

Chapter 1 : List of countries by total health expenditure per capita - Wikipedia

*The Health of the Country* relies much on the connection that the displaced Native populations felt to their land, but Valenciens' work asserts that much the same could be said of white settlers as well.

Learn more about Panama and other countries in our daily postcard e-letter. Your email address International Living Magazine If money were no object, what would your dream retirement look like? Each month, we delve into the details you need to take action. We share our contacts. We lay out the pluses and minuses. And we keep you up-to-date on the latest developments in the best overseas havens. Clinics and hospitals are strategically located in hubs across the country. The compact, cosmopolitan capital is home to many facilities, with four major private hospitals considered to be among the best in the region. Known as the most technologically advanced medical center in Latin America, Hospital Punta Pacifica is just one of many facilities in Panama with U. In addition to the hospital in Panama City, founded in , the renowned San Fernando group now has a small but well-equipped satellite facility in the beach hub of Coronado, 51 miles west of the capital. The same is true for dentistry in Panama—one of many fields attracting medical tourists to Panama. Pharmacies in Panama are, of course, also plentiful, with the Arrocha and Metro chains among the most ubiquitous. The El Rey chain offers hour-service in many of its supermarkets, meaning you can talk to a pharmacist any time of the day. Prices for prescription drugs are low as well, because manufacturers price them for the market. Plus, some drugs that require a prescription elsewhere are available over the counter in Panama. Finally, private health insurance is available to expats living in Panama and is generally much less expensive than insurance in the U. This helps keep the cost of everything from consultations to medication in check. Since we were both too young for Medicaid, we wanted to live somewhere with good healthcare that cost less than the U. Panama topped all the lists. It offers world-class care and English-speaking doctors at a fraction of the cost. And these doctors will even give out their personal cell phone numbers for after-hours questions! Panama City has top-notch hospitals, and the best one Punta Pacifica is the only hospital in Central America associated with Johns Hopkins International. Since my husband had cornea transplants, our first priority was to find a cornea specialist. Clyde feels his doctor in Panama is equal in skill to the U. Punta Pacifica is about an hour from our new home near the beach in Chame two hours if the traffic is heavy. The plan we chose will only cover us in Panama, but does have some emergency coverage when traveling. Driving the hour into Panama City makes sense for specialist treatment, but for everything else, our local doctor is just a few minutes away. A recent visit to Dr. We could never imagine back in the U.

*Community Health Center of the North Country (CHCNC) has sites located in St. Lawrence, Franklin and Jefferson Counties. Our health centers provide affordable, high quality healthcare to people of any age, race, gender, sexual orientation, religion, marital status, and national origin, regardless of insurance or financial status.*

Hospitals in Antalya Turkey has a very complex health care system because of the existence of different plans and departments involved in this sector. All health care and related social welfare activities are coordinated by the Ministry of Health. Article 60 of the Turkish Constitution quotes: "The State takes the necessary measures to create this confidence and organizes the organization". Therefore, the Ministry is responsible to provide health care for the people and organize preventive health services, build and operate state hospitals, supervise private hospitals, train medical personnel, regulate the price of medical drugs nationwide, control drug production and all pharmacies. Today, health care in Turkey is better compared to the past but still not reached at the expected quality, especially in most of the State hospitals in smaller cities. Private hospitals lately do a better job raising their quality of their physicians and medical equipment investing more money on this sector. Most of the hospitals and doctors are concentrated in the cities and big towns where there is more people and more profit, meanwhile there is little health service in the countryside and rural areas unfortunately. Besides state and private sector, also universities and Ministry of Defense establish and operate hospitals in the country. University hospitals instead have two major source of funds; allocations from State budget through Higher Education Board YOK and self generated funds. Employers pay insurance premiums to cover work-related injuries, professional job diseases, or maternity leave. Both employers and employees contribute specified proportions to cover premiums for illness, disability, retirement, and death benefits. A new law provides health care also to unemployed people if they match certain criteria. The law entitles all persons who are employed by a contract of service to benefit from social insurance and health care. Agricultural workers, Self-employed, and Persons contributing to one of the pension funds established by law are excluded from the coverage of the SGK. Ministry of Health can do special contracts with University and Private hospitals in order for their members to use such hospitals besides the SGK hospitals. SGK members are insured for work injuries and professional job diseases, medical care, illness, disability, and maternity. These would be craftsmen, artisans and small businessmen, technical and professional people who are registered to a chamber or professional association, shareholders of companies other than co-operatives and joint stock companies, and self-employed in agriculture. Members of Bag-Kur can choose the step at which they make their contributions between scales of 1 to 24, being 1 the lowest premium payment level with certain medical care limits. They are covered for all outpatient and inpatient diagnosis and treatment. Bag-Kur does not operate its own health facilities, but contracts with other public providers, including the SSK hospitals. Therefore the patient pays for the medical expenses and then get reimbursed by Bag-Kur. Bag-Kur coverage is now known as 4-B plan. Emekli Sandigi This is a Government Employees Retirement Fund for retired civil servants, it also includes health insurance. Besides retirements pension after completing a specific period of state service, the Fund offers other benefits such as a retirement bonus and a death grant payable to the survivors of a pensioner, and many other privileges. Emekli Sandigi coverage is now known as 4-C plan. Poor people earning less than a minimum level of income which is defined by the law, are provided a special card giving free access to outpatient and inpatient care at the state and some university hospitals, and covering their inpatient medical drug expenses but excluding the cost of outpatient drugs. The expenditure for the almost 11 million Green Card holders has exceeded Government allocations thus causing big gaps in the budget. Only the Ministry of Health is authorized to issue Green Cards. Other Health Services Private health insurance is well developed in Turkey. Also private pension funds known as BES have been started some years ago and growing very fast. These private funds are usually private banks or big insurance companies that offer this service. Depending on the pension plan you choose, after 10 - 15 - 20 years you can get an accumulated bonus when you retire from these private funds or get your monthly pension until death. There are many pharmacies all over Turkey Eczane in Turkish which are concentrated especially near hospitals but also in every neighborhood. Certain

