

Chapter 1 : Sherlock Holmes's War of the Worlds - WikiVisually

Sherlock Holmes's War of the Worlds is a sequel to H. G. Wells's science fiction novel *The War of the Worlds*, written by Manly Wade Wellman and his son Wade Wellman, and published in

Mashups seem to have become exceedingly common in recent years, but it is worth noting that they have been around for quite some time! The title pretty much makes it obvious, but nevertheless I will explain the premise of the book: Is it a titanic battle of mind versus monster? From this idea grew the kernel of a story; Wade Wellman was primarily a poet, however, so he turned to his father Manly to help him develop the concept further. Manly Wade Wellman was, in retrospect, the perfect person to write such a story. FASHWW was originally printed as a series of magazine short stories and later coalesced into a novel. *The Adventure of the Crystal Egg*. In the course of an investigation, Holmes comes across a mysterious crystal object, which seems to allow him to see another world. He calls his friend Professor Challenger to help investigate. *Sherlock Holmes Versus Mars*. *The Adventure of the Martian Client*. As the war winds down, Holmes and Challenger launch a risky plan to gain the upper hand. Venus, Mars, and Baker Street. The war is over; the Martians defeated! Yet there is still intrigue that has emerged from it, both on Earth and on other planets. The book is utterly charming, and the Wellmans manage to capture the voices of Holmes and Challenger very well. It is worth noting, though, that the story does not feature a titanic battle of wits between the invaders and Holmes, as the title might imply. This means that Holmes, Watson and Challenger are all relegated to being relatively minor characters in the story, and most of their time is occupied with observation, conversation, and survival more than direct action against the invaders. Wells wrote *The War of the Worlds* in , speculation about possible life on Mars was still very popular, even though the scientific evidence already found it unlikely. Wade and Manly use this to have some fun at H. Furthermore, they have Doctor Watson referring to H. As I have noted, though, it is much more low-key than the subject matter would perhaps suggest. Fans of Arthur Conan Doyle and fans of H. Wells will find something to enjoy in this book.

THE ADVENTURE OF THE MARTIAN CLIENT By John H. Watson, M.D. Mr. H. G. Wells' popular book, *The War of the Worlds*, is a frequently inaccurate chronicle of a known radical and atheist, a boon companion of Frank Harris, George Bernard Shaw, and worse.

Science fiction “ Science fiction often explores the potential consequences of scientific and other innovations, and has been called a literature of ideas. Science fiction is difficult to define, as it includes a range of subgenres and themes. Author and editor Damon Knight summed up the difficulty, saying science fiction is what we point to when we say it, a definition echoed by author Mark C. Glassy, who argues that the definition of science fiction is like the definition of pornography, you do not know what it is, in or William Atheling Jr. According to science fiction writer Robert A. Rod Serlings definition is fantasy is the impossible made probable. Science fiction is the improbable made possible, Science fiction is largely based on writing rationally about alternative possible worlds or futures. Science fiction elements include, A time setting in the future, in alternative timelines, a spatial setting or scenes in outer space, on other worlds, or on subterranean earth. Characters that include aliens, mutants, androids, or humanoid robots, futuristic or plausible technology such as ray guns, teleportation machines, and humanoid computers. Scientific principles that are new or that contradict accepted physical laws, for time travel, wormholes. New and different political or social systems, e. A product of the budding Age of Reason and the development of science itself. Isaac Asimov and Carl Sagan considered Keplers work the first science fiction story and it depicts a journey to the Moon and how the Earths motion is seen from there. Later, Edgar Allan Poe wrote a story about a flight to the moon, more examples appeared throughout the 19th century. Wells *The War of the Worlds* describes an invasion of late Victorian England by Martians using tripod fighting machines equipped with advanced weaponry and it is a seminal depiction of an alien invasion of Earth. In the late 19th century, the scientific romance was used in Britain to describe much of this fiction. This produced additional offshoots, such as the novella *Flatland*, the term would continue to be used into the early 20th century for writers such as Olaf Stapledon. In the early 20th century, pulp magazines helped develop a new generation of mainly American SF writers, influenced by Hugo Gernsback, the founder of *Amazing Stories* magazine. All but one are set in the Victorian or Edwardian periods, though not the first fictional detective, Sherlock Holmes is arguably the most well-known, with Guinness World Records listing him as the most portrayed movie character in history. Auguste Dupin is generally acknowledged as the first detective in fiction and served as the prototype for many that were created later, Conan Doyle once wrote, Each is a root from which a whole literature has developed. Where was the story until Poe breathed the breath of life into it. Like Holmes, Bell was noted for drawing conclusions from minute observations. However, he wrote to Doyle, You are yourself Sherlock Holmes. Littlejohn, who was also Police Surgeon and Medical Officer of Health in Edinburgh, One is thought to be Francis Tanky Smith, a policeman and master of disguise who went on to become Leicesters first private detective. Another might be Maximilien Heller, by French author Henry Cauvain and it is not known if Conan Doyle read Maximilien Heller, but in this novel, Henry Cauvain imagined a depressed, anti-social, polymath, cat-loving, and opium-smoking Paris-based detective. Details about Sherlock Holmes life, except for the adventures in the books, are scarce in Conan Doyles original stories, nevertheless, mentions of his early life and extended family paint a loose biographical picture of the detective. An estimate of Holmes age in *His Last Bow* places his year of birth at and his parents are not mentioned in the stories, although Holmes mentions that his ancestors were country squires. In *The Adventure of the Greek Interpreter*, he claims that his grandmother was sister to the French artist Vernet, without clarifying whether this was Claude Joseph, Carle. Mycroft has a civil service position as a kind of human database for all aspects of government policy. He lacks Sherlocks interest in investigation, however, preferring to spend his time at the Diogenes Club. Holmes says that he first developed his methods of deduction as an undergraduate, his earliest cases, the two take lodgings at B Baker Street, London, an apartment at the upper end of the street, up seventeen steps. Holmes worked as a detective for twenty-three years, with physician John Watson assisting him for seventeen and they were roommates before

