Announcements for upload progress. Announcements for file name and file types when browsing folder and file lists. Fixed use of color issues for views switcher. Updates to the Help documentation. SharePoint also supports TLS 1. Note A security vulnerability was identified in the SSL 3. SharePoint disables SSL 3. To ensure that SSL 3. For more information, see the "Disable SSL 3. These restrictions are removed in SharePoint Server and are now available to use. Page file names, such as wiki pages, may not contain the following characters: Hybrid sites Hybrid sites features allows your users to have an integrated experience while using SharePoint Server and SharePoint Online sites: Users have a single profile in Office , where all of their profile information is stored. For more information, see SharePoint hybrid sites and search. Users can sync files with Office and share them with others. Users can access their files directly through Office from any device. Cloud hybrid search Cloud hybrid search is a new hybrid search solution alternative. With cloud hybrid search: You index all of your crawled content, including on-premises content, to your search index in Office When users query your search index in Office , they get unified search results from both on-premises and Office content. For more information about cloud hybrid search, see the public Microsoft cloud hybrid search program on Microsoft Office connection. For more information about the hybrid solutions available today, please visit the SharePoint Hybrid Solutions Center. Identify and search for sensitive content in both SharePoint Server and OneDrive documents With this new capability, you can: Leverage 51 built-in sensitive information types credit cards, passport numbers, Social Security numbers, and more. Use DLP Queries from the eDiscovery site collection to discover sensitive content relating to common industry regulations from the SharePoint eDiscovery Center, identify offending documents, and export a report. Turn on DLP Policies from the Compliance Policy Center site collection to notify end users and administrators when documents with sensitive information are stored in SharePoint and automatically protect the documents from improper sharing. Information on configuring and using this feature is documented in SharePoint Online and Office For more information, see: Use DLP in SharePoint Online to identify sensitive data stored on sites Image and video previews In SharePoint Server when you post images and videos to a document library, you can see a preview by hovering the mouse over the image or video, or by clicking on them. Large file support Previous versions of SharePoint did not support uploading or downloading files larger than 2, MB. SharePoint Server now allows you to upload or download larger files. You can configure the desired maximum file-size limit on a per-web application basis in your SharePoint farm. MinRole farm topology The role of a server is specified when you create a new farm or join a server to an existing farm. SharePoint automatically configures the services on each server based on the server role, optimizing the performance of the farm based on that topology. There are eight predefined server roles that are available, as shown in the following table. Server role Description Front-end Service applications, services, and components that serve user requests belong on front-end web servers. These servers are optimized for low latency. Application Service applications, services, and components that serve back-end requests, such as background jobs or search crawl requests, belong on Application servers. These servers are optimized for high throughput. Distributed Cache Service applications, services, and components that are required for a distributed cache belong on Distributed Cache servers. Search Service applications, services, and components that are required for search belong on Search servers. Custom Custom service applications, services, and components that do not integrate with MinRole belong on Custom servers. The farm administrator has full control over which service instances can run on servers assigned to the Custom role. MinRole does not control which service instances are provisioned on this role. Single-Server Farm Service applications, services, and components required for a single-machine farm belong on a Single-Server Farm. A Single-Server Farm is meant for development, testing, and very limited production use. The SharePoint administrator must also configure the SharePoint farm services and web applications, either

manually or by running the Farm Configuration Wizard. Front-end with Distributed Cache Shared role that combines the Front-end and Distributed Cache roles on the same server. Application with Search Shared role that combines the Application and Search roles on the same server. Mobile experience When you use a mobile device to access the home page for a SharePoint Server team site, you can tap tiles or links on the screen to navigate the site. You can also switch from the mobile view to PC view, which displays site pages as they are seen on a client computer. This view is also touch enabled. New controls for working with OneDrive for Business You can click a control to create new Office documents, upload files, synchronize your files for offline use, and share your files. Now project managers can request needed resources from resource managers to complete their projects. Also, resource managers can use the new heat map functionality to see where resources are spending their time. Project and Portfolio managers can now create richer timelines that display multiple timelines in a single view. Project Server now has multi-tenant storage capabilities and has combined data storage with SharePoint. This greatly reduces IT overhead by eliminating the dedicated Project Server database and improves backup and restore capabilities. Cloud grade performance and scale: Many performance and scalability improvements that have been added to Project Online have also been added to Project Server For more information about Project Server licensing, see [Licensing Project](#). Request Manager service improvements SharePoint Request Manager now provisions on the server roles shown in the following list, to support both throttling and routing scenarios: Application Distributed Cache Front-End Additionally, the Request Manager service will no longer prevent sites from rendering when the service is enabled while you have no routing rules defined. Sharing The following list shows the sharing improvements that are available for SharePoint Server For more information, see [Overview of search architecture in SharePoint Server](#). For information about SharePoint cloud hybrid search, see [Learn about cloud hybrid search for SharePoint](#). The following command parameters are now available to use: Site collection upgrades There are three options available for upgrading site collections. For more information, see [Upgrade a site collection to SharePoint Server](#) The SMTP server must have a server certificate installed. The server certificate must be valid. Typically, this means that the name of the server certificate must match the name of the SMTP server provided to SharePoint. The server certificate must also be issued by a certificate authority that is trusted by the SharePoint server. It will not fall back and send email messages unencrypted if connection encryption negotiation fails. SMTP requests are always sent anonymously. Sites page pinning You can now pin sites that you see on the sites page. Suite Navigation is themable You can now apply themes to your Suite Navigation.

