Chapter 1 : Business Intelligence Platform | TD ADAPT

BI, Business Intelligence Système interprétant des données complexes permettant aux dirigeants d'entreprise de prendre des décisions en connaissance de cause. Les données sont analysées selon plusieurs dimensions (type de produits, régions et saisons par exemple).

Ironically, because it promoted a different way of thinking. As a few speakers even suggested, artificial intelligence actually makes business more human. He described how these technologies are fundamentally changing business processes. Far from being fearful, though, Chapados comes with a message of hope, one echoed by Rizwan Khalfan, chief digital officer of TD Bank. The trend of AI creating more human benefit starts with backend processes. Chapados gave the example of the trucking industry, a long-standing example of the massive displacement potential from AI. Instead of being fearful of lost jobs, Chapados encouraged the audience to not only look for gaps in the technology that can be filled by humans, but to rejoice in how AI technology can remove mundane or monotonous tasks from your plate. This is where humans come in. This not only offers more comfort and stability for the drivers, but can also nearly double asset truck utilization, says Chapados. Hickey talked about AI improving data security. The panel discussed how deep learning, at its core, is a repeatable model that will make humans more effective at their jobs as machines bring up insights and data in a couple of hours that humans could not process in a lifetime. Overwhelmingly, the panel talked about the need to frame AI as a business solutions provider. I pressed Khalfan for his thoughts on this, and his response was opportunity-focused. However, the reality is that there are so many other opportunities that become available because of AI. Give them opportunities to try new things â€" a sentiment brought up by Ambati, and echoed by Khalfan later in our conversation. Khalfan brought up the AI Day itself as one example; it was planned by junior people at the bank who wanted to learn more about the impact of AI in their world. AI in the community As companies grow, delivering on AI promises of great customer experiences at scale is a challenge. Luckily, two smart minds are on the case: Hickey, during his keynote, talked about how Watson technology first came onto the scene when it famously beat Jeopardy champion Ken Jennings in In some trials, says Hickey, Watson even proved more accurate than doctors when it comes to diagnoses. Hickey remained adamant that Watson â€" and AI in general â€" should empower people to do their jobs better, not replace people with technology. The partnership with Salesforce is no different. Hickey showed a video clip of Salesforce CEO Marc Benioff announcing the partnership, and his excitement was not for how much more sales Watson and Einstein will bring the company. Benioff was excited because this partnership meant Salesforce could better serve customers whenever they need help. Benioff was particularly excited aboutâ€¦ the weather. Salesforce is used by many insurance companies. Insurance companies are happy because they pay out less. Customers enjoy undamaged cars and have the added benefit of feeling cared for by their insurance companies. Einstein and Watson keep on plugging, none the wiser to the human impact they are making. The robots are coming As the talks drew to a close, the panel turned to a much-talked about but often-misunderstood topic: Data cannot be in a silo.

Chapter 2 : Business Intelligence Tool and Reporting | TD Adapt

This is why we have developed a new business intelligence tool that enables digital marketers to quickly access the information they need to make smarter business decisions. Welcome to ADAPT, our market-leading business intelligence platform.

Chapter 3 : Td Bank Us Jobs | CareerArc