Watsons marriage and again after his wives death. Their residence is maintained by their landlady, Mrs. Hudson, most of the stories are frame narratives, written from Watsons point of view as summaries of the detectives most interesting cases 3. The novels first appearance in hardcover was in from publisher William Heinemann of London, written between and , it is one of the earliest stories that detail a conflict between mankind and an extraterrestrial race. The novel is the narrative of both an unnamed protagonist in Surrey and of his younger brother in London as southern England is invaded by Martians. The novel is one of the most commented-on works in the science fiction canon, the plot has been related to invasion literature of the time. The novel has been interpreted as a commentary on evolutionary theory, British imperialism. At the time of publication, it was classified as a scientific romance and it has even influenced the work of scientists, notably Robert Goddard, who invented both the liquid fuelled rocket and multistage rocket, which resulted in the Apollo 11 moon landing 71 years later. The narrative opens in an observatory at Ottershaw where explosions are seen on the surface of planet Mars. Later a meteor lands on Horsell Common, near the unnamed narrators home in Woking, the narrator finds them at once vital, intense, inhuman, crippled and monstrous. They briefly emerge, have difficulty in coping with the Earths atmosphere, a human deputation approaches the cylinder with a white flag, but the Martians incinerate them and others nearby with a heat-ray before beginning to assemble their machinery. Military forces arrive that night to surround the common, including Maxim guns, the population of Woking and the surrounding villages are reassured by the presence of the military. A tense day begins, with anticipation of military action by the narrator. On the road during the height of the storm, he has his first terrifying sight of a fast-moving Martian fighting-machine, in panic he crashes the horse cart, barely escaping detection. He discovers the Martians have assembled towering three-legged fighting-machines, each armed with a heat-ray and a chemical weapon and these tripods have wiped out the army units positioned around the cylinder and attacked and destroyed most of Woking. The two try to escape via Byfleet just after dawn, but are separated at the Shepperton to Weybridge Ferry during a Martian afternoon attack on Shepperton and this gives the authorities precious hours to form a defence-line covering London. The brother encounters Mrs. Elphinstone and her younger sister-in-law, just in time to help fend off three men who are trying to rob them. Elphinstones husband is missing, the three continue on together, after a terrifying struggle to cross a streaming mass of refugees on the road at Barnet, they head eastward. Two days later, at Chelmsford, their pony is confiscated for food by the local Committee of Public Supply and they press on to Tillingham and the sea. There they manage to buy passage to the Continent on a paddle steamer 4. Wells

Herbert George H. Wells was an English writer. He was prolific in many genres, including the novel, history, politics, social commentary, Wells is now best remembered for his science fiction novels and is called a father of science fiction, along with Jules Verne and Hugo Gernsback. Wellss earliest specialised training was in biology, and his thinking on ethical matters took place in a specifically and fundamentally Darwinian context and he was also from an early date an outspoken socialist, often sympathising with pacifist views. His later works became increasingly political and didactic, and he wrote science fiction. Called Bertie in the family, he was the fourth and last child of Joseph Wells and his wife, Sarah Neal. An inheritance had allowed the family to acquire a shop in which they sold china and sporting goods, although it failed to prosper, the stock was old and worn out, and the location was poor. Joseph Wells managed to earn an income, but little of it came from the shop. Payment for skilled bowlers and batsmen came from voluntary donations afterwards, a defining incident of young Wellss life was an accident in that left him bedridden with a broken leg. To pass the time he started reading books from the local library and he soon became devoted to the other worlds and lives to which books gave him access, they also stimulated his desire to write. Later that year he entered Thomas Morleys Commercial Academy, a school founded in following the bankruptcy of Morleys earlier school. The teaching was erratic, the curriculum mostly focused, Wells later said, Wells continued at Morleys Academy until In , his father, Joseph Wells, fractured his thigh, the accident effectively put an end to Josephs career as a cricketer, and his subsequent earnings as a shopkeeper were not enough to compensate for the loss of the primary source of family income. No longer able to support financially, the family instead sought to place their sons as apprentices in various occupations. From to , Wells had an apprenticeship as a draper at the Southsea Drapery Emporium. Wellss parents had a turbulent marriage, owing primarily to his mother being a

Protestant, when his mother returned to work as a lady's maid, one of the conditions of work was that she would not be permitted to have living space for her husband and children. Thereafter, she and Joseph lived separate lives, though they never divorced and remained faithful to each other, as a consequence, Herbert's personal troubles increased as he subsequently failed as a draper and also, later, as a chemist's assistant.

5. Standing on the River Thames in the south east of the island of Great Britain and it was founded by the Romans, who named it Londinium. London's ancient core, the City of London, largely retains its 1. London is a global city in the arts, commerce, education, entertainment, fashion, finance, healthcare, media, professional services, research and development, tourism. It is crowned as the world's largest financial centre and has the fifth- or sixth-largest metropolitan area GDP in the world, London is a world cultural capital. It is the world's most-visited city as measured by international arrivals and has the world's largest city airport system measured by passenger traffic, London is the world's leading investment destination, hosting more international retailers and ultra high-net-worth individuals than any other city. London's universities form the largest concentration of education institutes in Europe. In 1908, London became the first city to have hosted the modern Summer Olympic Games three times, London has a diverse range of people and cultures, and more than 300 languages are spoken in the region. Its estimated mid-municipal population was 8.5 million, the largest of any city in the European Union, London's urban area is the second most populous in the EU, after Paris, with 9.5 million inhabitants at the census. The city's metropolitan area is the most populous in the EU with 13.5 million inhabitants, the city-region therefore has a similar land area and population to that of the New York metropolitan area. The London Underground is the oldest underground railway network in the world, the etymology of London is uncertain. It is an ancient name, found in sources from the 2nd century and it is recorded c. 100. The earliest attempted explanation, now disregarded, is attributed to Geoffrey of Monmouth in *Historia Regum Britanniae* and this had it that the name originated from a supposed King Lud, who had allegedly taken over the city and named it Kaerlud. The possibility cannot be ruled out that the Welsh name was borrowed back in from English at a later date, and thus cannot be used as a basis from which to reconstruct the original name. Until 1925, the name London officially applied only to the City of London, two recent discoveries indicate probable very early settlements near the Thames in the London area.