Chapter 5 : 50+ High DA Free Video Submission Sites list , Video Sharing Sites

Learn what's new in SharePoint Server , such as new mobile app, app launcher, improved sharing, document library updates, and document management improvements premiered in SharePoint Online in Office and brought to SharePoint Server

SharePoint Server More Less SharePoint Server is evolving with features designed to be familiar, intuitive, and built for the way you work. Are you an IT Pro? See New and improved features for IT Pros. That means OneDrive for Business gets the updated look and functionality from Office The commands to do things like upload, share, and sync are now up near the top of the page. From supported browsers, such as Microsoft Edge and Google Chrome, you can now upload folders as well as files from the Upload menu. Also, you can now open pictures and videos in the OneDrive experience, and use arrow keys to preview all supported files in a folder. SharePoint mobile apps The SharePoint mobile apps are a new way to reach intranet content on your devices. You can download and install the app from the app store on your device. After you login to SharePoint Server , you can navigate SharePoint sites, view links to sites your organization has marked as important, view people profiles and search for people, sites and documents. Apps for Windows and Android will follow. Improved support for mobile browsers On mobile browsers, SharePoint Server sites offer a consistent experience across screens and devices. When you use a browser on a mobile device to access your sites, you can more easily browse your sites, subsites, and content on those sites through touch-enabled views. For example, you can tap tiles or links to your libraries, open files, browse to other sites and quickly get to OneDrive. You can also switch from the mobile view to see site pages in the full web view that you would see on a desktop computer. Use the app launcher to quickly launch an application, browse sites and access your personal files. When you click or tap the app launcher icon , you get a menu of apps and services in tiles like this: Improved sharing experiences SharePoint Server has the following enhanced sharing experiences: The people you just shared with will get an email invitation with a link to the site. Part of sharing is also understanding who can see something. Users can also grant the permission they have on a file or folder to other people. Internal people have the option of clicking the guest link and accessing the site or document without having to sign in, and external people who receive a guest link have a one-time redemption link that they can use to access the site or document. The admin receives a one-click email to approve or deny a request for access. See Share ideas, sites, and content for more info on sharing. Document library features The following accessibility features are now available to make working in document libraries easier: Landmarks to a page for ease of navigation, and alt text improvements for all major navigation links. Keyboard shortcuts to do the following tasks without having to use the ribbon:

Top 30+ Free Video Sharing Sites List Submit videos to these video sharing sites to build high-quality backlinks & drive massive traffic to your blog. Create some videos related to your blog topics and submit them to these video sharing sites including your blog/site URL.

Social media networks are a major resource for both small and big businesses that are looking to promote their brands on the Internet. And figuring out the most popular social media sites for the audience you are trying to reach is extremely important. To properly utilize the power of social media, you need to know the most popular social media sites and identify the ones that work best for your business to avoid spreading yourself too thin. The platforms are easy to use and some of them even have paid advertising options for businesses that want to reach new audiences. To make this easy for you, we profiled 20 of the most popular social media sites so you can make informed marketing decisions.

Most Popular Social Media Sites

Facebook This is the biggest social media network on the Internet, both in terms of total number of users and name recognition. Founded on February 4, , Facebook has within 12 years managed to accumulate more than 1 billion users. It is estimated that more than 1 million small and medium-sized businesses use the platform to advertise their business.

Twitter You might be thinking that limiting your posts to 140 characters is no way to advertise your business, but you will be shocked to know that this social media platform has more than 200 million active monthly users who make use of the character limit to pass on information. Businesses can use Twitter to interact with prospective clients, answer questions, release latest news and at the same time use the targeted ads with specific audiences. Twitter was founded on March 21, , and has its headquarters in San Francisco, California.

LinkedIn Founded on December 14, , and launched on May 5, , LinkedIn is hands-down the most popular social media site for professional networking. The website is available in 24 languages and has over 100 million registered users. LinkedIn is great for people looking to connect with people in similar industries, networking with local professionals and displaying business related information and statistics. Its SEO value alone makes it a must-use tool for any small business.

YouTube YouTube is the largest and most popular video-based social media website and was founded on February 14, , by three former PayPal employees. YouTube has over 1 billion website visitors per month and is the second most popular search engine behind Google.

Pinterest Launched in March , Pinterest is a relatively newcomer in the social media arena. This platform consists of digital bulletin boards where businesses can pin their content. Pinterest announced in September that it had acquired 10 million users. Small businesses whose target audience is mostly made up of women should definitely invest in Pinterest as more than half of its visitors are women.

Instagram Like Pinterest, Instagram is a visual social media platform. The site, launched on October 6, , has more than 100 million active users and is owned by Facebook. Many of its users use it to post information about travel, fashion, food, art and similar subjects. The platform is also distinguished by its unique filters together with video and photo editing features. Almost 95 percent of Instagram users also use Facebook. The platform allows several different post formats, including quote posts, chat posts, video and photo posts as well as audio posts, so you are never limited in the type of content that you can share.

Like Twitter, reblogging, which is more like retweeting, is quick and easy.

The social networking website was founded by David Karp in February and currently hosts more than 100 million blogs.

The platform is popular with users who share and embed photographs.

As of October last year, Flickr had more than 100 million users and had its footprint in more than 63 countries.

An average of a million photos are shared daily on Flickr.

Reddit This is a social news and entertainment networking website where registered users can submit content such as direct links and text posts. Submissions with the most positive votes appear in the top category or main page. A decade later, the site boasts more than 36 million registered accounts and 10 million monthly visitors.

Snapchat Snapchat is an image messaging application software product that was created by Reggie Brown, Evan Spiegel and Bobby Murphy when they were students at Stanford University. The app was officially released in September , and within a short span of time they have grown immensely registering an average of 10 million daily active users as of May . More than 18 percent of all social media users use Snapchat. The app relies on the Internet to send images, texts, documents, audio and video messages to

other users that have the app installed on their devices. Today, more than 1 billion people use the service to communicate with their friends, loved ones and even customers. Quora Capitalizing upon human curiosity is an ingenious idea that would lead to the creation and launch of Quora in June, Vine With over 40 million users, Vine is a rapidly growing video sharing social media app that allows users to share 6-second video clips with their followers. While this looks like a really short time for a video, businesses of all sizes are having tremendous success using the service. Vine was founded in June and later acquired by Twitter in October , just before its official launch. Periscope Periscope is a live video streaming mobile app that was developed by Joe Bernstein and Kayvon Beykpour. BizSugar BizSugar is a social networking platform and niche resource for small business owners, entrepreneurs and managers. The platform allows users to share videos, articles, blog posts, podcast among other content. It also allows users to view and vote on submissions by other members. StumbleUpon StumbleUpon is a discovery engine that finds and recommends content for its users. Come June 30, , it will be moving to Mix. More than 25 million people use StumbleUpon for entertainment and information. It is now an independent, investor-backed startup once again. Delicious This is a social bookmarking web service for discovering, storing and sharing web bookmarks. By the end of , Delicious claimed that it had bookmarked million URLs and acquired more than 5. In January this year, Delicious Media said that it had acquired the service. Digg Founded more than a decade ago November , Digg is a news aggregator with a curated front page that selects stories specifically for the Internet audience, The topics vary widely from trending political issues to science to viral Internet issues and anything in between. Digg supports sharing of content to other social media platforms such as Facebook and Twitter. In , the company claimed that it had about 11 million active monthly users. As of April , Viber had accrued close to million registered users and monthly active users. Which social media site is your favorite?

Chapter 7 : List of image-sharing websites - Wikipedia

Most Popular Document Sharing Sites List. 2 - Google drive We can store Our File Free of blog.quintoapp.com Drive is one of the popular file sharing WebApp provided by the Google.t provide 15 GB space for free.

