*ATI TEAS 6 Study Guide: TEAS Review Manual and Practice Test Prep Questions for the ATI TEAS Version 6 (Sixth Edition) Aug 30, by ATI TEAS 6 Exam Prep Team and Trivium Test Prep.*

As I stated, I got them as part of a bundle. Let me tell you, they are worth their weight in gold. These tests are invaluable in helping you understand what to expect on the actual exam, in both form and content. I found neither form A or B superior to the other, yet both are an excellent litmus test for the real deal. Additionally, the online practice exams will also give you an idea of the timing of the test. Many people run out of time on the actual exam. Let these online tests assess how you are doing in that area. After all, blank answers are scored as wrong answers. Learn what you need to do faster, then practice, practice, practice. I found the results very helpful because a breakdown of areas I needed to concentrate on was included. I simply focused my studies on those subjects. When I retook them, I scored higher. I found the online practice exams to be more difficult than the study manual questions. Surprisingly, in opposition to what I have read on this site, I found the questions on the actual exam to be more difficult than the practice exams. However, as has been stated by many, I scored significantly higher on the actual exam. The point of all of this: There is not a better way to get a feel for the actual exam. By the time you take each of them twice, you will be well versed in the form of the exam; and you will have a better idea of how you need to rationalize your way through each type of question. Expect the stories on the actual exam to be longer than either the online practice exam or the manual. However, content is very similar, as are questions. This section was the most similar to both the online practice exams and the manual. You just need to practice. As many have stated, this section is the most random. All of the topics you need to study ARE covered in the manual. Make sure you know them cold. I would further suggest becoming familiar with each subject on a deeper level. But, the manual does not necessarily cover every fundamental on each subject. More on this later. I found this section to be very similar to both the online tests and the study manual. If you are comfortable in both, you will do well on this section in the actual exam. As far as the manual goes, read everything. It reads much like directions to programming a VCR, but force your way through it if necessary. I often found some of the most useful information in the middle of a lengthy, seemingly unimportant paragraph. But, I can honestly say that it is worth the time.

Reading - The First Section Know which primary sources make sense for a given type of story. Be able to distinguish fact from opinion. Make sure you can discern the difference between the styles of stories given an example. Follow a set of directions to get to a specific end point. Read these very carefully. Identify information based on a label, recipe, or set of directions. Decipher the meaning of a word based on its context in the sentence. Mine were not as easy as the examples, so really think about this style of question. Finding information is a table of contents, ad, index. Gleaning information out of a telephone book. Word problems with whole number, fractions, and decimals. Know how to figure perimeter. If there is a formula to be computed, they will give it to you. The two exceptions to this rule and the two formulas you will need to memorize are for the following: You WILL have a question regarding each of these on your exam. Be able to list four numbers in the order requested. These numbers may include whole numbers, fractions, and decimals in any combination. Be VERY careful to order them as requested. Calculate the cost of an even given specific values times a number of guests. Estimation to the nearest given value. Understand if you are supposed to estimate to tens, hundreds. Know how to change a roman numeral into a number and how to change a number into a roman numeral. You will have a question like this on your exam. Conversion problems miles to km. The formula will be given. Do not bother memorizing these. Just construct a sentence stating, "Subject A depends on Subject B to be relevant. Familiarize yourself with interpreting information based on charts. Be very, very, very familiar with absolute value and how to solve equations that include absolute value. Understand what happens during serial dilution and what values result from it. These are very easy. Know the general concepts of natural selection and adaptation. Make sure you are able to distinguish between the two given an example. Be able to decipher if the population will increase or decrease given an example. Know your biological classifications from general to specific: Watch these questions, paying attention to whether they are asking for

more specific or more general in the order. Know what is happening in all of different stages of translation and transcription. Know where it happens. Know the parts of a cell in both eukaryotes and prokaryotes, and what those parts do. Know if they produce anything or if they are involved in an immune response. Understand the makeup of the cell wall in both plant and animal cells. Always, always, always equate protein with amino acids the building block of proteins. Understand what chloroplasts do and how they do it. Chromosomes, genes, and alleles. I found videos useful in this. Be sure you understand what a heterotroph and autotroph is and how they relate to each other in the life cycle. Review photosynthesis - review it again - then review it again. Be very familiar with cellular respiration, why it happens and what is happening. Be able to read a codon chart and decipher the outcome from a given example. This question was more difficult than the basic charts I studied. Punnett squares and calculating probability given an example. Make sure you can recognize an example of each. I suggest googling several examples so you can solidify the difference in your mind. My question was more difficult than the basic, but easy to understand because I had the concept down pat. The dreaded earth science question - is there one? And as covered in the manual, mine was about the sun. It was a concept not covered in the manual, but was easy nonetheless. There were no other earth science questions on my test. No rocks, clouds, water cycle. Understand the purpose of a catalyst. Know everything there is to know about the periodic table and the information you can get from it. Know how the numbers relate to each other and how to decipher how many of each is in an element if given a specific number. Lastly, make sure you understand electron configuration. Be very familiar with valence electrons and why they are important. Enzymes and vitamins - what do they do, where do they come from, why are they important. Know what a given pH means acidic or basic? Know the path of blood through the heart, including valves and whether the blood is oxygenated. Know the make up of the lungs and where oxygen exchange occurs. Know the sections of the brain and what each is responsible for. Tissue types, where you would find them, and what they do. Know several examples of each type of tissue. Know about the digestive enzymes. Know where the bulk of nutrients are absorbed. Know which division of the nervous system controls it. Know the functions of the liver, spleen and pancreas. Know which systems they belong to and they may belong to more than one. Be very familiar with the nervous system and its divisions. Know what each controls and the branches that make them up. Know how the thyroid and parathyroid work together and what they do separately.

We have not put the guarantee to the test but have to believe that it is real given that Kaplan is willing to put it in writing. Because Kaplan helps students across a number of different standardized tests, it has access to some of the best tips on how to ace standardized tests. The science and reading sections could use some improvements and we fully expect to see them as newer editions come out. The guarantee assuming it is real takes some of the risk out of giving this TEAS study guide a try. Drawn from the Kaplan lineage of quality study materials. Flashcards are useful in any type of test preparation because they help test your knowledge in a rapid fire style that many ATI review books cannot do. This set of ATI TEAS flashcards pack lots of information and leverages a flashcard format to deliver bits of knowledge in rapid succession. Because of this, TEAS test results are being required for admission by an increasing number of nursing schools Our goal is to help people planning on taking the TEAS exam get familiar with how it works and the TEAS study guides and resources out there. The TEAS exam is minutes long and the topic areas have been written such that they are relevant to someone with a high school education or equivalent. TEAS test content changes included a shift in focus from earth sciences to anatomy and physiology as well as more emphasis on knowledge integration instead of comprehension in the TEAS reading section. English and Language Usage Communication ability is an underrated yet exceedingly important part of being a nurse. Can you get a useful history from different types of patients? Can you convey important medical information to the doctor? Can you talk with a family member about their loved one? Can you write notes in a way that other people can understand and use? Reading While not always utilized in direct patient care, effective reading and comprehension skills are critical for functioning as a nurse. Lots of communication in all medical settings is done through electronic and paper charts, notes and other forms of correspondence between team members and people from other facilities. Science As one would suspect, science is a core requirement in nursing. Mathematics A good foundation in math is an important part of being an effective nurse. From tracing vital signs to dosing medications and IVs for therapy, math is constantly required in the daily life of a nurse. Also, math is sometimes required when communicating with other team members as well as family members. The updated version of the TEAS test is score on an adjusted percent correct scores basis similar to the old version. But what is considered a good score on the TEAS exam? The TEAS cut score is an indicator that represents the scoring level that an applicant must achieve on the TEAS exam in order to be considered for the program. The TEAS cut score varies from program to program. There is only so much worrying one should do when it comes to TEAS scoring. All you can do is focus on choosing the top TEAS study guides for you, establishing a TEAS exam study schedule that will help you cover the required material and prepare yourself mentally, and take the TEAS exam on the scheduled day. Any more concern than that about your TEAS exam scores ahead of time will only serve to stress you out before you take the TEAS exam and impact your performance. Both exams are used as part of the admission criteria for nursing school. While the HESI seems to have a longer history in its role as an admission exam, the TEAS exam is growing in relevance – particularly for nursing schools. Also, the TEAS exam is reportedly slightly harder. We hope that you found this review of the different TEAS practice tests and study guides out there to be useful and wish you the best of luck on your TEAS exam and in your career.