6. It was performed as a Halloween episode of the series on Sunday, October 30, 1938, directed and narrated by actor and future filmmaker Orson Welles, the episode was an adaptation of H. Wells' novel *The War of the Worlds*. It became famous for allegedly causing mass panic, although the reality of the panic is disputed as the program had few listeners. The first two-thirds of the one-hour broadcast was presented as a series of simulated news bulletins, in the days following the adaptation, widespread outrage was expressed in the media. The episode secured Welles' fame as a dramatist, H. Wells' original novel tells the story of a Martian invasion of Earth. The novel was adapted by Howard E. The setting was switched from 19th-century England to contemporary Grovers Mill, the first two-thirds of the hour-long play is a contemporary retelling of events of the novel, presented as news bulletins interrupting another program. A drama aired by Adelaide station 5CL depicted an invasion of Australia via the same techniques, Welles had previously used a newscast format for *Julius Caesar*, with H. Kaltenborn providing historical commentary throughout the story. *The War of the Worlds* broadcast used techniques similar to those of *The March of Time*, Welles was a member of the program's regular cast, having first performed on *The March of Time* in March. *The Mercury Theatre on the Air* and *The March of Time* shared many cast members, Welles discussed his fake newscast idea with producer John Houseman and assistant director Paul Stewart, together, they decided to adapt a work of science fiction. They considered adapting M. Howard Koch had written the first drafts for the Mercury Theatre broadcasts *Hell on Ice*, Seventeen, Monday, October 24, he was assigned to rescript *The War of the Worlds* for broadcast the following Sunday night. Tuesday night, 36 hours before rehearsals were to begin, Koch telephoned Houseman in what the producer characterized as deep distress, with only his own abandoned script for *Lorna Doone* to fall back on, Houseman told Koch to continue adapting the Wells fantasy. He joined Koch and Froelick and they worked on the script throughout the night, on Wednesday night, the first draft was finished on schedule. On Thursday, associate producer Paul Stewart held a cast reading of the script, with Koch and that afternoon, Stewart made an acetate recording, with no music or sound effects.

Chapter 3 : His Last Bow.- The War Service of Sherlock Holmes - Wikisource, the free online library

Sherlock Holmes's War of the Worlds (currently retitled as of as The Further Adventures of Sherlock Holmes: The War of the Worlds) is a sequel to H. G. Wells' science fiction novel The War of the Worlds, written by Manly Wade Wellman and his son Wade Wellman, and published in

The sun had long set, but one blood-red gash like an open wound lay low in the distant west. Above, the stars were shining brightly, and below, the lights of the shipping glimmered in the bay. The two famous Germans stood beside the stone parapet of the garden walk, with the long, low, heavily gabled house behind them, and they looked down upon the broad sweep of the beach at the foot of the great chalk cliff on which Von Bork, like some wandering eagle, had perched himself four years before. They stood with their heads close together, talking in low, confidential tones. From below the two glowing ends of their cigars might have been the smouldering eyes of some malignant fiend looking down in the darkness. A remarkable man this Von Bork—a man who could hardly be matched among all the devoted agents of the Kaiser. It was his talents which had first recommended him for the English mission, the most important mission of all, but since he had taken it over those talents had become more and more manifest to the half-dozen people in the world who were really in touch with the truth. One of these was his present companion, Baron Von Herling, the chief secretary of the legation, whose huge horse-power Benz car was blocking the country lane as it waited to waft its owner back to London. I happen to know what is thought in the highest quarters of your work in this country. It is that surface simplicity of theirs which makes a trap for the stranger. Then one comes suddenly upon something very hard, and you know that you have reached the limit and must adapt yourself to the fact. They have, for example, their insular conventions which simply must be observed. As an example I may quote one of my own worst blunders—I can afford to talk of my blunders, for you know my work well enough to be aware of my successes. It was on my first arrival. I was invited to a week-end gathering at the country house of a cabinet minister. The conversation was amazingly indiscreet. Well, I naturally sent a resume of the information to Berlin. Unfortunately our good chancellor is a little heavy-handed in these matters, and he transmitted a remark which showed that he was aware of what had been said. This, of course, took the trail straight up to me. There was nothing soft about our British hosts on that occasion, I can assure you. I was two years living it down. A pose is an artificial thing. This is quite natural. I am a born sportsman. You yacht against them, you hunt with them, you play polo, you match them in every game, your four-in-hand takes the prize at Olympia. I have even heard that you go the length of boxing with the young officers. What is the result? Nobody takes you seriously. And all the time this quiet country house of yours is the centre of half the mischief in England, and the sporting squire the most astute secret-service man in Europe. Genius, my dear Von Bork—genius! But certainly I may claim that my four years in this country have not been unproductive. Would you mind stepping in for a moment? Von Bork pushed it back, and, leading the way, he clicked the switch of the electric light. He then closed the door behind the bulky form which followed him and carefully adjusted the heavy curtain over the latticed window. Only when all these precautions had been taken and tested did he turn his sunburned aquiline face to his guest. I must, of course, claim the protection of the embassy for the others. There will be no difficulties for you or your baggage. Of course, it is just possible that we may not have to go. England may leave France to her fate. We are sure that there is no binding treaty between them. There is a definite treaty there. She could never recover from such a humiliation. Honour is a mediaeval conception. Besides England is not ready. It is an inconceivable thing, but even our special war tax of fifty million, which one would think made our purpose as clear as if we had advertised it on the front page of the Times, has not roused these people from their slumbers. Here and there one hears a question. It is my business to find an answer. Here and there also there is an irritation. It is my business to soothe it. But I can assure you that so far as the essentials go—the storage of munitions, the preparation for submarine attack, the arrangements for making high explosives—nothing is prepared. I fancy that in the future we have our own very definite plans about England, and that your information will be very vital to us. It is to-day or to-morrow with Mr. If he prefers to-day we are perfectly ready. If it is to-morrow we shall be more ready still. I should

