorporated village located in southern Jackson County, North Carolina. As of the census, the community had a total population of Natives to the town have been pronouncing it [kah-sheers] since roughly the turn of the 19th century. It is one of several communities in the area popular with tourists and owners of vacation homes. Knotts Island Knotts Island is a marshy island and a small unincorporated community. The population as of the census was 9, The town of Elon is home to Elon University. Located southwest of the county seat, Goldsboro, it is located on U. Route 13 between Goldsboro and Newton Grove to the south. It is a small, close-knit community that has a large agricultural industry. The town has one stop light that was recently put in after numerous years of being a flashing yellow light. It has a grass field airport Cox-Grantham airfield with call sign 6nc0. The elevation is feet above sea level. The population was 21, at the Census. It has been the county seat of Lenoir County since its formation in Kinston is located in the coastal plains region of Eastern North Carolina. This marks the second time in twenty years the city has won the title, the last time being in A list of the families that have long resided in Francisco include: As of the census it had a population of Rodanthe, along with Waves and Salvo, are part of the settlement of Chicamacomico. Rodanthe includes the original Chicamacomico Life-Saving Station, decommissioned in , but now a museum. It is largely formed of barrier beaches and the silty outwash of the Cape Fear River as it drains the southeast coast of North Carolina through an estuary south of Wilmington. Cape Fear is formed by the intersection of two sweeping arcs of shifting, low-lying beach, the result of longshore currents which also form the treacherous, shifting Frying Pan Shoals, part of the Graveyard of the Atlantic. The New Hope Valley Railroad route was abandoned in the late s. Although it was not formally incorporated until February 28, , the North Carolina community that became the city of Rocky Mount dates from the beginning of the 19th century. The first post office in the area opened in It is part of the Myrtle Beach, SC metropolitan area. Its population was 2, as of the census. While the town is relatively small, it receives many visitors and tourists. Southport is the location of the North Carolina Fourth of July Festival -- a large scale affair -- which attracts 40, to 50, visitors annually to enjoy the many things that are available; venders from around the country, crafts, wondrous fireworks, etc. As of the census, Salvo had a population of Approximately year-round residents live in the community, the center of which is the Penland Road bridge crossing the North Toe River and CSX railroad line. Greenville Greenville is the county seat of Pitt County, principal city of the Greenville metropolitan area, and the 10th largest city in the state of North Carolina. In Greenville was ranked twenty-fourth in mid-city business growth and development by F Vale Vale is an unincorporated community in Lincoln County. Parts of Vale extend to western Catawba County It lies at an elevation of feet m. The area of Vale is nearly all rural with large farming. By car, Vale is about 10 minutes from Cherryville, 15 minutes from Lincolnton, 30 minutes from Hickory and Morganton, and 55 minutes from Charlotte. It is one hour from the Appalachian mountains and around four hours from the coast. Vale has a post office. Its ZIP code is At the census, the city had a total population of 14, The community grew from a single home and inn owned by the family of Reuben Reid, a local farmer, businessman, justice of the peace and father of David S. Reid , into a thriving farming community primarily supporting tobacco production and cigarette manufacturing. The population of Harkers Island was 1, at the census.

Symposium Coordinator - Rosemary A. Marmen Symposium Registrar - Betty J. The purpose of the Research Foundation is strictly to promote research in underground injection which it feels are necessary and to provide a means for the funding of those projects. To date, the Research Foundation has conducted the following projects: The Foundation has also established the UIPC Library, funded the first UIC Bibliography, and has as one of its ongoing commitments the further development of what will hopefully be the largest collection of UIC texts and articles in the country. Subsurface Injection of Fluids for the Recovery of Petroleum 79 5. Mississippi - A Case History 6. Measuring Behind Casing Water Flow Planning Successful Temperature Surveys How to Locate Abandoned Wells The field continues to produce about one million barrels of oil a year with approximately seven million gallons of water being produced which must be disposed of. Throughout the recent operating history of the field, the produced brines have been returned to the subsurface through the use of injection wells. The injection of produced brine was either purely disposal or in some cases, into producing zones, for the purpose of secondary recovery. A unique feature at Sour Lake is a twelve acre lake, commonly referred to in the area as the "sink hole". This lake formed in the late s as a result of subsidence due to the oil and water withdrawal. In , the Texas Railroad Commission, which has regulatory authority over oil and gas operations in the state, held a hearing to review all of the existing disposal permits for possible cancellation which would have the ultimate effect of virtually shutting in the field. Investigations and incidents relevant to the hearing included a wellbore flowing saltwater to the surface, injection wells without tubing or with mechanical integrity infractions, a reported two foot increase in water level in the sink hole coincident with the injection of , barrels of brine into a disposal well and an increase in chlorides concentrations in the sink hole from ppm to over 25, ppm. These events and their subsequent resolutions are discussed. The field has produced over 90 million barrels of oil and continues to produce in the vicinity of a million barrels of oil per year. In the early days of production produced brines were discharged to the surface and were carried off in drainage ditches. Later in the history of the field, produced brines were disposed of down wells. For the most part, brine disposal in an old salt dome field is fairly routine procedure. In the early s however, there was a series of events that could have virtually shut down the field. Other than around salt domes, oil and gas production is from Frio and Yegua sands along this trend. Miocene sands thin considerably over the dome, having a thickness of over feet less than two miles off of the flanks of the dome and less than feet at the crest. A schematic cross section of the west flank of the feature is illustrated in Figure 1. Oil and gas production in the immediate vicinity of the dome is from a series of Miocene sands. On the flanks of the dome, the deeper Yegua sands are productive. Oddly, despite ideal structural and stratigraphic trapping, there is virtually no Frio production from the flanks of the dome. Salt dome areas are prolific oil and gas producers because of the stratigraphic and structural traps formed in the surrounding lithology. The upwarping of sediments and extremely complex faulting in the sand-shale sequences results in a multitude of individual reservoirs. Unfortunately this complexity also makes precise geohydrological analysis nearly impossible. Because of the similar character of all of these formations, because it is difficult to distinguish them in the subsurface with drillers logs or electric logs and because it is assumed they all are hydrologically connected, these formations are generally referred to collectively as the Gulf Coast Aquifer. On the flanks of the dome, the depth to the base of fresh water reaches feet. At the crest of the dome fresh water is found to an approximate depth of feet. This configuration is illustrated in Figure 2. The transition from fresh to salt water is easily detected by resistivity logs as shown in that same figure. There are numerous water wells in the Sour Lake area Figure 3 from which water quality information can be obtained. The nearest shallow well to the crest of the dome that there is water quality information for is about feet to the southeast. It is drilled to a

DOWNLOAD PDF PINEY CREEK QUADRANGLE, WYOMING-CONVERSE CO. 1970 (FORMERLY BILL 4 SE): 7.5 MINUTE SERIES

depth of 60 feet and in had a total dissolved solids TDS concentration of 1, ppm. The City of Sour Lake operated two municipal supply wells about one mile south of the crest of the dome which drew water from feet. In the years from to the TDS concentration in these wells rose from ppm to over ppm. These wells were replaced by two new wells another two miles to the south. These wells were drilled to a depth of feet and feet. The deeper well initially had a TDS concentration of ppm and a chlorides concentration of ppm. After ten years of operation the IDS concentration rose to ppm and chlorides to ppm. The quality of water in the shallower well remained fairly constant over the same period of time with to ppm IDS and approximately ppm chlorides. This change in water quality is typical around a salt dome, especially in wells on the down gradient side of the dome. As the wells are pumped over time, salt water encroachment is to be expected. This can be assumed from the name given to the town of Sour Lake which was founded in In fact, there is a legend that the original Sour Lake, now gone, caught fire, inciting the rather superstitious Indians in the area never to return. Seeps of oil and sulfur to the surface first brought those seeking medicinal treatment to the area and as early as brought oil prospectors into the area. In the later years of the s there was minimal oil activity. On January 6, the first significant well was drilled by the Texas Co. Well over a thousand wells have since been drilled at Sour Lake. Texaco, alone has drilled in excess of wells on the major acre lease of the field as well as on some smaller surrounding leases, and to date over ninety million barrels of oil have been produced. Sink Hole Development A relatively unique feature at Sour Lake Field is a depression that developed in the ground in The twelve acre by 40 to 50 foot deep feature did not evolve over time, but in two brief incidents on October 9 and 12 of that year. All of the affected wells were apparently producing from the caprock of the dome rather than the overlying sands. The formation of the sink is attributed to the dissolution of the salt and cap rock, the production of over 73 million barrels of oil and the production of an undetermined quantity of saltwater, sand and dissolved solids. The volume of displaced earth at the surface was estimated to be 98, cubic yards. In the years from the early s until the late seventies, drilling, production, brine disposal and the sink hole apparently coexisted with little adverse consequence. The investigation was triggered by one incident, and in the several months that followed new circumstances either developed or were uncovered. In January , Texaco reported to the Texas Railroad Commission that an oily accumulation was collecting on the surface of the sink hole. The material which was collecting at an estimated rate of ten to fifteen gallons per day was described as a "fibrous, oily, muddy looking material. Texaco offered to make every effort to contain the material but felt that they were not responsible and would seek assistance from other operators in the field. The Railroad Commission made periodic inspections of the sink hole and surrounding area in the following months. One such inspection followed a report of contaminated water in Clemmons Gully into which the sink occasionally drains. The inspection revealed no problems, although later testimony alleged that some cattle died as a result of drinking this water. In May, Texaco received permission to skim barrels of fluid off of the sinkhole for transport through a pipeline. In May and June a new commercial brine disposal well was permitted, drilled, and completed 1, feet north of the sink hole. The well was drilled to feet and reached total depth in the caprock. Texaco maintains storage caverns that were dissolved in the salt dome for the storage of hydrocarbon products. To control the movement of product in or out of the caverns, Texaco had two lined pits at the surface to hold brine which was pumped into or out of the caverns. Around the time that Luther Hendon completed his disposal well, one of the Texaco pits developed a leak and needed to be drained of the several hundred thousand barrels of brine it contained so that repairs could be made. Luther Hendon was given permission to dispose of this brine by the Railroad Commission and had disposed of approximately , barrels of the brine before he suspended injection in late June. In the middle of June, an operator in the field reported a rise in the fluid level in the sink hole and at the end of June a program was begun to monitor the water level in sink hole. Precipitation and evaporation were taken into account. The area of the water surface was surveyed to be In consideration of these occurrences, the Railroad Commission District 3 office requested that a hearing be held in Austin to show cause why 1. All disposal wells into charged zones should not have permits cancelled and be plugged in accordance with Railroad Commission Regulations. All disposal wells should not

DOWNLOAD PDF PINEY CREEK QUADRANGLE, WYOMING-CONVERSE CO. 1970 (FORMERLY BILL 4 SE): 7.5 MINUTE SERIES

require tubing to be set on a packer with annual pressure tests. Any present or future disposal wells should not have permits cancelled if testing reveals that the injection zone is charged or under pressure. In July there was an official call for this hearing which was to be held on September 25, These two operators were singled out because they were injecting water not produced at Sour Lake. At the same time all of this was transpiring, the Luther Hendon application was pending, despite there having been emergency authority to dispose of the Texaco brine. Apparently other small operators in the field felt that the occurrences at the sink hole which jeopardized their operations could be attributed to the Hendon operation. They therefore joined together and called for a hearing to protest the Hendon permit. This hearing was called by the Railroad Commission and held on August 21, In the course of the two hearings a great deal of information as well as some speculation was brought forth on the events surrounding brine disposal in the field. The opposition to the Hendon application provided testimony which they believe connected the rise in the sink hole water level to the Hendon operation. Although at the time records had not been kept, photographs indicated a two foot rise in the water level between June 18 and June 28 during which time Hendon had injected approximately , barrels of brine. The two foot increase represents about , barrels of additional water in the sink hole. The opposition alleged that injection of the heavy brine from the Texaco pits Records of level began being kept after this incident but also after the time Hendon shut in his well and were kept from July 10 to August In this period, minus the effects of rain, the level increased approximately three inches. During August, excluding effects of rain, there was a net loss in the level. A note was made that during that period, Texaco disposal wells were shut in for testing or repairs. A great deal of speculation arose as to how injected brine could end up it the sink hole.

When it drops, said Sebring Fire Chief Robert Border, overhangs over the other businesses will go with it. She and her employees had just opened a couple of hours earlier for the breakfast crowd. Agate said fellow employees noticed their sign was sagging as early as Monday. Ladder 15 arrived at roughly 8 a. The canopy beam is supported only by that attachment and posts on either end. The attachment point had come away from the building as much as a foot and a half, Border said, holding his hands apart to show the gap. When it drops, Border said, it will take part or all of the others with it. The only exception, as of Wednesday morning, was Hibachi Buffet, which had its own roof and overhang system. However, any interruption in power would likely affect that business, as well. Jonathan Stephen Bash, 19, stands charged with lewd and lascivious behavior on a child age , contributing to the delinquency of a minor and interference with custody in connection with multiple sexual encounters over the last nine months. He was in jail at the time. Highlands County Clerk of the Courts records show he had a hearing in front of Circuit Judge Peter Estrada on April 17, with a bond reduction hearing scheduled for April His involvement with the victim, whose current age is 16, began July 1, , arrest reports state. Among the drugs mentioned were Smirnoff vodka, marijuana, hallucinogenic mushrooms, Xanax and cocaine. He would also use LSD, reports said. Circuit Court Judge Charles R. Wilson of the U. Court of Appeals had to say about separation of powers, the theme for the 60th annual U. Wilson said justices and courts do and always should strive to ensure justice for others, especially those not able to secure it through political means. Congress, state governors, state legislatures or just ordinary citizens. The judicial branch is not totally independent of support from the other branches. The president can appoint federal judges. Congress can vote to impeach judges and can create courts or judicial districts. Lately, Wilson said, people and politicians all over the nation have attacked judges and courts for decisions they have rendered, but not the reasons behind the decisions. Kansas saw an attempt to prohibit judges from ruling on educational funding. In Pennsylvania, lawmakers have moved to impeach four justices for their rulings on Congressional redistricting, Wilson said. Some faced impeachment over marriage rights decisions. For safety, after inspecting other attachment points, Sebring Fire Department closed and evacuated all businesses on the L-shaped plaza except Hibachi Buffet, which has its own roof. Grapefruit is 92 percent water, giving it one of the highest water contents of any fruit. That makes it good for overall health. Several studies have shown that people who eat half a fresh grapefruit or drink grapefruit juice before each meal lose more weight than people who do not. This stuff is called pith. Fiber is a good thing, and can help lower blood sugar, cholesterol, and possibly even colon cancer risk. Andrew Worley remains in the Highlands County Jail as of press time Wednesday and is facing three felony charges: According to the arrest report, on Tuesday, April 17, Debra Worley noticed several tools missing from a storage shed at her property, E. After I learned this information, I inquired if he may have stolen the items to pay off a debt for drugs. Owen gave Andrew Worley the option of telling his mother about his theft, but he declined; instead, Owen spoke with her. When Owen spoke with Debra Worley, she chose to pursue charges and banned her son from her properties. Paul Donald Cantwell, 21, of Lake Placid has been charged with aggravated battery and using a two-way communication device to commit a felony. Marty Lee Hickey Jr. Travis Hickey, 19, has been charged with aggravated battery and using a two-way communication device to commit a felony. Jonathan Vega, 23, also was charged with aggravated battery and using a two-way

DOWNLOAD PDF PINEY CREEK QUADRANGLE, WYOMING-CONVERSE CO. 1970 (FORMERLY BILL 4 SE): 7.5 MINUTE SERIES

communication device to commit a felony. Cantwell was arrested Friday and also bonded out of jail. Marty Hickey, arrested Monday, is in jail without bond. Just before Cantwell stopped the car, reports said, the three other men approached from a wooded area. Marty Hickey, reports said, had a black handgun. The three pulled the victim from the car and all four, including Cantwell, beat him, according to arrest reports. Marty Hickey allegedly hit him in the head with the gun. Both Marty and Travis Hickey, who are brothers, also denied the accusations and said their mother would vouch for their whereabouts, which she did, reports said. Through this and other investigations, they learned more details. Once there, they drove off Jack Weisser Boulevard, and then quickly onto a second dirt road at high speed. The victim locked his door as they approached, reports said. Cantwell allegedly unlocked the door and the three men pulled the victim out and all four, including Cantwell, beat him, reports said. When hit with the gun, the victim said he heard it click, like the trigger being pulled. During the beating, reports said, Marty Hickey allegedly told the victim he had a week to pay him money and threatened his life and the lives of his family. Allegedly, the victim stole three pounds of marijuana from Marty Hickey two years ago. Shortly after that, alibis began to unravel, reports said. He thought it unlikely that storm damage is the culprit, since all three canopies show similar structural problems. As of Wednesday morning, he was still waiting to talk with the property owner. The falling overhang has put strain on nearby overhangs. Sebring Fire Chief Robert Border has ordered all businesses sharing that rooine closed and evacuated until the problem is xed. At one point, their relationship also allegedly involved a pregnancy and an abortion. Arrest reports do not specify how the relationship came to light. When deputies asked Bash about it on April 6, reports state he denied ever having sex with the girl. He also denied having sex with her when asked about the pregnancy and abortion. Allegedly, he had offered to help the girl pay for the abortion. When asked why he would do that, Bash allegedly said he felt sorry for the girl. Reports said deputies facilitated a speakerphone conversation between Bash and the girl while interviewing him, but details of that were also redacted. Reports said he attempted to have sex with her then in a bedroom he shares with a girlfriend, and she refused. They instead used a second bedroom, reports said. Allegedly, Bash gave her money to buy Xanax for both of them. They then drove to a nearby lake and smoked the marijuana. Bash allegedly tried to kiss her, and she refused. After that, reports said, he drove her home. He allegedly had a habit of locking his door and turning his television up loud, reports said, which also drowned out the sound of her climbing in. They would then spend entire nights together, reports said. On yet another occasion, the two stayed at the Quality Inn in Sebring. They checked in at night, smoked marijuana, drank and had sex. Both came back positive, reports said. He told her the only option was an abortion, which was done on Oct. The girl told deputies Bash knew about her young age, and most times would initiate their sexual activity. Wilson said the U. Constitution, far from perfect, was amended 27 times. David Langford Professionalism Award went to J. Timothy Sheehan, who even as a young boy held his father to the integrity of a promise to quit smoking. Kelly Award went to Michael Allen Rider, who through education and spiritual guidance, has been a mentor to young people. Strength said she loves to study history and civics, especially American history. Also, four years ago, Strength underwent surgery to remove cancer from her thyroid gland. As a precaution, all businesses were evacuated and closed. FFS has brought in special equipment to navigate through the unforgiving terrain. The muck re burns the organic material under the surface of the ground, making it very unstable. That is why this tree uprooted and fell. Bean, 79, of Avon Park, passed away Thursday, April 19,

Full-scale resorts and day-use areas offer downhill skiing, snowboarding and snow tubing, each enhancing what nature drops by adding machine-made snow. There are also cross-country skiing trails, snowshoeing routes, ice-skating rinks and sledding hills, so bundle up and get outside! A B C F Kiteboarding Kiteboarding combines aspects of windsurfing, wakeboarding, kite flying and gymnastics into the latest extreme sport. E Ziplining Strap into a waist harness attached to an overhead cable and glide swiftly through the treetops at zipline tours scattered across the state. Poke around on foggy morning fingers of mirror-flat lakes. Bob through rapids on tumbling mountain streams. Try paddleboarding and ride tides to explore shallow trails meandering through coastal marshes. H The Dragon Smooth roads twisting through gorgeous scenery attract motorcyclists, and North Carolina boasts them in abundance. The nearby Cheroke Skyway sweeps through more high country for another alluring ride. And the Diamondback features curves in 12 miles near the Blue Ridge Parkway. More pack ropes, harnesses, rappelling devices and other gear to aid climbing on sheer cliffs throughout the Tar Heel State. J Windsurfing Any body of water touched by steady breezes draws windsurfing fans and their graceful combination of sailing and surfing. J The North Carolina coast is hard to beat for windsurfing. Lessons are offered at many places along the coast, and equipment rentals are available for any level of expertise. From the mountains to the sea, North Carolina offers a beautiful backdrop for outdoor adventures. Or visit Shelby, and picture the crowds and Peacekeepers at the Hob and the town square where the Reaping thrusts Katniss into the Games. C Homeland Go inside the world of Homeland, an intense psychological thriller about a soldier-turned-terrorist. Shot at locations around Charlotte, including the upscale Mountainbrook neighborhood and nearby Lake Norman, Homeland transformed this versatile Piedmont city and its surroundings into places like Washington, D. D Film Festivals More than two dozen film festivals feature international and domestic films, documentaries and shorts from established and up-and-coming directors, producers, actors and writers. The RiverRun International Festival invites filmmakers to spend a few days in Winston-Salem discussing their films with audiences. Other festivals are held in Asheville, Charlotte, Greensboro and Raleigh. The fall festival offers a lakeside screening of the movie, dance competitions and outdoor concerts. Visit Lake Lure on your own to see where the signature scene took place. Your five senses will do just fine. Plan your journey around stops to hike nature trails, explore small towns, experience historic sites, visit art galleries, spread picnics and gaze from roadside overlooks. Set among golf courses, peach orchards and horse farms in the Sandhills area, the acre Weymouth Woods-Sandhills Nature Preserve harbors tall longleaf pines, endangered red-cockaded woodpeckers, rare bog spicebush and other wildlife. Walk sandy paths to see the Piedmont in its most natural state. B Download the tablet version to see images come to life at visitnc. The smallish mustangs, called Banker Horses, most likely descend from mustangs left on these remote islands by Spanish explorers five centuries ago. While others require hikes to reach, this thundering foot drop allows easy access, even by wheelchairs. Swim in the pool at the base, but watch out for slippery rocks.
