

Chapter 1 : The Remarkable Book of Moses - ensign

The Remarkable Invention That Saves Zion. by Yehudit Stupeniker Author) Be the first to review this item. See all formats and editions Hide other formats and editions.

Visit Website Magnetic compasses may have been made somewhat obsolete by satellites and global positioning systems, but their impact on early navigation and exploration was inestimable. Originally invented in China, by the 14th century compasses had widely replaced astronomical means as the primary navigational instrument for mariners. Most importantly, the compass allowed for interaction—both peaceful and otherwise—between previously isolated world cultures. The inception of paper money ushered in a bold new era—a world in which currency could purchase goods and services despite having no intrinsic value. Paper currency was widely used in China in the ninth century, but did not appear in Europe until the late s. Spurred on by frequent shortages of coins, banks issued paper notes as a promise against future payments of precious metals. By the late 19th century many nations had begun issuing government-backed legal tender that could no longer be converted into gold or silver. The switch to paper money not only bailed out struggling governments during times of crisis—as it did for the United States during the Civil War—but it also ushered in a new era of international monetary regulation that changed the face of global economics. Perhaps even more importantly, paper currency was the vital first step in a new monetary system that led to the birth of credit cards and electronic banking. Evidence of steel tools dates back 4, years, but the alloy was not mass-produced until the invention of the Bessemer Process, a technique for creating steel using molten pig iron, in the s. Steel then exploded into one of the biggest industries on the planet and was used in the creation of everything from bridges and railroads to skyscrapers and engines. Pioneered in the early 19th century by Humphry Davy and his carbon arc lamp, electric lights developed throughout the s thanks to the efforts of inventors like Warren de la Rue, Joseph Wilson Swan and Thomas Alva Edison. It was Edison and Swan who patented the first long-lasting light bulbs in and , liberating society from a near-total reliance on daylight. Electric lights went on to be used in everything from home lighting and street lamps to flashlights and car headlights. The complex networks of wires erected to power early light bulbs also helped lead to the first domestic electrical wiring, paving the way for countless other in-home appliances. They enabled people to travel great distances and gave different cultures the chance to trade and exchange ideas and technology. Equine strength and agility meant that horses could also carry cargo, plow farmland and even clear forests. Perhaps most influential of all, horses changed the nature of war. Nothing was more feared than a horse-drawn chariot or a mounted warrior, and societies that mastered the use of cavalry typically prevailed in battle. First developed in by Bell Laboratories, these tiny semiconductor devices allow for precise control of the amount and flow of current through circuit boards. Originally used in radios, transistors have since become an elemental piece of the circuitry in countless electronic devices including televisions, cell phones and computers. Magnifying Lenses Magnifying lenses might seem like an unremarkable invention, but their use has offered mankind a glimpse of everything from distant stars and galaxies to the minute workings of living cells. Lenses first came into use in the 13th century as an aid for the weak-sighted, and the first microscopes and telescopes followed in the late 16th and early 17th centuries. These early uses were the first steps in the development of astonishing devices like the electron microscope and the Hubble Space Telescope. Magnifying lenses have since led to new breakthroughs in an abundance of fields including astronomy, biology, archeology, optometry and surgery. Telegraph lines multiplied throughout the s, and by transoceanic cables encircled the globe. The original telegraph and its wireless successors went on to be the first major advancements in worldwide communication. The ability to send messages rapidly across great distances made an indelible impact on government, trade, banking, industry, warfare and news media, and formed the bedrock of the information age. Scientists like Louis Pasteur and Joseph Lister were the first to recognize and attempt to combat bacteria, but it was Alexander Fleming who made the first leap in antibiotics when he accidentally discovered the bacteria-inhibiting mold known as penicillin in . Antibiotics proved to be a major improvement on antiseptics—which killed human cells along with bacteria—and their use spread rapidly throughout the

20th century. Nowhere was their effect more apparent than on the battlefield: While nearly 20 percent of soldiers who contracted bacterial pneumonia died in World War I, with antibiotics that number dropped to only 1 percent during World War II. Antibiotics like penicillin, vancomycin, cephalosporin and streptomycin have gone on to fight nearly every known form of infection, including influenza, malaria, meningitis, tuberculosis and most sexually transmitted diseases. The Steam Engine Cars, airplanes, factories, trains, spacecraft—none of these transportation methods would have been possible if not for the early breakthrough of the steam engine. The first practical use of external combustion dates back to 1698, when Thomas Savery developed a steam-powered water pump. Steam engines were then perfected in the late 1700s by James Watt, and went on to fuel one of the most momentous technological leaps in human history during the Industrial Revolution. Throughout the 1800s external combustion allowed for exponential improvement in transportation, agriculture and manufacturing, and also powered the rise of world superpowers like Great Britain and the United States.