drugs are sold with green or red prescriptions permitting the Ministry to control sale of some medicines, and there are also many sold over the counter OTC without the need of a prescription. The Red Crescent Kizilay , equivalent of the Red Cross, is a humanitarian aid organization and covers the widest range of welfare services in Turkey , especially in times of war or natural disaster such as earthquakes. **Chapter 3 : Economic Growth: What are the Best Measurements? | Investopedia**

*In a book published last year, [The Rise and Fall of Nations: Forces of Change in the Post-Crisis World](#), Ruchir Sharma - head of emerging markets for global bank and funds manager Morgan Stanley's asset management business - talks about a number of indicators to assess the health of an economy.*

See below for more information on our travel notice categories. For a list of all Zika virus travel notices by region, visit [Zika travel information](#). Warning Level 3, Avoid Nonessential Travel Because of the typhoon that crossed the Northern Mariana Islands on October 25, travelers to the area may experience serious health and safety risks, and medical care may not be available. CDC recommends that travelers avoid all nonessential travel to the province of Central Sulawesi, Indonesia. The country is experiencing outbreaks of infectious diseases, and adequate health care is currently not available in most of the country. CDC recommends that all travelers to Somalia be vaccinated fully against polio. CDC recommends that all travelers to Syria be vaccinated fully against polio. CDC recommends that all travelers to Nigeria be vaccinated fully against polio. Because of the risk of cross-border transmission, CDC recommends a one-time booster dose of polio vaccine for fully vaccinated adults traveling to Niger, Cameroon, or Chad to work in healthcare facilities, refugee camps, or other humanitarian aid settings. Travelers to Japan should make sure they are vaccinated against rubella with the MMR measles, mumps, and rubella vaccine before travel. Travelers to Nigeria should protect themselves from monkeypox by washing hands often with soap and water, and avoiding contact with animals or people that may be sick. Public health officials have reported that mosquitoes are infected with Zika and spreading it to people. Travelers to South Asia, including Pakistan, should take precautions to protect themselves from typhoid fever, including getting a typhoid fever vaccination. Travelers to these areas should also take extra care to follow safe food and water guidelines. Travelers to Brazil should protect themselves from yellow fever by getting yellow fever vaccine at least 10 days before travel, and preventing mosquito bites. Travelers to Senegal should protect themselves by preventing mosquito bites. Travelers at highest risk are those exposed to contaminated fresh water like lakes and rivers in the affected area, such as through swimming, wading, kayaking, or rafting. CDC recommends that travelers to Brazil protect themselves by making sure they are vaccinated against measles. Travelers to Kenya should protect themselves from RVF by avoiding contact with infected animals and preventing mosquito bites. CDC recommends that travelers to Italy protect themselves by making sure they are vaccinated against measles. CDC recommends that travelers to Romania protect themselves by making sure they are vaccinated against measles. CDC recommends that travelers to Greece protect themselves by making sure they are vaccinated against measles with the MMR measles, mumps and rubella vaccine. CDC recommends that travelers to Indonesia protect themselves by making sure they are vaccinated against measles. CDC recommends that travelers protect themselves by making sure they are vaccinated against measles. CDC recommends that travelers to England protect themselves by making sure they are vaccinated against measles with the MMR measles, mumps and rubella vaccine. Travelers to the Philippines should make sure they are vaccinated against measles with the MMR measles, mumps, and rubella vaccine. Measles in the Philippines Measles in the Philippines May 02, There is an outbreak of measles in the Philippines. CDC recommends that travelers to Ukraine protect themselves by making sure they are vaccinated against measles. CDC recommends that travelers to Serbia protect themselves by making sure they are vaccinated against measles. Travelers to France should make sure they are vaccinated against measles with the MMR measles, mumps, and rubella vaccine. Between April and July , more than , cholera cases and nearly 2, deaths have been reported. CDC advises people traveling to China to avoid contact with poultry including poultry markets and farms , birds, and their droppings and to avoid eating undercooked poultry. Infected birds that appear healthy may still be able to transmit this virus to humans. As of April 5, , these definitions have been refined to make the announcements more easily understood by travelers, health-care providers, and the general public. The definitions are laid out below. They describe both levels of risk for the traveler and recommended preventive measures to take at each level of risk.

**Chapter 4 : Site Not Available**

*A number of health issues – from pre-existing conditions to Medicaid expansion to changes to Medicare – could be at stake when voters head to the polls Tuesday.*

All Stats Agriculture Statistics and graphs related to agriculture are found here. How many agricultural workers are there per hectare? Which country produces the maximum cotton? Who is the biggest exporter of bananas? Click in if these interest you. Get a quick summary of countries in this section. We have all of that and more out here. Actually we go deeper than your routine crime beat sections. How many adults were prosecuted? What percentage were convicted? How many were women? What is the death penalty rate in different countries? How safe do the citizens perceive they are? Do they trust the police? Will they report a crime? Learn the details of the losses incurred by the countries affected. How are the developed countries helping out? Who has pledged the most money? How do they compare? You get the idea. What is the duration of education in different countries? Is the percentage of enrollment different for sexes? How long do students spend learning their mother tongues? What is the mathematical aptitude of the average 8 year old? How many university degrees are awarded to females? What is the percentage of students who find school boring? Children out of school, primary , Pupil-teacher ratio, primary , Compulsary education duration and more Energy How does your country fare in Traditional Fuel Consumption? In Geothermal Energy Consumption? How many barrels of oil were imported into your country last year? Does your production of hydroelectricity match your consumption? Which countries in the world successfully produce nuclear energy for consumption? What is the average energy usage per person? All your questions regarding different forms of energy, their generation and consumption have been answered here. How many endangered species of reptiles, mammals, birds etc are found in different countries? What are the national levels of pollution? Salination of water resources and expenditure for waste treatment. International treaties, ratification and compliance. This implies that if you are looking for the co-ordinates or map references of countries, the land area, climate, boundaries, terrain, natural resources or coastlines, your search ends here. You can find stats related to birth weights, rates on smoking, HIV incidence, incidence of cancer, circulatory and other diseases, stats on infant and maternal mortality, life expectancy, suicide rates, teenage pregnancy and other health related topics. We also have some details on health expenditure and health care funding out here. How many female decision makers does a country have? What is the normal gender division of the housework? What are the unemployment details and benefits available? How long does an average person need to work to buy a loaf of bread? Compare these values for different countries. How many English language speakers are there per country? How about French and Spanish? Check out the results here.. Languages , Major language s , French status and 21 more Lifestyle Here we rank countries based on amphetamine and cannabis use. But more interestingly, we go into their mindset. What do the citizens of different countries think of their armed forces? Do they trust their neighbours? What about their governments? Are they happy with life in general? How charitable are they? What is their political orientation? Are they proud of their countries? Will they fight for their countries? This is an utterly captivating category. We also have other stats related to media like vastness of different networks, revenue and employment in different telecom sectors here. The number of tanks in Germany? Want to compare the weapon holdings in North and South Korea? Worried about the WMDs world over? Need to know the exact number of countries who have signed terrorism conventions? Or just curious about the coalition forces in the Gulf War? So we have birth and death rates, marriage and divorce rates, single parents, one-person households and teenage pregnancies, size of households and elderly institutions, ethnicity and chinese population - just about every stat you always wanted to know! What is the average age of women when they first get married? How happy are they when compared to their mothers? What is the gender development index in different countries? What will the population be in ? Check them all here. What about the summer and winter olympics? What are the latest FIFA rankings? Which country has the maximum number of Mt. Get all the answers in this sports section. We hope to expand this category into timely and essential data you can rely on to make sense of global and national security, political and societal violence,

and our perceptions which are shaped by these notions. How many cars does a country have? What is the length of its highways? What proportion is paved? What about runways, heliports and ports? Lets not leave out waterways or the merchant navy. We have them all here.

