Exaggerated estimation of self and own abilities Image Credit: Psychopaths naturally tend to gravitate toward certain careers more than others. Conversely, the least amount of psychopaths are care aides, nurses, therapists, craftspeople, and beauticians. While lawyers and salespeople being on the list might not surprise anyone, the rate of psychopathic CEOs might. In one study done with incarcerated men, there was a strong correlation between those that were diagnosed as problem gamblers and those that had a psychopathic personality disorder. In another, scans revealed that a particular region in the brain is dysfunctional in psychopaths the same way as it is in problem gamblers. A psychological test called the Iowa gambling task backs up these findings. After draws, most mentally healthy participants figure out that certain decks help them while others hurt them, while those with psychopathic brain traits never develop awareness or avoidance of the harmful decks. Another study of a small sample of prisoners found that higher levels of psychopathy and antisocial traits meant better decision making during the same four-deck card game, compared to the normal population. Entry, Assessment, Manipulation, Confrontation, and Ascension. Entry is simply the psychopath using their highly-polished social skills to get hired, or gain entry into the company. Next comes confrontation, when the psychopath casts aside these pawns by framing them or otherwise harming their reputation through lies. This sets the stage for ascension, where the psychopath betrays and then takes the place of those they once cozied up to. Same goes for the grandiose self-confidence that makes psychopaths stand out over other candidates for a promotion. But no matter how much someone seems like a perfect employee at first, these traits whether obvious or not often spell ruin for an organization. For companies as a whole, higher turnover, absenteeism, and loss of shareholder investments are also frequently associated with having a psychopath in charge. Examples of Successful Corporate Psychopaths Psychopaths in the corporate world are more than just hearsay or your friend joking that they think their boss is one. During his actual time as CEO, Skilling was reported to have bullied and manipulated both employees and investors while also frequently hatching plans to increase profits with no mindfulness of the law. Another high-profile example was that of British media mogul Robert Maxwell. Owner of many publishing ventures including The Daily Mail, Member of Parliament, and war hero, Maxwell built his empire by being simultaneously charming, delusional, and litigious against any and all opponents. Proverbially and sometimes literally, he had no problem pissing on anyone he saw to be beneath him. After his mysterious death in, tapes were discovered that the paranoid Maxwell was also regularly recording the conversations of his employees.