I asked for your thoughts on my suggested alternatives and other recommendations that you had. I got more than I bargained for in your comments. I quickly realized that I had left many great sites out of my abbreviated list. Due to all of your great suggestions, I felt that you deserved a more complete list of photo sharing sites. Read on for 45 ways to share your photos. Animus3 â€” Free photoblog hosting. Unlimited images and bandwidth. Search engine optimization for your photos. The dream became reality in the form of a photoblog community website developed by Aaron Schmidt. Originally consisting of just a few friends, the site now encourages creative photographers from around the world to connect, learn and display their photography on a daily basis. Art Limited â€” Photos, art and critics galore. This site is for artists, models and critics who propose creative, personal and original high quality work which is recognized and appreciated. As you can see, DeviantART is more of an art community than a photo sharing site. And it is a very active community with tons of chat rooms and forums to chime in on. Read more on 7 Alternatives to Flickr 5. DropShots â€” Hails itself as a next generation photo and video sharing site. DropShots looks and works kind of like a desktop application. Flickr â€” Flickr is great for sharing photos for free. The community features on Flickr are very deep and part of what makes Flickr so successful. Groups are one of the easy ways to get involved in the Flickr community. When you have a free Flickr account, you can upload MB worth of photos each calendar month. This is a bandwidth limit, and not an amount of space that you have on Flickr servers. Read more on the 7 Alternatives to Flickr article 7. FocalPower â€” Currently in a closed alpha phase, but it shows promise. Solving the current problems of photo hosting and online photo management to help photographers advance their work online. Reduce the Work of Sharing Photos Online: Upload Once, Share Everywhere! Integrates into Your Workflow 8. While Fotki is easy to use, it has a lot of different options that can be overwhelming at first. Read more on 7 Alternatives to Flickr 9. Fotolog â€” Kind of Flickr meets MySpace. Gallery 2 â€” is an open source photo album organizer packed with a ton of options for websites. Gallery is a web based software product that lets you manage your photos on your own website. You must have your own website with PHP and database support in order to install and use it. With Gallery you can easily create and maintain albums of photos via an intuitive interface. Photo management includes automatic thumbnail creation, image resizing, rotation, ordering, captioning, searching and more. Albums and photos can have view, edit, delete and other permissions per individual authenticated user for an additional level of privacy. Each anomalous profile offers ample views of photography, art, film, writing or music. By creating a profile, one can upload, maintain and manage not only a community of friends and family, but also a vantage point to share your own artistic creations â€” in whichever form they may abound. The premium version allows you to store images. The pro-premium is unlimited. ImageEvent allows you to upload in a variety of ways â€” everything from a single file upload, to using ftp or even. You can also share a ton of other file formats, including videos and even documents. You can sign up for a free day trial to take it for a test drive. Ipernity â€” Share whatever you want with whoever you want â€” photos, videos, audio, docs. Currently in beta and free to join. Kodak Gallery â€” Commonly known as a source for cheap prints for your snapshots. You can also get unique domain, such as www. Unlimited download bandwidth applies to both plans. Koffee Photo â€” Software and online hosting combined into one. KoffeePhoto software helps you create and manage photo albums on your computer. Every album you create gets its web page allowing you to browse and share your photos from anywhere. Album hosting and photo sharing is unlimited and free. KoffeePhoto automatically synchronizes your high resolution pictures across your different computers and with your sharing fellows. In case of data loss KoffeePhoto recovers your whole photo library in one click. KoffeePhoto provides direct print ordering through partner services while simplifying the process of uploading the pictures. Multiply â€” For true multimedia types. Multiply gives you an easy way to share all kinds of digital media, including photos, blogs, videos, music and more, all in one convenient place: Your personal web site on Multiply â€”

http: No longer do you, or your friends and family, need to learn how to use separate sites and keep track of separate IDs, passwords, and links. My Photo Album â€” Another unlimited photo hosting option. My Photo Album also permits video hosting. Also good for bloggers and socialites on the likes of MySpace and Facebook for its integrated sharing. There are quite a few typos in the copy of the pages that I browsed through, along with some browser compatibility issues, which makes the site and service seem kind of amateurish. Interestingly, the main page features a banner seeking current Flickr users and provides instructions on how to migrate your Flickr account to My Photo Album. One True Media â€” A very Web 2. Makes slideshow and video montages, among other things like photo books and ecards. Not really a photo hosting solution, but if you need to feature a slideshow on your blog, it could be an option. PBase â€” PBase does not offer a free account option. Additional storage can be added at any time in increments of MB. There is also a PBase forum community that users can participate in. PBase users also publish a professional looking magazine, aptly named PBase Magazine, that has a pretty cool history. Phanfare â€” Very family oriented with security features as a headline offering. With Phanfare, your photos and videos are beautifully presented on the web for your friends and family to enjoy, ad-free. From wedding bells to the arrival of a new baby, Phanfare has the perfect album style to showcase all of your treasured photos and videos. The blazing fast uploads mean that your albums will be ready to be shared within moments. Phanfare stores your full-size photos and high-quality videos. Download these images and videos as often as you like. All Phanfare members can store up to 1GB of photos and videos for no charge. It is a huge community of amateur and professional photographers with a variety of skill levels and photographic experiences. You can upload your photos and submit them for comment and critique. You get your own gallery to post photos into. Additionally, you can participate in the very active and moderated forums. I still find myself reading the forums and asking the occasional question when I need some advice on a particular matter. Photobucket â€” Photobucket is a media management site for photos and video. It is clearly geared toward the social media user. You can use Photobucket to create slideshows of photos and video mashups. Additionally, free accounts are limited to 25GB of monthly bandwidth. PhotoSIG â€” Another more serious photography community. The worthiness, or unworthiness, of photos and critiques submitted by users is determined by the user community. Users have the opportunity to comment, favorably or unfavorably, on photos and on critiques submitted by other users. Photoworks â€” Supporting both film and digital, Photoworks offers services that appeal to those who like Kodak Gallery. That sentence makes me feel older than I want to. Photrade â€” Share Photos. Choose the services you want to use â€” they are all optional and all free we charge a commission on sales. From a user experience perspective its as simple as uploading your images and setting your prices. The ad revenue sharing is probably the most unique part of the site. Users earn ad revenue from 3 sources. First, ad revenue is earned from ads hosted in the galleries currently google ads on the left and right banners â€” we payout on a CPM basis every time a photo gallery is viewed not real time payouts â€” we do periodic deposits.

Chapter 8 : List of video hosting services - Wikipedia

Here are the best video sharing sites list for ready reference which will save precious time of SEO professionals, creative minded people, business houses, small manufacturers and many other professionals.

In other words, Torrent is basically a file extension for Torrent Clients. These files contain text and point it to trackers to start download from seeders those who uploaded the file as well as leechers those who download the file. Therefore, the speed of downloading of any torrent file depends upon leechers, seeders as well as number of peers. Many people download most of the data from the torrent sites, as it is one of the best places for free download of movies, videos, games, software etc, no matter whether it is banned or pirated. Torrents are the big network, it is possible to circulate any file across any country in overnight using Torrents. It is essential to know about the torrent and best torrent download sites to make use of it in the right way. Like we are giving out our choice of best torrent website for you ease. The top torrents list has seen some huge changes through due to various reasons. Given below are the top 10 torrent websites of , according to various traffic reports and Alexa Traffic Rank. It surpassed The Pirate Bay in traffic last year. It offers download the torrent files in categories like movies, music, software, anime and others. Over the years, this site has burned through a few different domain names while combating various censorship efforts. In the recent past, it had to switch to a Costa Rican. In the past, it was the king of torrent site and one of the main piracy icons. However, it was able to quickly lure millions of users after it made a successful comeback operating from a hydra of domain names until last week. One of the most active torrent communities, Extra Torrent offers easy search for torrent through their catalog in categories. TORRENTZ Torrentz is a meta-search engine for BitTorrent that indexes torrents from various major torrent websites and offers compilations of various trackers per torrent that are not necessarily present in the default. So, when a tracker is down, other trackers can do the work. It was the second most popular torrent website in and again in Torrentz does not host any torrent files or magnet links, but redirects visitors to other places on the web. The site uses several domain names with. Last year, the site was blocked by UK ISPs, which put it on the same level with most other sites in the top Basically, this site is based on community, where people share best torrent files for free download. It indexed in large database from many torrent sites like torrentz, torrentdb etc. Most of traffic of this site comes from UK and liked by UK users a lot. The coming year it will become clear whether x can keep its status into The site continues to operate under new ownership and releases its own torrents now. This site has been around since the last decade but is a newcomer in the top This site has more than 85 lakh torrent files and with more than 40 crore seeds. It has also been on the radar of copyright holders this year. On Homepage, you can check out most downloaded torrent files, which contain latest movies, games etc. The torrent site is blocked in several countries and was reported as a piracy haven to the U. Files database of this site is increasing at very sharp rate. The site provides you quality torrents with magnet links as well. Also the popular Popcorn Time had to shut down due to similar reasons. The Australian admin ran into legal trouble.