**Chapter 5 : Florida Department of Health in Orange**

*In The Health of the Country, Conevery Bolton Valencius digs into the diaries, letters, and literature of settlers to unearth how these newcomers assessed the character and potential of the land to which they had so recently arrived.*

By Sean Ross Updated June 4, 2017 Economists and statisticians use several different methods to track economic growth. The most well-known and frequently tracked metric is gross domestic product GDP. Over time, however, some economists have highlighted limitations and biases in GDP calculation. Some suggest measuring economic growth through increases in the standard of living, although this can be tricky to quantify. Gross Domestic Product Gross domestic product is the logical extension of measuring economic growth in terms of monetary expenditures. If a statistician wants to understand the productive output of the steel industry, for example, he needs only to track the dollar value of all of the steel that entered the market during a specific period. Combine the outputs of all industries, measured in terms of dollars spent or invested, and you get total production. At least that was the theory. Unfortunately, the tautology that expenditures equal sold-production does not actually measure relative productivity. In other words, economic growth needs to somehow measure the relationship between total resource inputs and total economic outputs. Its solution was to use GDP to measure aggregate expenditures , which theoretically approximates the contributions of labor and output, and to use multi-factor productivity MFP to show the contribution of technical and organizational innovation. Gross National Product Those of a certain age may remember learning about gross national product GNP as an economic indicator. GNP measures the total income accruing to the population over a specified amount of time. In 1991, the BEA began using GDP, which was already being used by the majority of other countries; the BEA cited easier comparison of the United States with other economies as a primary reason for the change. The income of the factories would be included in GDP, as it is produced within domestic borders, but not in GNP, since it accrues to non-residents. Comparing GDP and GNP is a useful way of comparing income produced in the country and income flowing to its residents. Most economists agree that total spending, adjusted for inflation , is a byproduct of productive output. They disagree, however, if increased spending is in itself an indication of growth. Consider the following scenario: In 1991, the average American works 44 hours a week being productive. Suppose there is no change in the number of workers or average productivity for 1992. However, Congress passes a law requiring all workers to work for 50 hours a week instead that year. Does this constitute real economic growth? Some would certainly say yes. After all, total output is what matters to those who focus on expenditures. For those who care about productive efficiency and the standard of living , this question does not have a clear answer. With an unlimited demand for war supplies and government financing, the standard metrics of economic health would show progress. But would anyone be better off?

## Chapter 6 : Statistics in Category: Health

*Pages in category "Health by country" The following 13 pages are in this category, out of 13 total. This list may not reflect recent changes ().*

Dr Fenton Ferguson Minister of Health The Government of Jamaica is aware of the strategic value of health to the transformation of the Jamaican society and the critical role health must play in reconstructing the social landscape of the country. Since the health system figures predominantly in reversing the cycle of poverty, access to quality services especially for the most vulnerable is atop the development agenda. In keeping with the World Health Organization philosophy of health as a fundamental right of every citizen, the Government is keen on providing universal access to quality care at the primary level, while investments are made to improve the infrastructure and service delivery at the secondary and tertiary levels. The public health sector accounts for some 5, hospital beds, while the private sector provides approximately beds serving a population of 2. Since cardiovascular diseases, diabetes and cancers have been the leading causes of death in Jamaica. Hypertensive diseases and ischemic heart disease were ranked third and fourth while breast cancer and cervical cancer ranked sixth and eighth. The four underlying risk factors " tobacco use, unhealthy diets, physical inactivity and the harmful use of alcohol " are largely responsible for the development of NCDs. These risk factors are fairly common in Jamaica. Almost a half of the adult population was classified as having low physical activity or being inactive. The Government believes that increased focus on community involvement in care through the development of primary healthcare is the best approach to combating these conditions and to addressing these health realities. The Ministry of Health has therefore invested in a programme of primary healthcare renewal through which it has embarked on the establishment of four Centres of Excellence at the primary care level, one in each of the four Regional Health Authorities and to date has refurbished over 80 health centres islandwide to better equip them to provide optimal service in keeping with the needs of their respective communities. Some of the gains that we boast today have been built on the foundation of a strong primary healthcare system. This is characterised by a good network of community based health centres, hospitals that are strategically located, active community participation in health and a well-trained and dedicated cadre of healthcare professionals as well as the provision and expansion of the health infrastructure. The government is laying the foundation for a brighter, healthier future with an emphasis on providing quality healthcare for all, with universal access at the primary healthcare level. In this way we can achieve the mission of Jamaica being the place of choice to live, work, raise families and do business as outlined in our National Development Agenda, Vision Rainfall ranges from 1, mm p. Jamaica lies in the hurricane zone. The most significant environmental issues are deforestation; pollution of coastal waters by industrial waste, sewage and oil spills; damage to coral reefs; and air pollution in Kingston due to vehicle emissions. Jamaica is classified as an upper-middle-income economy by the World Bank. Non-communicable diseases Government health expenditure:
