Chapter 1 : International Agro-food Chains and Networks as Instruments for Development

Source In: Agro-food supply chains and networks for development: Proceedings of the Frontis Workshop on Agro-food Chains and Networks for Development, Wageningen, The Netherlands, September

In developing countries companies become integrated into geographically dispersed supply networks that link producers, traders and processors from the South with retailers and consumers in urban centres and in the North. Globalization of trade and integration of supply chains lead to new demands regarding food quality, safety and health. Companies involved in global food and agri-business chains and networks face fast changes in their market and business environment. New procedures and practices for organizing food supply networks - based on co-innovation between primary producers, processors and retailers - are emerging to cope with food grades and standards. Optimizing chain performance asks for cooperation between all agents involved in the supply chain. Public and voluntary agencies may provide important contributions for reinforcing the supply-chain environment. This volume combines insights from theory with a large number of business cases to enable a better understanding of the opportunities and constraints that supply-chain integration can offer for stimulating rural development. Agro-food chains and networks for development: Agricultural development and trade liberalization. Participation of smallholders in international trade. Chains and networks for development: Vegetables sourcing in Africa: Building partnerships for adding value: The contribution of Fair trade towards market access by smallholder banana producers. The rapid rise of supermarkets and the use of private standards in their food product procurement systems in developing countries. Agro-food chains and sustainable livelihood: Supply-chain development for fresh fruits and vegetables in Thailand. Organic cacao chain for development: Developing a sustainable medicinal-plant chain in India: Exclusion of small-scale farmers from coordinated supply chains: Food chains and networks for development:
