Chapter 1 : 3 Ways to Save a PDF File - wikiHow

Open the drop-down menu next to Save as type to see a few additional options, such as Word XML Document, Strict Open XML document, and Web Page, Filtered. Choose the format you want and click Save.

My goal is to find solutions to undocumented or unsolved issues to help people out. See the screenshot below? My document contains a picture, it shows up as a small thumbnail, but I need the original high-resolution picture. There are several ways to retrieve or extract images from a Word document. I am going to be listing the top 3 ways to do so in this article. Feel free to use whichever way you want, but expect different results. Here is the article index here: Copying and pasting the image into a picture processing application Alright Saving the document as a web page and retreiving the generated images Nice! Well just open the document in Word and save it as. So here is my file: I am going to rename the file to "products. Now, double click your. In my case, Winrar does the job. If the document still opened with Word, you probably did not read carefully enough -- go back to the part where I say to follow this tutorial. Open the "word" folder as seen in the above screenshot. You should be seeing a "media" folder: These are the original images that were inserted in the documents, regardless of the size in which they appear when viewing your document. Unfortunately, the picture is copied in the same size as it appears in Word. This is obviously not the best way to go, but it can be easier and faster than the first option I described earlier. First, open your document in Word, then save it as a Web page: When offered to select the format, make sure to choose the "Web page" format The "Web page" option on the other hand exports the original images as well as thumbnails. Once the file is saved as a Web page, you will find that two new icons appear in your folder: Open the folder to reveal the images both in original and thumbnail sizes: You can now copy or save those files to other folders of your computer. In my opinion, we should be able to just right-click an image and see a "Save image as

To create documents from a wide variety of templates and presets, introduced in release of InDesign CC, see Create documents. The New Document dialog box combines the Document Setup and the Margins And Columns dialog boxes, so that you can set up the page size, margins, and page columns all in one place. You can change these settings at any time. Specify document setup options. See New Document options. To specify the dimensions of the bleed and slug areas, click the Arrow button before the Bleed and Slug label. The bleed and slug areas extend out from the edges of the defined Page Size. To make the bleed or slug areas extend evenly on all sides, click the Make All Settings The Same icon. Make necessary changes if required. Click OK to open the new document with the settings you specified. New Document options Choose a preset that you have saved earlier. Intent If you are creating a document to be output to PDF or SWF for the web, choosing the Web option changes several options in the dialog box, such as turning off Facing Pages, changing the orientation from portrait to landscape, and using a page size based on monitor resolution. You can edit any of these settings after the document is created. Digital publishing intent has been added for publications aimed for the Digital Publishing Suite. You can also change the intent of the document after it is created. Number of pages Specify the number of pages to create in the new document. Start Page Specify which number the document starts on. If you specify an even number such as 2 with Facing Pages selected, the first spread in the document begins with a two-page spread. See Start a document with a two-page spread. Facing Pages Select this option to make left and right pages face each other in a double-page spread, such as for books and magazines. See Control spread pagination. Master Text Frame CS5. Select this option to create a text frame the size of the area within the margin guides, matching the column settings you specified. The master text frame is added to the A Master. See Using text frames on master pages. When you apply a new master page, the story in the primary text frame automatically flows into the primary text frame of the new master page. Page Size Choose a page size from the menu, or type values for Width and Height. Page size represents the final size you want after bleeds or other marks outside the page are trimmed. Orientation Click Portrait tall or Landscape wide. These icons interact dynamically with the dimensions you enter in Page Size. When Height is the larger value, the portrait icon is selected. When Width is the larger value, the landscape icon is selected. Clicking the deselected icon switches the Height and Width values. To specify the dimensions of the bleed and slug areas, click the Arrow button before the Bleed and Slug label in the New Document dialog box. Bleed The Bleed area allows you to print objects that are arranged at the outer edge of the defined page size. For a page of the required dimensions, if an object is positioned at its edge, some white may appear at the edge of the printed area due to slight misalignment during printing or trimming. For this reason, you should position an object that is at the edge of the page of the required dimensions a little beyond the edge, and trim after printing. Bleed area is shown by a red line on the document. You can set bleed area settings from Bleed in the Print dialog box. Slug The slug area is discarded when the document is trimmed to its final page size. The slug area holds printing information, customized color bar information, or displays other instructions and descriptions for other information in the document. Objects including text frames positioned in the slug area are printed but will disappear when the document is trimmed to its final page size. Objects outside the bleed or slug area whichever extends farther do not print. Make necessary changes to the options if the preview is not as desired. You can also click the Save Document Preset icon to save document settings for future use. Document window overview Each page or spread in your document has its own pasteboard and guides, which are visible in Normal View mode. The pasteboard is replaced with a gray background when the document is viewed using one of the Preview modes. Document and guides in Normal View Mode A. Slug area blue lines Document window notes: Lines of other colors are ruler guides which, when present, appear in the layer color when selected. Column guides appear in front of margin guides. When a column guide is

exactly in front of a margin guide, it hides the margin guide. Create custom page sizes You can create custom page sizes that appear in the Page Size menu in the New Document dialog box. Type a name for the page size, specify page size settings, and then click Add. The New Doc Sizes. Define document presets You can save document settings for page size, columns, margins, and bleed and slug areas in a preset to save time and ensure consistency when creating similar documents. Click New in the dialog box that appears. Specify a name for the preset and select basic layout options in the New Document Preset dialog box. See New Document options for a description of each option. You can save a document preset to a separate file and distribute it to other users. To save and load document preset files, use the Save and Load buttons in the Document Presets dialog box. Create a document using a preset Do one of the following: Hold down the Shift key while choosing the preset to create a new document based on the preset without opening the New Document dialog box. The New Document dialog box displays the preset layout options. To skip the New Document dialog box, press the Shift key as you select a preset from the Document Preset menu.

Help return this historic aeroplane to the skies where she belongs! Our aeroplane in all her glory! Allan Vogel is leading a team who believe that this aircraft is of particular importance and has served as a true Workhorse in three major Global Conflicts namely World War 2, Korean War and the Vietnam War. In she made her way to England together with another DC4 to feature in a film about the Berlin Airlift. She has an incredible story to tell spanning her 30 years of military service and her time as an Agricultural Workhorse too. There is exfoliation corrosion in several areas of the upper spar caps of both mainplanes. The section shown above is on the outer Right mainplane main spar just outboard of the transport joint rib. The corrosion will need to be removed, the amount of material which has been removed will be assessed and a repair plate fitted. Other areas of the spar caps have previously been repaired as this is a well-known problem with Aluminium Alloy forgings. The repair will need to be referred to Boeing who now hold the historical rights to the Douglas design office. We hold historical reference documents which appear to prohibit repairs to the spar caps inboard of the engine nacelles, further research indicates that it is splice repairs which are not allowed rather than corrosion removal. We have entered into discussion with Cranfield Aerospace who have agreed in concept there will be no problem with the repairs. Each repair is estimated to take a minimum of two weeks to accomplish, there are six areas of corrosion. A limited inspection of the spar webs has been carried out in the centre section and inside the inboard engine nacelles. No obvious defects were found and the spar webs and booms appear to be sound. The skins are secured to the structure using Magnesium Alloy rivets. Over long periods the structure of the rivet is weakened and the rivet will fail as has happened in the above picture in the area of the right wing outer mainplane transport joint. The repair for this will be to remove the failed rivets and replace with modern alternative. There is also evidence of corroded structure below the skin as evidenced by the skin swelling up which will require further inspection and investigation. A conservative estimate would be that the repairs would take between eight and twelve weeks to complete. We have talked to Anderson Aeromotive who overhaul these engine in the United States. They have set the time between overhaul at hours. The engine condition is monitored through oil consumption, once oil consumption rises above a maximum amount the engine is in need of attention. Because these engines have not flown in more than twelve years they will need to be dismantled and a thorough inspection carried out by an authorised repair organisation. Historically the engines have run very well with anti-deterioration runs being carried out until recently. In March FAA STC was raised to replace R with R engines this modification has been carried out in the number 2 position and it is possible to modify the remaining engines to this standard. There is a spare engine in the fuselage which may be used as a source of spares or possibly overhauled and returned to service. We have purchased an additional low time 50 hrs since overhaul engine. A plan for the examination of the four installed engines and the spare engine has been prepared by Weald Aviation Ltd. It has been recommended that the props are removed and overhauled before the engines are started. Avionics There is a full set of VFR avionics fitted but they will need to be updated to a modern standard. An agreement is in place for the overhaul and upgrade of the historic avionics and installation of a modern avionics fit from a private sponsor. The fabric covered control surfaces are in a poor state of repair and will need to be recovered. Despite being open to the elements for some considerable time the internal structure appears to be sound. There are several specialist companies in the U. Hydraulic components and Landing gear. As with the engines the components of the hydraulic system and the landing gear will have to be overhauled and certified by a recognised repair organisation. Once again we have several offers of support from companies in the U. The first priority would be to get the aircraft into a state where it could be moved, wheels and jacks are readily available. Before we can start any work we need to be sure that we know who our landlords are going to be for the duration of the project and that parking is paid for. Once the aircraft has a secure home we will remove the propellers, engines

and flying controls and send them away for repair or overhaul. The aircraft can then be jacked up and trestled, so that components can be removed from the undercarriage and hydraulic systems to be sent away for repair. A temporary structure will need to be constructed to give the workforce some protection. Then the work can begin to sort out the corrosion issues with the spar caps and structure. With a good team and assuming not too many nasty surprises are found once we start to get into the repairs this should take about four months. Consecutively with the corrosion repairs there will be a program of inspection agreed with the F. We hold a record of the previous F. As we come to the end of the corrosion repairs and inspection we expect the components to start to return from repair. Re-build and setting up the controls and components will probably take two to three months. The target would be to have the aircraft ready for airtest within six or seven months. With the aircraft probably being in demand for the airshow season which is the 70th anniversary of the Berlin Airlift. We have been invited to Berlin in June for an event to commemorate the anniversary of the end of the airlift. The aircraft will continue to be operated in the scheme which it has carried since its return to the airshow circuit in America. The scheme will be changed slightly to reflect s long association with the Pacific theatre. There is no decision yet on where to base the aircraft once she has been returned to flight.

Matthew Guay April 14, , 6: Microsoft changed the default font font to 11 point Calibri in Word after years of 12 point Times New Roman being the default. Although it can be easily overlooked, there are ways in Word to change the default settings to anything you want. Changing Default Fonts in Word To change the default font settings, click the small box with an arrow in the lower right corner of the Font section of the Home tab in the Ribbon. In the Font dialog box, choose the default font settings you want. So, if your style uses Calibri, then your font will be Calibri at the size and style you chose. Here we left all the default settings, except we selected 12 point font in the Latin text box this is your standard body text; users of Asian languages such as Chinese may see a box for Asian languages. You will be asked to confirm that you want these settings to be made default. In Word , you will be given the option to set these settings for this document only or for all documents. In Word , simply click Ok to save these settings as default. Now, whenever you open Word or create a new document, your default font settings should be set exactly to what you want. And simply repeat these steps to change your default font settings again if you want. Editing your default template file Another way to change your default font settings is to edit your Normal. This file is what Word uses to create new documents; it basically copies the formatting in this document each time you make a new document. To edit your Normal. Right-click on the Normal. Do not double-click on the file, as this will only create a new document based on Normal. Now, change any font settings as you normally would. If you want to revert to your default settings, simply delete your Normal. Word will recreate it with the standard default settings the next time you open Word. Changing your default font size will not change the font size in existing documents, so these will still show the settings you used when these documents were created. Also, some addins can affect your Normal. If Word does not seem to remember your font settings, try disabling Word addins to see if this helps. Getting your default font settings the way you want is a great way to take away a frustration and make you more productive. Do you prefer the new default 11 point Calibri, or do you prefer 12 point Times New Roman or some other combination? Sound off in the comments, and let the world know your favorite font settings.