think they would be wiser to fight with allies than without them, but that is their own affair. This week is their week of destiny. But you were speaking of your papers. The large oak-panelled, book-lined room had a curtain hung in the further corner. When this was drawn it disclosed a large, brass-bound safe. Von Bork detached a small key from his watch chain, and after some considerable manipulation of the lock he swung open the heavy door. The light shone vividly into the opened safe, and the secretary of the embassy gazed with an absorbed interest at the rows of stuffed pigeon-holes with which it was furnished. Each pigeonhole had its label, and his eyes as he glanced along them read a long series of such titles as "Fords," "Harbour defences," "Aeroplanes," "Ireland," "Egypt," "Portsmouth forts," "The Channel," "Rosythe," and a score of others. Each compartment was bristling with papers and plans. Putting down his cigar he softly clapped his fat hands. Not such a bad show for the hard-drinking, hard-riding country squire. But the gem of my collection is coming and there is the setting all ready for it. The Admiralty in some way got the alarm and every code has been changed. It was a blow, Baronâ€”the worst setback in my whole campaign. But thanks to my check-book and the good Altamont all will be well to-night. You can imagine that things are moving at present in Carlton Terrace and that we have all to be at our posts. I had hoped to be able to bring news of your great coup. Did Altamont name no hour? Will come without fail to-night and bring new sparking plugs. In our code everything likely to come up is named after some spare part. If he talks of a radiator it is a battleship, of an oil pump a cruiser, and so on. Sparking plugs are naval signals. Of course he has a salary as well. They are useful, these traitors, but I grudge them their blood money. He is a wonderful worker. If I pay him well, at least he delivers the goods, to use his own phrase. Besides he is not a traitor. I assure you that our most pan-Germanic Junker is a sucking dove in his feelings towards England as compared with a real bitter Irish-American. Sometimes I assure you I can hardly understand him. Must you really go? He may be here any moment. But it looks like revelry. He is a touchy fellow and needs humouring in small things. I have to study him, I assure you. There may be other lights within the week, and the English coast a less tranquil place! The heavens, too, may not be quite so peaceful if all that the good Zeppelin promises us comes true. By the way, who is that? She was bending over her knitting and stopping occasionally to stroke a large black cat upon a stool beside her. Well, au revoir, Von Bork! The secretary lay back in the cushions of the luxurious limousine, with his thoughts so full of the impending European tragedy that he hardly observed that as his car swung round the village street it nearly passed over a little Ford coming in the opposite direction. Von Bork walked slowly back to the study when the last gleams of the motor lamps had faded into the distance. As he passed he observed that his old housekeeper had put out her lamp and retired. It was a new experience to him, the silence and darkness of his widespread house, for his family and household had been a large one. It was a relief to him, however, to think that they were all in safety and that, but for that one old woman who had lingered in the kitchen, he had the whole place to himself. There was a good deal of tidying up to do inside his study and he set himself to do it until his keen, handsome face was flushed with the heat of the burning papers.
