

**Chapter 1 : The Addiction Spectrum: A Compassionate, Holistic Approach to Recovery**

*Recovering Academic September 4th, When Elrena and I first began talking about Mama, PhD, we quickly developed a wish list of contributors, and Jennifer Margulis' name was on both our lists.*

Margulis, an award winning writer and professor of investigative journalism at Brandeis University, illustrates clearly why American children consistently land at the bottom of all international measures of wellness. The Business of Baby: Photo by Jennifer Margulis. When I took my oldest daughter to her six-month well-baby visit at a big pediatric practice on Peachtree Boulevard in Atlanta, the doctors were running behind. At first the baby stood on my lap, holding my hands and bouncing up and down, smiling at the other patients. But as it got closer to naptime, she started to fuss. As the minutes ticked by, her whines became more strident. I walked her around, even taking her outside to look at the cloudless sky. Used to napping in her crib, Hesperus started to sob from fatigue. When it was finally our turn to be seen, I was also close to tears. I explained we had waited for almost an hour and Hesperus was long overdue for a nap. My face felt numb. Hesperus had never needed medication or been sick before this visit. But I waited to give my daughter the antibiotic. After a much-needed nap, the baby was her happy self again. I found out later that if our pediatrician had waited twenty minutes and looked in her ears again when Hesperus was calm, she would not have seen any sign of infection. Because my daughter did not have an ear infection. Middle ear otitis media infections are more difficult to diagnose correctly than you might expect. Behind the eardrum is the middle ear. The doctor made the diagnosis of an infection based on observing the eardrum. Normally the eardrum is white, a semitranslucent membrane covering what looks like a tiny arm. This is actually a bone the malleus or hammer, which picks up sound vibrations. An eardrum may be red or pink because of an infection. But an eardrum may be red or pink for another reason. Since the pediatrician was already running forty-five minutes behind, she needed to get us out of the office as quickly as possible. Pediatricians, like everybody else, want to please their patients. In the United States ear infections are one of the most overdiagnosed and overtreated infections among American children, who collectively receive more than thirty million courses of antibiotics for ear infections each year. One blogger, who disagreed with her point of view, wrote: She is passionate about investigating the overlooked dangers of mainstream practices, especially when scientific evidence has been brushed aside in favor of special interests. Uncovering these issues is a matter of social justice. Margulis is also a regular contributor to Family. Margulis has a B. She was awarded a highly competitive and prestigious Fulbright fellowship in and taught American literature at the University of Abdou Moumouni in Niamey, Niger West Africa for the academic year. A Boston native, Margulis lives in Ashland, Oregon just 15 miles from the border with northern California with her husband and four children.

Chapter 2 : Jennifer Margulis, PhD “ Kindred Media

*Jennifer Margulis, Ph.D., is an investigative journalist, book author, and Fulbright awardee. She is the author of Your Baby, Your Way: Taking Charge of Your Pregnancy, Childbirth, and Parenting Decisions for a Happier, Healthier Family, co-author (with Paul Thomas, M.D.) of The Vaccine-Friendly Plan, and co-author (also with Paul Thomas, M.D.)*

Those who received an antidepressant or placebo did better than those who got only support. An earlier review found antidepressants offered minimal benefit over placebos except in very severe depression, where the benefit was substantial. And a study found antidepressants were no more effective even in severe depression; very depressed people were just less responsive to placebos. You posted a meta-analysis and said it supported your claim “ just dig in a bit and tell us where it did. You read it, obviously, and considered the entirety of the analysis, including the self-described limitations and caveats “ just point us towards where your original citation supported your statement. Anthony Yes I used the word addiction haphazardly. My intention was to convey that many people experience extremely dangerous withdrawal symptoms when trying to come off of SSRIs. Are you saying that the conclusion that the authors reached is off? Or are you saying my understanding of the conclusion of the study is off? And by majority of people I do mean that. Only in severe depression. If you have data to show otherwise, please share it and I am happy to update my model. Perhaps we could start with the stated conclusion of the paper “ do you find error in that, as it is presented in the paper? Anthony The study above found that antidepressants barely did better than placebos except in very severe depression, where the benefit was substantial but a study found antidepressants were no more effective even in severe depression; very depressed people were just less responsive to placebos. Anthony Sure, right here in the conclusion section of the paper. For patients with very severe depression, the benefit of medications over placebo is substantial. So for patients with mild or moderate depression for whom make up the majority of people being diagnosed, by definition that study found antidepressants were minimal or nonexistent. From Kirsch, et al. Drug “ placebo differences in antidepressant efficacy increase as a function of baseline severity, but are relatively small even for severely depressed patients. The relationship between initial severity and antidepressant efficacy is attributable to decreased responsiveness to placebo among very severely depressed patients, rather than to increased responsiveness to medication. You inserted that language in parentheses, but reading the paper, the data do not support that statement. Anthony What does it say? What do you think I think it says? My point was antidepressants of which those are two of the biggest and to the best of my understanding, included in the data set. Roadstergal I do not see where the paper supports your assertion regardless of brand names. Anthony I actually misspoke re: Prozac, the two drugs in the study were Paroxetine and Imipramine, commonly referred to as Paxil and Tofranil. Heidi Yeah, I can see that. Fix your link, and we can read and comment on it. I only see a small open-label Phase II that is not yet recruiting. If MDMA passes clinical trials and becomes part of the accepted treatment paradigm for PTSD, will you then start railing against it as establishment medicine? Again, a very conventional treatment regimen for PTSD. Maps Phase 3 Trials: We just got breakthrough status designation from the FDA, so this is a huge breakthrough for integrating psychedelic medicines into mainstream treatment. Western medicine is world class at crisis interventions like broken bones, heart attacks, etc. Especially because we rarely address lifestyle, relationships or emotional issues. What specific modality did you use? There is a good movie coming out that includes testimonials from soldiers and people in the maps study at <http://> Everyone I know who has had mental health treatment, including me, has had therapy as part of it, that specifically addresses lifestyle, relationship, and emotional issues. Lifestyle is a big part of non-mental health, as well. Every time I go in for a checkup, they check my weight, blood pressure, and other general health labs, and discuss diet and exercise. Zyprexa in combination with therapy. A few recent headlines:

Chapter 3 : Mama, PhD: Women Write about Motherhood and Academic Life - Google Books

*A Compassionate, Holistic Approach to Recovery. by Paul Thomas, MD and Jennifer Margulis, PhD Chances are you know someone who has been affected by addiction. Maybe it's you.*

The Fast Food Nation of the baby industry. What genre does your book fall under? Where did the idea come from for the book? But I always believed you had to travel with disposables. As I started investigating the marketing tactics used by plastic diaper companies I also started questioning my assumptions. Was it really any harder than using disposables? I also found out that the major proponent of delayed potty training in America, a much loved and well-trusted pediatrician, has long had an undisclosed conflict of interest as a paid spokesperson for Pampers. As pregnant women and new parents, we are eager to make changes in our lives. But often the information we get is from people with something they want us to buy. How long did it take you to write the first draft of the manuscript? Who or what inspired you to write this book? Will your book be self-published or represented by an agency? My agent is Gillian MacKenzie. On October 13, the book proposal went to auction. It was bought by Scribner an imprint of Simon and Schuster. They are my publisher. What other works would you compare this book to within your genre? What actors would you choose to play the part of your characters in a movie rendition? Everyone always said my mother looked like Meryl Streep. But neither my dad or mom is in the book beyond the acknowledgments. If the book were turned into a movie, it would be a hard-hitting documentary like Food, Inc. So all the characters 90 percent of the people I interviewed are identified by their real first and last names would be played by themselves. At the end of every chapter is a real-life story: A conservative young mom explains how she changed her mind about breastfeeding; A trained sonogram technician discusses why she believes pregnant women should eschew ultrasounds; A first-time mom shares her decision to leave the obstetric practice and have a homebirth; A military dad of three gives the poop on diapering; and a doctor argues the case against obstetrics. Alisa Bowman yes, she has a new book coming out. She is the author of *Your Baby, Your Way: A Compassionate, Holistic Approach to Recovery*. Follow her on Facebook, Twitter, and Pinterest. Watch her in the series, *The Truth About Vaccines*.

**Chapter 4 : The Next Big Thing: New Books Coming Out and Why You Should Read Them – Jennifer M**

*The Addiction Spectrum A Compassionate, Holistic Approach to Recovery.* by Paul Thomas M.D., Jennifer Margulis PhD. On Sale: 09/04/ Price: \$

A give out personal information like her phone number? I honestly see no point in a live debate. Second, I like that print offers both women the chance to back data and arguments with links to peer-reviewed research, and also the opportunity for readers to cite specific parts of the debate without having to link to a video where viewers have to sift through the footage to get to the relevant parts being highlighted. So many stories in the popular media in the past few days. Young CC Prof My favorite quote from the second: Why are doctors at the second hospital too greedy, stupid or impatient to just let mothers birth as nature intended? If you have to have a C-section, only a fool would want someone other than the best there is. And there probably are a few other types of emergencies in which you know someone will die without a CS. But those are rare exceptions. The Bofa on the Sofa To be honest, I am very leery about recommendations made by the Centers for Medicare and Medicaid Services about rationing of treatment. They are not being made on the basis of best medicine. I want links and careful print. The Computer Ate My Nym you win for having the most vociferous and best organized blog commentators out there I feel oddly complimented by this statement. Actually this is a hive of well informed, passionate people who by virtue of our united goal, the saving of babies, happen to swarm threads where the batlight of ignorance is shining the brightest. If the other side is more organized than you, you lose. Young CC Prof As the military says, no organized force is ever outnumbered by a disorganized force, regardless of the actual numbers involved. She knows perfectly well her popularity is based on an ignorant audience. Mariana Baca Mostly I feel left out of these secret organization meetings. We switched them to Tuesdays at the fallback site. The Primal Birth Warriors were closing in on the original meeting site. Blogging is a much better medium, since people who are inclined to actually think about the facts will be able to find them in a more easily understandable way. As well as we have seen Dr. Amy speak in the past, trying to decipher the message would get lost upon many who are trying to adhere to or keep up with the spin provided by Margulis. Blogging puts the facts to prints and allows time for processing of data and permanent record, whereas live debate will leave content lost on many. I see a live debate going something like when I was 6 years old and dreamed my favorite dog could fly. Oh how I can still see him now, flying through the halls and family room 6 feet in the air. Obviously, my mother tried to correct my comprehension with facts of physics and nature. I just wanted to believe in my own little fantasy world. I see Margulis and the NCB followers lining up to stomp their feet loud enough only to hear what they want to support their little fantasy land. I would suggest YOU should be taking control of the situation and you being the one to suggest how to deliver this debate? Either give her a non private number or ask for her number so YOU can call her? Or at the very least go along with her suggestion at least to prove whether or not she will pull out. Other equally good forums were recommended to Jennifer and she still has not responded. Ashley L You know, there is such a thing as youtube, hangout, facetime, etc. Hey guys, we live in the internet age! Ducky Amy, do you actually want to debate her? Why not pursue this and let her be the one to back off? Improbability of TV coverage or not, right now you look like the one whose bluff got called out. Trixie Of course she wants to debate her. Why else would she write an essay stating that she wants to debate her? Amazed They all seem sincere. Dr Aviva Romm also seemed sincere before flouncing off. Susan I just want to chime in that I DO like the idea of a live face to face debate. We all know that she is accused of being abrasive or MEAN all the time. But that is so NOT the persona of the real live Dr. Tutuer and I think she would just blow anyone she was debating out of the water with her facility with all these facts. Amy gets interrupted constantly. Busbus Maybe someone with experience moderating political debates? Not that I think it works out so well in some political debates. Busbus I agree that the choice of moderator if there is one is crucial. But if it does come to a face-to-face, go on the offensive right out of the gate and shut her down that way. Also keep in mind: Another reason for the NCBers to put it in writing. Mariana Baca What about a compromise between on air and text, and have a series or Youtube postings each? You guys can prepare and have citations, but the verbal format will come

through. Captain Obvious I would just make a post calling her out. Break it out in paragraphs by topic. Start with Homebirth risk, the CPM v. CNM differences, then vaccines, then breastfeeding shaming of. Start with points about each with your views and wait for her to answer them. Then once they finally do sit down you can drill them another birth canal. You can always cross your fingers behind your back when you do. I guess it runs in the family? Amazed Are you surprised? Never heard the chant of homebirth mothers? She has a PhD in music! Life Tip Which is still mind boggling. How someone can come away even from a ph. Amazed Which, of course, makes them experts in delivering babies with their own two hands. Never heard of her before. We really do need a hall of shame. Amazed Damn it, I knew it was a real story and not something I made up to make my point. The problem is when you start using philosophy to answer the first question. Young CC Prof Oh, absolutely. Going to college and ignoring ever single thing you learned in order to rebel against the man? I have heard her name before. Even a layperson knows better. Julia Her mother, Lynn, came up with the endosymbiont theory early in her career i. But she became a HIV denialist later in her life. So you can be both. Young CC Prof Yeah, there are quite a few examples of really groundbreaking scientists who went, um, offtrack, later in their careers.

**Chapter 5 : The mind blowing grandiosity of quacktivists Jennifer Margulis and Kelly Brogan | The Skeptic**

*Every year, American universities publish glowing reports stating their commitment to diversity, often showing statistics of female hires as proof of success. Yet, although women make up increasing numbers of graduate students, graduate degree recipients, and even new hires, academic life remains overwhelming a man's world.*

Similarly, the applicants provide favorite to exercise test. A practice test is communicating and stimulating as associated to pdf material. For example, statistics display; several a scholar who fails the CCNA Routing and Switching Cisco Certified Network Associate, they have no need to fail in the exam after getting prepared with the annoying approaches.