Chapter 9 : New and improved features in SharePoint Server | Microsoft Docs

New features in November PU for SharePoint Server (Feature Pack 1) The November Public Update for SharePoint Server (Feature Pack 1) offers seven new features for SharePoint Server For more information, see New features in November PU for SharePoint Server (Feature Pack 1).

The custom permission level will be scoped to the site collection, and therefore you need to navigate to the top level site within the site collection in order to create a custom permission level. An example of a custom permission level may be something in-between Contribute and Read. You may for example want your users to be able to create, read, and edit content, but not delete any content. You can copy an existing permission level, provide it with a name, and then refine the permissions assigned to the permission level. To create a custom permission level: Navigate to the top-level site within your site collection. Choose Site Actions, Site Settings. Click the Permission Levels button in the Manage category of the Permissions tab. Provide a Name and Description for your custom permission level. Deselect the permissions that you want to remove, or add more permissions. In this example, we will remove the Delete Items and the Delete Versions permissions. You now have your own custom permission level which we will also make use of in the next section when creating groups. It is important that you should never alter an out-of-the-box permission level. This will lead to confusion between different site collections. Always create your own custom permission level. SharePoint Groups As well as the default SharePoint Groups within a SharePoint Team Site, it is also possible to create your own groups and assign different permissions to those groups to objects within the site collection. An important thing to note is that you cannot nest SharePoint Groups. The Sales SharePoint Group would have to be assigned a permission level. That is one advantage of an Active Directory Group. Furthermore, it is possible to nest AD groups at the Active Directory server. The default SharePoint Groups are very useful to assign permissions to a local object such as the site, a list or library, folder or item. We know that adding users to a members group will typically give the users Edit permissions, and adding them to the Visitors group will give them Read permissions. However, I can use that same Active Directory Group and add it to a Visitors SharePoint Group site even in another site collection, and the same group of people would receive Read permissions. An advantage though to creating your own SharePoint Groups is that you as a user can manage the membership, whereas with AD Groups, the membership is maintained by IT. To create your own SharePoint Group: From any site within the site collection, choose Site Actions, Site Settings. Click More on the left hand navigator. Click New, New Group. Provide a name and a description for your group. Make this as descriptive as possible. That way other Team Site Owners may make use of your group rather than duplicate it. Set the Group Owner. Firstly, make note of the options that come after the Group Owner field. The options beyond the Group Owner field specify who can alter the membership of the Group. The default is the Group Owner. So, think what will happen if this group owner was to leave the organization? That would mean that nobody can modify the membership of this group. You also cannot add more than one user to the Group Owner field. The Group Settings section contains two sections; Who can view the members of the group and who can edit the membership of the group. The default is set to No. Membership requests can be automatically accepted. Again the default is No. You can set the email address of the user who will accept or decline the group membership request. You can then specify what permissions the Group will have to the current site. This is optional, and keep in mind that you can assign it different permissions to another site. Take note that you can also assign it the custom permission level that we created earlier. Upon clicking Create, your group will be created and you can begin to add members to it. You can assign permissions to the group anywhere within the current site collection. Remember that when you Share permissions to the site, the users by default are added to the members group which has Edit permissions. Giving everyone Edit permissions is not good. So, this is a way to be able to assign permissions lower than Edit by default when users are invited to the site via Share. They control who are members of what groups and would need to be kept informed of any staffing changes to your departments. If your AD groups are not kept up to date, you should consider using SharePoint Groups as an alternative. Active Directory Groups offer a single point where users can be

removed which effectively changes their permissions throughout SharePoint. For example, if a user changes departments, or is new to a department, permissions can be granted simply by adding the user to the appropriate AD group. Another advantage to the AD Groups is that they can be used in any site in any site collection across the SharePoint Farm, whereas SharePoint Groups are scoped to the site collection. The major advantage of SharePoint Groups is that they can be controlled by the users. Members can be added and removed without the need to make any change requests to IT. For that reason, it is difficult to know whether the correct people have the correct permissions to a given object.
