An operating system is basically just a library/application like any other application. An OS is not necessary to control computer hardware but it makes life sooooooo much easier for developers.

As recommended by many sources, I created separate user accounts for my wife and myself, and I have not needed to log in as admin for a while. Now I have simply forgotten the password. The obvious thing I have not done is pay for some commercial cracking software, but I have no idea which if any are reputable and effective. Please suggest a solution, as I would like to upgrade to Windows Stephen Did you set up the original administrator account using a Microsoft email address as your MSA Microsoft Account , which is what I strongly recommend? If so, your logon password is the same as your email password, and this is something you might still remember. You might even have written it down somewhere. If you did use a Hotmail, Live or Outlook. There are step-by-step instructions at About. Your PC has to be online so that Microsoft can update the admin password on your laptop. However, if you are resetting the password from your standard account, then you will obviously be online. This should be possible on all Windows 8 PCs that still have their recovery partition intact. It also works with Windows 10 PCs. Other methods of resetting a Windows admin password ultimately boil down to changing files on the hard drive before the admin account gets control. Many PCs have retained the concept, so that pressing,say, the F11 key or Esc during the Windows 8 boot sequence will take you to the ASO screen, where you can start a command prompt window cmd. Check the user guide for your HP laptop on your hard drive or online to see which function key to press. Otherwise, you can get to the ASO screen by holding down the shift key while clicking on the power icon and selecting Restart. This should return it to factory condition. Ideally, use the recovery DVD that Windows suggested you create in case you ran into a major problem. Of course, if you have one of those, you can just reinstall Windows 8 from scratch. There are half a dozen available, including sethc. You rename one of these to stop it working: After that, you rename the Command shell from cmd. Now, when you start Windows 8, you can run the on-screen keyboard from the utilities icon, but the command shell will load instead. This lets you assign a new password eg to your admin account, so that you can log in. Remember to clean up by renaming osk. If you want to try a paid-for cracker, Windows Password Key looks a reasonable bet. Prevention There are ways to avoid getting into this situation in the first place. I also have two admin accounts, in case one of them goes bad. Finally, I note that Microsoft allows you to create a password reset disk or USB thumb drive or floppy disk so that you can reset your password if you forget it. Plot[edit] At night just outside Paris, a woman drives along a riverbank and dumps a corpse in the river. After the body is recovered, Dr. The body belonged to a young woman who died following Dr. Christiane secretly watches her father and Louise carry Edna to the lab, and then goes to tenderly caress the dogs her father keeps caged, who eagerly accept her love, and are unaffected by her appearance. Edna escapes, but falls to her death from an upstairs window. Her face grows worse within days; the new tissue is being rejected and she must resort to wearing her mask again. Christiane again phones Jacques and this time says his name, but the phone call is interrupted by Louise. Jacques reports the call to the police, who have been investigating the disappearance of several young women with blue eyes and similar facial characteristics. The police have gained a lead concerning a woman who wears a pearl choker, whom Jacques recognizes as Louise. After being declared healthy, Paulette leaves for Paris and is promptly picked up by Louise, who delivers her to Dr. She also frees the dogs and doves that her father uses for experiments. For most of the film, her face is covered by a stiff mask that resembles her face before the accident. After receiving a phone call from Christiane, he helps the police in investigating the crime. Edna is the first woman whose face is successfully transplanted to Christiane. Parot ultimately discovers that all of the missing girls have similar features. Production[edit] In the late s, British horror films such as The Curse of Frankenstein and Horror of Dracula were popular with French filmgoers. At the time, similar modern horror films had not been attempted by French film makers until producer Jules Borkon decided to tap into the horror market. All three of these were part of the novel, presenting a challenge to find the right tone for presenting these story elements in the film. Faustus along with The Manster in The distributors play on the artistic nature of the film in this poster that modern critics would later praise. Unhappily there is practically nothing in this inept work to offer any encouragement for doing so. Jonathan Rosenbaum of the Chicago Reader praised the film, referring to it as "absurd and as beautiful as a fairy tale". Hoberman of The Village Voice declared the film "a masterpiece of poetic horror and tactful, tactile brutality".

Heather, British Species Advantages: It enables files to be read and accessed quickly and is also readily expandable. By the same token, common names do not occur evenly throughout the alphabet. There are, for instance, more names beginning with S than with Q. As an alpha file grows - say to hundreds or thousands of names - identification and locations become more cumbersome. Items within a named file require some additional system of classification - letters to an account client may need to be numbered or filed chronologically, making cross-referencing laborious. Numerical Filing Numerical filing refers to all systems in which documents are prenumbered to distinguish them from each other or from alpha documents. Numerical systems can be as simple as numbering and filing from the lowest number to the highest. Files may be numbered from 1 to and major sections may occur at regular intervals , , Sub -sections within a file may be introduced by the addition of a decimal point: The greatest benefit of a numeric system is speed of filing and finding. It is twice as fast to file and find by number than by name. Numeric systems provide both a positive identification of the record and a degree of confidentiality. This system is capable of infinite expansions and can cope with a very large number of sub-sections, sub-divisions and diverging branches of data. In order for the numbers to convey readily what they mean, it is necessary for an index to be created, eg: Geographic Geographic filing systems operate generally by county or country and then alphabetically or numerically by account name or number. Reasons for this type of filing can be several. Since countries have differing laws and licenses, a commercial enterprise may have to consider these constraints as of primary importance. Subject Filing This is the arranging of material by given subject. It is filing by descriptive feature instead of by name or number. Such filing involves choosing a word or phrase to stand for each subject or to point out one phase of it. A subject folder may contain any combination of correspondence, bulletins, clippings, pictures, statistics, trade journals and other printed information relating to the subject. Subject filing is considered the most difficult of all methods of filing. It is a system which demands that the person installing such a system has a complete knowledge of the business. The greatest problem is knowing under which subject an item will be filed. Because a subject file is expensive to maintain, subject filing should be used only where necessary. Chronologic Filing Chronologic filing is filing by date. Particularly useful when actions need to be taken on a cyclical basis - like relicensing cars annually, good for cross-referencing - file on vehicle and relicensing date records can be quickly matched. This systems requires an index and explanatory back-up system. It is time-consuming to access data held in a manual filing system. Tightly packed files slow filing and finding to a crawl. Index Guide All active files should have a guide every 10 to 15 folders. Anything less means you are wasting time pushing and pulling folders back and forth, looking for the required record. Folder Tabs Folder tabs should be visible immediately upon opening the file. A well-run file must have folders of uniform size and tab styles. Mixing folder heights and tab positions can reduce the efficiency of a filing system. Folder Tab Identification Identification on the tabs should be typewritten. Handwritten labels or labels with the names crossed out and re-typed should never be permitted. If more files are placed in a folder than it can hold, the tab will slump down and out of sight. Noting Files In Use A file borrowed without a record of who has it, when it was removed from the filing system etc, is a file lost! Maintaining Security Some files will certainly contain highly confidential data; make sure you control who may access what and keep a secure system for sensitive files.
