Putting the PXC BT into operation Putting the PXC BT into operation Charging the battery pack Before using the battery pack for the first time, charge it for at least 3 hours. When charging the battery pack outside the headphones, the LED the battery pack lights up red.

Always include these instructions when passing the headphones on to third parties. Remove the batteries if the headphones will not be used for extended periods of time. Keep the headphones at least 1. Sennheiser headphones also sound exceptionally good at low volumes. Safety instructions for the Lithium-Polymer battery pack If abused or misused, the battery pack may leak. In extreme cases, it may even present Please understand that Sennheiser does not accept liability for damage arising from abuse or misuse. Keep away from children. Dispose of the battery pack at special collection points or return it to your specialist dealer. Switch battery pack-powered devices off after use. Only charge the battery pack with the appropriate Sennheiser chargers. When not using the battery pack for extended periods of time, charge it regularly about every 3 months. Do not mutilate or dismantle. Do not continue to use a defective battery pack. Immediately remove the battery pack from an obviously defective device. When not using the device for extended periods of time, remove the battery pack from the device. Only use the original Sennheiser battery pack. Do not expose to moisture. Their supra-aural, closed design and the latest active noise compensation technology NoiseGard make the PXC BT especially suitable for use with in-flight entertainment systems. Due to their active and passive attenuation of ambient noise, they let you enjoy music even in noisy environments. Via their Bluetooth interface, they can be connected to a wide variety of Bluetooth enabled devices. It allows you to not only hear, but experience and feel the audio as it was intended. Utilizing apt-X, Bluetooth technology can now offer wireless audio quality that is indistinguishable from the highest quality wired connection. From major public broadcasters to film production studios, apt-X is used throughout the world to transmit high quality digital audio from A to Z in real-time. It was developed to meet the exacting standards of musicians and audio engineers who love the exceptional dynamic range and high fidelity it provides. Now available on selected consumer devices, the apt-X technology ensures that music lovers everywhere can stream the rich listening experience that only apt-X can deliver. Tiny microphones pick up low-frequency ambient noise up to 1 kHz near the ear. The NoiseGard electronics use this noise to generate a sound wave which is the exact opposite IE: When TalkThrough is activated, professional quality microphones mounted on the outside of the headphones pick up all acoustic signals in the immediate vicinity. Annoying background noise is electronically filtered out, only allowing the voice of the other person to pass through the headphones clearly. Keep this button pressed for 4 seconds. Keep this button pressed until the desired setting is made or the desired action is completed. This pictogram symbolizes an interruption. This pictogram symbolizes an interval. This pictogram symbolizes a continuous flashing. The LED flashes 3 times per second. The LED flashes in a rhythmic sequence. The LED flashes blue 3 times and then goes off. You hear a short, negative acknowledgement tone. The operating time of the battery pack depends on the device settings, the listening situation and the audio sources used. You can also charge the battery pack while using the headphones. Connecting the charging cable to the battery pack You can charge the battery pack either inside or outside the headphones. This is helpful if you are using a spare battery pack to be ordered separately. To charge the battery pack inside the headphones: To charge the battery pack outside the headphones: To connect the charging cable to a PC: The battery pack is being charged. To connect the charging cable to the mains unit: If you have charged the battery pack outside the headphones: Adjusting the headband For optimum transmission quality, good noise attenuation and best possible comfort, the headband has to be adjusted to properly fit your head: You hear an ascending beep. The headphones are waiting to be paired with a Bluetooth enabled device see page You hear an ascending beep and then your audio source. The headphones will try for 3 minutes to connect to one of the up to 8 previously paired audio sources. If this fails, the headphones automatically switch off after 60 minutes. You hear a descending beep. The Bluetooth connection is automatically deactivated. The headphones switch off. Hearing damage due to high volumes! Listening at high volume levels for long periods can lead to permanent hearing

defects. Please protect your hearing. Sennheiser headphones also sound exceptionally good at low volumes. In order that data can be transmitted wirelessly using Bluetooth technology, you have to register your headphones with your audio source pairing. The headphones can save the connection profiles of up to 8 Bluetooth devices with which they have been paired. After switch-on, the headphones automatically connect to one of these devices. If you pair the headphones with a ninth audio source, the saved connection profile of the first Bluetooth device will be overwritten. If you want to re-establish a connection with the first audio source, you have to pair the headphones with this audio source again. In addition to adding Bluetooth capability to your audio source, this dongle uses apt-X, a technology that ensures crisp, pure and full stereo sound. With apt-X, Bluetooth can now offer wireless audio quality that is indistinguishable from the highest quality wired connection. The transmitted radio waves can impair the operation of sensitive and unprotected devices. A connection to the headphones is only possible if your audio source supports the A2DP profile. If a suitable audio source is found, the devices will exchange device identification information. The devices have identified each other and the headphones are paired with the audio source. If no device is found within approx. The headphones will then try for 3 minutes to connect to one of the up to 8 previously paired audio sources. If this fails, the headphones automatically switch off after 60 minutes. To switch the flashing on during a Bluetooth connection: To switch the flashing off during a Bluetooth connection: This setting is retained until the Bluetooth function is switched on again. To switch the headphones off: Press the Master button and keep it pressed until the LED flashes 3 times red. To switch the Bluetooth function off: Press the Bluetooth button and keep it pressed until the LED flashes 3 times red. The Bluetooth button goes off. The Bluetooth function is switched off. The Bluetooth button is backlit, indicating the current setting. The backlighting goes off after a short time to conserve energy. Press any button on the headphones to display the current setting of the Bluetooth function. If the headphones are already connected to the audio source via the Bluetooth interface, the Bluetooth connection is automatically disconnected when you connect the audio cable. When the audio cable is connected to the headphones, the Bluetooth function cannot be switched on. Depending on the listening situation, you can switch these functions on or off. To switch the NoiseGard function on: Press the NoiseGard button for 2 seconds. The button is backlit in red and the NoiseGard function is switched on. To switch the NoiseGard function off: The red backlighting goes off and the NoiseGard function is switched off. The Talk-Through function allows you to communicate undisturbed with other people without having to remove the headphones even when NoiseGard is switched on. To switch the TalkThrough function on: Briefly press the NoiseGard button. The LED lights up red.