Chapter 2 : Invention - Definition for English-Language Learners from Merriam-Webster's Learner's Dictionary

E-mail Given by revelation while the Church was in its infancy, this book restored precious knowledge long lost from scripture. As early as June , opposition to the newly organized Church had become a force to be reckoned with. Intolerant neighbors and outsiders harassed the members. At times bigotry erupted into mob rule. Not unexpectedly, much of this malevolent force was directed toward the Prophet Joseph Smith. That June a mean-spirited constable arrested and verbally abused the Prophet for the better part of a day. The constable refused to allow Joseph to eat. It was not until that evening, after traveling 15 miles, that the lawman stopped at a tavern for refreshment. Even during the meal, he continued to torment the Prophet. The book is remarkable in the number of doctrinal insights peculiar to itself. One important insight comes from the way the book developed. The Lord gives doctrine incrementally, testing his people and giving them more as they are willing and worthy to accept more. Details flowed in further revelations that gave the Prophet even greater understanding about the Creation and, more important, about the Creator. It described the doctrinal understanding given to Moses through two revelations from God; the revelation also described an appearance by Satan. The vision allowed Moses to experience, to a degree, the glory of God. The term glory, as used in the book of Moses, means more than mere radiance. It describes unimaginable power, capacity, and knowledge. Under its enabling influence, Moses saw and understood the history of the earth. In the power of that divine glory, Moses, like Enoch, the brother of Jared, and others, saw both the past history and future condition of the earth. Then a journal entry explained: To the joy of the little flock, which in all, from Colesville to Canandaigua, New York, numbered about seventy members, did the Lord reveal the following doings of olden times, from the prophecy of Enoch. In vision, the faithful ancient prophet saw the first coming of the Lord and his atoning sacrifice. The vision then swept to the last days, when Zion would again be established and the Savior again would walk among his Saints. Publication and Canonization When the Prophet Joseph Smith first released the whole series of Moses revelations to the Church in December , he lumped them into two distinct documents. The Prophet continued to ponder and work on the Moses revelations as time allowed over the next few years, and his work was published in various Church newspapers. However, the published excerpts were only segments of what would later become the book of Moses. Richards, also of the Quorum of the Twelve Apostles. During general conference in October , the Saints accepted this remarkable book along with the rest of the Pearl of Great Price as one of the standard works of the Church. It is of note that the powerful doctrines contained in the book of Moses and the other books in the Pearl of Great Price were not canonized until the Lord had proved his Saints. When they showed themselves hungry for these precious morsels of his word, he inspired his prophets to make the Pearl of Great Price binding as scripture. Truths Restored It is little wonder that the Saints loved this work. There was information in it they could get from no other source. Many Latter-day Saints may not understand the significance of revelation showing that Adam had this knowledge. But nowhere in the Old Testament, as it stands today, do we find a stated connection between the law of sacrifice and the Atonement. In restoring some of these words, Joseph Smith recorded in the book of Moses how Adam received the law of sacrifice. Some time after expelling Adam and Eve from Eden, the Lord responded to their fervent prayers. The faithful couple did so. After many days, an angel appeared to Adam asking him if he understood the significance of what he was doing. The angel then explained: Thus Adam learned that the redemption for all humankind would come only through the Son and that sacrifices were a type or shadow designed to reinforce that principle. The War in Heaven Another important insight peculiar to the book of Moses is the background it offers on the War in Heaven. This passage clearly shows that Lucifer did not have a plan of his own. First, someone had to be sent. The Greek word for sent is the root of our word apostle, the chief of whom, according to Paul, is the Savior; see Heb. Still, he wished to make three significant modifications: On the surface, these might not look harmful, but our Father could see exactly what Lucifer intended. Power, including priesthood

power and authority, not mere honor, was the goal Lucifer was pursuing. He was willing to destroy agency as the price for redemption, and he was willing to hold redemption hostage as the price for power. The result was terrible to behold. Power over others would be his, one way or another. Indeed, the book of Moses goes on to show what motivated Satan to tempt Adam and Eve. He had plans for doing that, but he needed mortal assistance. Satan well knew Cain and his qualities from the premortal existence. Cain obeyed, not out of faith in Christ but with love for Satan. Though the Lord declined the sacrifice, he worked with Cain, warning him of the consequences of following the path he was on. How would Satan do this? By having Cain form a secret combination. It has been pointed out that what Satan taught Cain and his brethren was not only how to exchange a human soul for a flock of sheep but also how to turn life into property. Through similar secret combinations, Satan still seduces those who love him more than they love God. Great sins of immorality result when people crave things and use other people to obtain them, thus serving their own gratification before God and all else. Jesus Christ As Creator and Savior In addition to giving extremely clear attention to the dark side of our mortal sojourn, the book of Moses also provides unique insights into the relationship between the Father and the Son and teaches us how the Savior is God the Creator. This very helpful information about our Lord and Exemplar, Jesus Christ, is not so plainly expressed in the Bible. Any attempt to imagine their number boggles the mind. The book of Moses also discloses that the Savior has not ceased his creative work. Clearly the Father has placed the word of his power in the Son. The statement is simple, direct, and yet profound. The work of God is focused not on creating planets or organizing solar systems but on exalting his children. It is this work that brings him glory and honor. Here the word glory, in addition to radiance or splendor, also may mean delight. Of course, he does not seek renown in selfishness or pride, as if he were worried about his dignity and needed us to buoy it up. But his works induce reverence, awe, gratitude, and respect in others and encourage those whose hearts are profoundly touched to follow him, doing his will and becoming candidates for exaltation. Their praise of the Father adds to his glory or repute, in turn causing others to honor, reverence, and obey. These in turn may then pursue exaltation and bring our Father additional glory and joy. And thus it continues. This remarkable book, given to us as line was added to line and precept to precept, bears powerful testimony that the Father works through the Son. It is a witness of his willingness to reveal eternal and historical truths to his children as they are ready to receive them. And his purpose in it all is the ultimate happiness and exaltation of his children. Barrett Illustrated by Robert T.

Yehudit Stupeniker Remarkable Invention That Saves Zion, The (Amazon - Alibris) Series: Tale of Triz, A Internet links If you know Operation Wild: Episode 3 - WGBH - Witness keyhole surgery on a giant tortoise and extreme dentistry on a five-ton elephant. Find out if a remarkable invention can help a dolphin swim again.

Conclusion The purpose of this article is not to analyse a literary hypothesis but to solve definitely and for all time, a mystery that is causing destruction to all the peoples of the world. Is there a single country that has escaped the depression which has thrown its sinister shadow on our life since ? The statesmen are seemingly powerless and seek in vain for means to avert the fall of the nations of the world, into the pit of bolshevism. Our entire Christian civilization is in danger of going down in smoke and chaos. How can we check that moral cancer that devours slowly all that is beautiful and noble in every nation? How can we save our spiritual inheritance, which is many times more valuable than all material wealth? No cure is possible as long as we do not understand the cause of our ailment; a correct diagnosis must precede the application of the medicine in order to relieve the sickness which we all observe around us, but do not comprehend. No recovery is possible until the tools of destruction are taken away from these nefarious poison mixers of the universe. Adolph Hitler realized this. A howl of rage from all corners of the world was the answer to his quick action - but he tore the burning fuse from the bomb set to explode in the summer of And but for this quick action, Germany today would be suffering the tragic lot of Russia. This article must not be considered as the product of "religious intolerance of the middle ages," nor as an attempt to stir up pogroms and persecution, as the greater part of the world press, would like to have you believe, in order to mislead public opinion at the behest of Judah. No, we certainly do not recommend anything that can appear so gruesome and unjust. All that we demand, is the elimination in all countries, of those persons in key positions, who do not merit confidence. Such an unavoidable housecleaning was performed in Germany, to the relief of the population, after its long period of suffering. From now on, the truth cannot be concealed. Facts carefully hidden by obscure conspirators are now common knowledge among sixty million people. Conscienceless criminals have decided to destroy the existing order of the whole world and to impose upon it the rule of a Satanical Messiah. The yeast is fermenting. In many countries there are men who perceive the impending danger and work in the direction of uniting forces for he struggle against the common enemy. There will be no obstacles in the way of creating friendly relations among Christian Gentile nations as soon as traitors, who cause continuous friction, are eliminated. The truth will come out into the daylight and all who will struggle against it, will be ground down, and this is the truth which must be loudly proclaimed. The depression was deliberately planned for a certain hour and had been directed carefully and groomed, through decades by criminals obsessed with the lust for power, murder and greed. The actual program was drawn up about 40 years ago and was first revealed in print, in a small pamphlet known as "The Secrets of the Learned Elders of Zion. They quickly disappeared from circulation and attracted little or no attention. One copy nevertheless reached the British Museum in and was catalogued under the number D. The London "Times" stated on August 17, The astounding breakdown of a great state due to attack by Bolshiviks and the presence of countless Jews among them, had the result that many people were looking for - reasonable explanations of the catastrophe. The "Protocols" furnished this explanation, especially as the tactics of the Bolsheviks at many points, were identical with the recommendations of the "Protocols. One edition dated in German bears the title "The Jewish-Danger;" it attracted much attention. Public opinion became excited through the sudden revelation of this hellish conspiracy for the destruction of the Christian Civilization. The "Morning Post" of London devoted several columns to this subject. A sensational article appeared in the "Times" of May 8, , from which the following quotation was taken: Has a gang of criminals really drawn up such plans and is triumphing over their fulfilment? Are they a forgery? But how can one explain then this terrible prophetic gift that foretold all this before hand? Did we fight all these years to destroy the world power of Germany only to find ourselves now facing a much more dangerous enemy? Is there any wonder then that the powerful influences against which this terrible indictment is directed, made all possible efforts to bring this document into discredit? Clever steps

were undertaken to prove that the "Protocols" were forgeries. The Jews have again and again disputed their authenticity. There is still pending in the Courts of Berne, Switzerland, in which a publisher is accused of defamation for his allegations as to the genuineness of the "Protocols. On the 16th, 17th and 18th of August the London "Times" published a series of articles in which it asserts that the "PROTOCOLS" are only a clumsy fraud produced by a conscienceless plagiarist who paraphrased a book published in Brussels in The "Times" published several passages from both books in parallel columns thus proving beyond any doubt the spiritual kinship between them. The forgery version seemed to be well established. Indeed so, since the matter in question is of tremendous importance! The last of these articles terminated with the following words: Let the "Legend" now become a matter of the past. There are many circumstances that make it impossible to accept the assertion of the "Times" as a final decision. Something is rotten in Denmark And if we investigate we make some interesting discoveries. This statement to our knowledge was never refuted. The "Times" explains that the "Forgery" was discovered "accidentally. According to the "Times" a "correspondent" in Constantinople became acquainted, by mere luck, with a certain Russian. Wishing to remain incognito, he was referred to as "Mr. X" This mysterious stranger handed the correspondent of the "Times" the particular booklet by Joly which made it possible to discover the "Forgery. In fact anyone may become a correspondent of a newspaper by simply writing a letter. No evidence was produced that this correspondent ever was in Constantinople and met a Russian there. The identity of "Mr. Why so much mystery about it? The names of the two gentlemen rightly deserve to be the possession of posterity, especially in consideration of the tremendous service rendered to Israel. The "Correspondent" hinted that the "Forgery" was concocted with the purpose of influencing the conservative Russian Court against the Jews by rendering to the imaginary "Jewish Peril", the aspect of reality. But no evidence what-so-ever was produced in this respect. That problem was never solved. Several untenable theories were advanced. The mind of the reader was switched at lightning speed from Constantinople to St. Petersburg and from Corsica to London The game was won! The "Times" proclaimed triumphantly that "indisputable evidence" was produced!!! Now, if this watered "evidence" is properly scrutinized and subjected to distillation the only solid substance that is left is the fact that one of the books represents an overwriting and further development of the other one. Under these circumstances can the ugly word "Forgery" be applied? A further development and widening of a certain text can not be classified as "Forgery," otherwise every preacher who quotes a passage from the Bible without mentioning the verse and chapter would also be considered as a forger and plagiarist. Such a conclusion is simply ridiculous when we consider that the Holy Scriptures contain many parallel passages. We respectfully invite the attention of the Honorable Elders of Zion to the following passages of the Holy Scripture: Kings 18,14 also preceding verses as compared to Isaiah The text is nearly identical. Moses 36,31 and preceding verses as compared with word to word reproduction in I. Suppose that the above passages were printed in parallel columns as was the case with the "Protocols" and the book of Joly the result would be just as convincing that one of the Scriptures is a paraphrase of the other. Would this justify the statement that a clumsy fraud was concocted and that one of the Scriptures was a forgery? It is evident that since Moses is the author of I. Book of Moses and the book I. This uniformity has a certain purpose - it shall furnish in the "Last Days" the all smashing argument against the hords of Anti-Christ. They were using in their writings material with which they were familiar beforehand. Shall the Rabbis continue to insist on a "forgery" then also their own Prophets shall be accused as they committed the same "crime. The path we are following is getting warmer - we step on dangerous soil! Let us find out who is the gentleman identified as Maurice Joly; the mysterious correspondent from Constantinople "incidentally" paid no attention to his identity. Who was this "Frenchman," the author of the "Dialogues in Hell? Israel is doing its utmost to prove that the "Protocols" were written with the purpose of bringing the jews into contempt - and now there is evidence that this satanical plan as outlined in both of these books has the same Jewish heart and the same jewish mind as a source of origin. Fry contains much valuable information regarding Maurice Joly Moses Joel. In the "Memoirs of Rene Mareuil," one of the members of the Ministerial Cabinet of Polignac of France is stated that Maurice Joly was born in and was employed in in the ministry at Chebreau as a minor employee. Later he became a communist and was jailed for two years. In he committed suicide, and at his burial the Jew Gambetta former prime minister of France delivered a post-mortem speech. It

should be remembered that Gambetta played a certain part in the French commune, that Bolshevik reign of terror that existed in France from March 18th to May 29th, , during which time Paris was robbed and ruined. Nevertheless, by a most remarkable "coincidence none of the houses owned by Alphonse Rothschild were damaged. What are the conclusions that can be drawn from the foregoing information? The Jewish author that furnished the inspiration for the "Protocols" did not confine himself to nefarious theories; he did not hesitate to apply them practically in criminal actions. The "Protocols" have nothing whatsoever to do with the Russian Secret police, as the "Correspondent" of the "Times" infers. The "Dialogues" are not a creation of an anti-semite, but on the contrary they represent the Quintessence of Jewish Idealism. The satanical development of ideas of this book is extracted from a still older work, thus proving Joly to be a plagiarist himself. The author of this book was the Jew Jacob Venedey.

Chapter 4 : Stepping Into Zion - University of Alabama Press

JIM BOWLING, HERALD & REVIEW Sam Wise,10, left, and Jackson Bilyeu,9, experiment with optibots (self-driving robots) during Camp Invention at Mount Zion Intermediate School Tuesday.

Fatal "Morality" of the Jew No. A Protocol of No. A Protocol of The Manifesto No. Adler emphasized the point that Mr. Ford had classified the articles in the Dearborn Independent as a bundle of lies, or words to that effect. It does not require a Sherlock Holmes in the realm of literary science to prove that the construction of the Protocols was from within and not from outside sources. A study of current events since their production also prove that the power which produced the Protocols had the power to accomplish their program or, as Mr. Ford has been quoted, that everything was coming along just as announced in the Protocols. A prefatory note to the Second Edition says: The answer to this all-important question is, that not only has the plot existed, but it is now on the verge of complete fulfillment. The contents of the pamphlet here given to the public trace some of the steps in the working out of the conspiracy which have come to light. Whenever a Jew makes a statement of that kind it must be read in the exact reverse sense: Judaism is the Satan of Christianity. Taken as a whole, everything today is Jewdified. Our senses are alive to all the races. Our spirit reigns over the world. We are the Lords; all that is Might today is child of our spirit. Let them drive us out: Let our enemies laugh at our physical weakness: We cannot be driven out any more. We have eaten ourselves into the peoples. We have vitiated the races of the Europeans. We have tarnished and broken their power; we have made everything of theirs foul, rotten, decomposed, decayed. The 4 Protocols of Zion are four variations playing the same tune and by the same performer. In its usual sense it is a term of diplomacy and means the summary or precis of an official document gummed on its front page. Hence the word has come to mean minutes, or a rough draft of any document or record of proceedings. It is in this sense that the term is used in the title of the book known as The Protocols of the Learned Elders of Zion. A translation of it was first published in this country England in by Messrs. That it should be repudiated by Jews is only natural, since it was never intended that Gentiles should see it. There are many other parallel statements of Jewish policy, dating from many centuries past and coming down to our most recent times. Of these we now present Four to our readers. The first of the four dates from the fifteenth century and, as it first appeared in a Rothschild-owned journal, it is not likely that this will be pronounced a forgery. The second is the manifesto of Adolphe Cremieux, addressed to the nation of Jewry on the occasion of the founding of the Universal Israelite Alliance. It proclaims three incontrovertible truths, 1 that the Jewish nation is the enemy of all other nations. The date of this Protocol, No. This was in But the ceremony did take place, and the Jew Sonol took with him to it a friend named Readcliffe. It is probable that when the latter was published it was not imagined that any Gentiles would even think of connecting it with other documents emanating from Jewry, or with modern happenings. It reveals identically the same plans and purposes of the Jews for World Dominion and revenge which pervades them all. This one especially gloats over the Jew conquest and enslavement of Russia. In one word the principle of Judaism is Separatism that is, Pharisaism, self-righteousness, and enmity to all other races. From this it necessarily follows that Jewry claims the right to treat all the rest of the world accordingly. Oscar Levy to Mr. George PittRivers The World Significance of the Russian Revolution, we find this passage dealing with the morality, or, rather, immorality of the Jewish religion. There is no wonder that the Jew power which controls the government of this country insisted on the expulsion of Dr. Levy is one of those very rare Jews who can look at the world from a HUMAN standpoint, and in a Jew that is an unpardonable crime with Jewry, and, according to the Talmud, is deserving of the death penalty. It is a cardinal sin in a Jew not to favor a Jew at the expense of a non-Jew. Hence a Jew in office must appoint a Jew to every available post within his gift. What should the Jews do? This was the reply: We are pierced by as great pain to hear it as yourselves. Compared with the items of the following Protocol of , it will be seen that the spirit of both is identically the same. On his tomb he requested the following sole inscription to be inscribed: On top the tablets of Moses, a little lower two extended hands clasping each other, and as basis of the whole the globe of the earth. Other peoples and races are divided into nationalities; we alone have not co-citizens, but exclusively co-religionaries. No matter where fate should lead

though scattered all over the earth, you must always consider yourselves members of a Chosen Race. Catholicism, our immemorial enemy, is lying in the dust, mortally wounded in the head. The time is near when Jerusalem will become the house of prayer for all nations and peoples, and the banner of Jewish mono-Deity will be unfurled and hoisted on the most distant shores. Let us avail ourselves of all circumstances. Our might is immense learn to adopt this might for our cause. What have you to be afraid of? The day is not distant when all the riches and treasures of the earth will become the property of the children of Israel. More than sixty years have elapsed since this Protocol was written, and the riches of the earth are now almost entirely in the possession or under the control of the Children of Israel. The general ideas formulated by the Rabbi are found fully developed in the Protocols. It is perfectly clear that the funeral oration and the Protocols of the Elders of Zion come from one and the same mint. Both are prophetic; and the power which made the prophecies has been able to bring about their fulfillment. This oration is so important that we append to it an account of the fulfillment of each of the sections. There can no longer be any doubt as to whose is the power which is disturbing the world, creating World Unrest, and at the same time reaping all the profits. Jewry is enslaving all Christian peoples of the earth. Every hundred years, We, the Sages of Israel, have been accustomed to meet in Sanhedrin in order to examine our progress towards the domination of the world which Jehovah has promised us, and our conquests over the enemy Christianity. This year, united over the tomb of our reverend Simeon ben Ihuda, we can state with pride that the past century has brought us very near to our goal, and that this goal will be very soon attained. Gold has always been and always will be the irresistible power. Handled by expert hands it will be the most useful lever for those who possess it, and the object of envy for those who do not. With gold we can buy the most rebellious consciences, can fix the rate of all values, the current price of all products, can subsidize all state loans, and thereafter hold the states at our mercy. Already the principal banks, the exchanges of the entire world, the credits of all the governments are in our hands. The other great power is the Press. By repeating without cessation certain ideas, the Press succeeds in the end in having them accepted as actualities. The Theatre renders us analogous services. Everywhere the Press and the Theatre obey our orders. By the ceaseless praise of Democratic Rule we shall divide the Christians into political parties, we shall destroy the unity of their nations, we shall sow discord everywhere. Reduced to impotence they will bow before the Law of Our Bank, always united, and always devoted to our cause. We shall force the Christians into wars by exploiting their pride and their stupidity. They will massacre each other and clear the ground for us to put our own people into. The possession of the land has always brought influence and power. In the name of Social Justice and Equality we shall parcel out the great estates; we shall give the fragments to the peasants who covet them with all their powers, and who will soon be in debt to us by the expense of cultivating them. Our capital will make us their masters. We, in our turn, shall become the great proprietors, and the possession of the land will assure the power to us. Let us try to replace the circulation of gold with paper money; our chests will absorb the gold and we shall regulate the value of the paper which will make us masters of all the positions. We count among us plenty of orators capable of feigning enthusiasm and of persuading mobs. We shall spread them among the people to announce changes which should secure the happiness of the human race. By gold and by flattery we shall gain the proletariat which will charge itself with annihilating Christian capitalism. We shall promise workmen salaries of which they have never dared to dream, but we shall also raise the price of necessities so that our profits will be greater still. In this manner we shall prepare Revolutions which the Christians will make themselves and of which we shall reap the fruit. By our mockeries and our attacks upon them we shall make their priests ridiculous then odious, and their religion as ridiculous and odious as their clergy. Then we shall be masters of their souls. For our pious attachment to our own religion, to our own worship, will prove the superiority of our religion and the superiority of our souls. We have already established our own men in all important positions. We must endeavor to provide the goyim with lawyers and doctors; the lawyers are au courant with all interests; doctors, once in the house become confessors and directors of consciences. But above all let us monopolize education.

The Remarkable Invention That Saves Zion A Tale of Triz, Yehudit Stupniker, Aug 30, ,, pages. Four Israeli students and their visiting American cousin accidentally allow the Professor's.

It was the largest operating solar pond ever built for electricity generation and operated up until Solar water heater Solar water heater on a rooftop in Jerusalem In the s there was a fuel shortage in the new Israeli state, and the government forbade heating water between 10 a. As the situation worsened, engineer Levi Yissar proposed that instead of the construction of more electrical generation plants, homes should switch to solar water heaters. The tariff is limited to a total installation of 50MW during 7 years, whichever is reached first, with a maximum of 15 kWp installation for residential and a maximum of 50kWp for commercial. Nano science and solar energy With its strong basis in nanotechnology and science, GTEP is pioneering the field of nano-energy. Efrat Lifshitz discovered that nano-sized materials consisting of nanocrystal quantum dots can absorb sunlight not only in the visible range, as materials currently used in solar panels do, but also in the infrared and UV ranges. This makes them ideal in photovoltaic cells used to turn sunlight into electricity, promising much more efficient solar power. Nir Tessler leads a group on organic photovoltaic material. Gitti Frey specializes in organic electronics - plastic electronics that are functional electronically and optically. They emit light and can transmit electrical signals, or absorb light and generate energy such as electricity. Frey introduces whole new properties in this field, creating effective and useful self-organizing structures on the nano-scale. Frey is working on a solar cell to convert sunlight into electrical energy. She predicts this research will lead to solar-power systems which are cheaper, unbreakable, flexible, more aesthetic and versatile. National Solar Energy Center[edit] Main article: A prototype ready for commercialization achieved a concentration of solar energy that was more than 1, times greater than that from standard flat panels. It has a solar energy research program that has assisted in the development of passive heating , involving the mitigation of extremes of heat and cold in the desert through efficient storage from day to nighttime. One research project is an inhabited adobe house with rational fenestration. Prisms that transmit heat during the day are installed in the room and can be rotated to allow the heat to discharge at night. There is a double-skin greenhouse that uses copper sulfate solution as a heat screen during the day. The liquid is pumped between the two skins, protects the interior from ultraviolet rays, and collects heat. At night the liquid is recirculated, returning the heat to the greenhouse. Weizmann Institute Solar Research Facilities Unit[edit] In addition to a solar reactor, [26] the solar research facilities of the Weizmann Institute of Science are among the most advanced laboratories in the world for concentrated solar energy research.

Chapter 6 : 11 Innovations That Changed History - HISTORY

Remarkable Invention Saves Australia from the Cane Toad: Queensland Australia A bushies amazingly simple and uncomplicated invention is being credited with rescuing Australia from the Cane Toad swarm Cane Toads are a spreading plague across Northeast Australia a front moving at km per year in pl.

Rit was owned by Mary Pattison Brodess and later her son Edward. Kate Larson records the year as , based on a midwife payment and several other historical documents, including her runaway advertisement, [1] while Jean Humez says "the best current evidence suggests that Tubman was born in , but it might have been a year or two later. Edward Brodess sold three of her daughters Linah, Mariah Ritty, and Soph , separating them from the family forever. She later recounted a particular day when she was lashed five times before breakfast. She carried the scars for the rest of her life. She had to check the muskrat traps in nearby marshes, even after contracting measles. She became so ill that Cook sent her back to Brodess, where her mother nursed her back to health. Brodess then hired her out again. She rejected the teachings of the New Testament that urged slaves to be obedient and found guidance in the Old Testament tales of deliverance. Tubman was devout, and when she began experiencing visions and vivid dreams, she interpreted them as revelations from God. This religious perspective informed her actions throughout her life. Early in her life, she suffered a severe head wound when hit by a heavy metal weight. The injury caused disabling epileptic seizures, headaches , powerful visions, and dream experiences, which occurred throughout her life. There, she encountered a slave owned by another family, who had left the fields without permission. His overseer, furious, demanded that she help restrain him. She refused, and as he ran away, the overseer threw a two-pound weight at him. He struck her instead, which she said "broke my skull. These episodes were alarming to her family, who were unable to wake her when she fell asleep suddenly and without warning. This condition remained with her for the rest of her life; Larson suggests she may have suffered from temporal lobe epilepsy as a result of the injury. He continued working as a timber estimator and foreman for the Thompson family, who had held him as a slave. The lawyer discovered that a former owner had issued instructions that Rit, like her husband, would be manumitted at the age of Challenging it legally was an impossible task for Tubman. Most African-American families had both free and enslaved members. Edward Brodess tried to sell her, but could not find a buyer. Tubman and her brothers, Ben and Henry, escaped from slavery on September 17, Tubman had been hired out to Dr. Anthony Thompson, who owned a large plantation in an area called Poplar Neck in neighboring Caroline County; it is likely her brothers labored for Thompson as well. Because the slaves were hired out to another household, Eliza Brodess probably did not recognize their absence as an escape attempt for some time. Two weeks later, she posted a runaway notice in the Cambridge Democrat, offering a reward of up to dollars for each slave returned. Ben may have just become a father. The two men went back, forcing Tubman to return with them. She sang a coded song to Mary, a trusted fellow slave, that was a farewell. This informal but well-organized system was composed of free and enslaved blacks, white abolitionists, and other activists. Most prominent among the latter in Maryland at the time were members of the Religious Society of Friends , often called Quakers. At an early stop, the lady of the house instructed Tubman to sweep the yard so as to seem to be working for the family. When night fell, the family hid her in a cart and took her to the next friendly house. Particulars of her first journey remain shrouded in secrecy. When I found I had crossed that line, I looked at my hands to see if I was the same person. There was such a glory over everything; the sun came like gold through the trees, and over the fields, and I felt like I was in Heaven. She did sing a version of " Go Down Moses " to signal to her refugees along the path to freedomâ€”she changed the tempo to indicate that it was either safe or too dangerous to proceed. Like other Underground Railroad conductors, Tubman used various methods of communication specific to her own needs. Contrary to current popular belief, there were no common "codes" used by conductors. After the war, various black-faced minstrels included the song in their acts which helped popularize it. During the 20th century, people of all races sang it as a spiritual to pay tribute to Tubman or to various struggles for freedom. But I was free, and they should be free. Congress meanwhile passed the Fugitive Slave Law of , which heavily punished abetting escape and forced law enforcement officialsâ€”even

in states that had outlawed slavery to assist in their capture. The law increased risks for escaped slaves, more of whom therefore sought refuge in Southern Ontario then part of the United Province of Canada , which, as part of the British Empire , had abolished slavery. Tubman went to Baltimore , where her brother-in-law Tom Tubman hid her until the sale. Then, while the auctioneer stepped away to have lunch, John, Kessiah and their children escaped to a nearby safe house. When night fell, Bowley sailed the family on a log canoe 60 miles 97 kilometres to Baltimore, where they met with Tubman, who brought the family to Philadelphia. During her second trip, she recovered her brother Moses and two unidentified men. Still, a famous black agent, is credited with aiding hundreds of freedom seekers escape to safer places farther north in New York, New England, and present-day Southern Ontario. She once again saved money from various jobs, purchased a suit for him, and made her way south. John, meanwhile, had married another woman named Caroline. Tubman sent word that he should join her, but he insisted that he was happy where he was. Tubman at first prepared to storm their house and make a scene, but then decided he was not worth the trouble. Suppressing her anger, she found some slaves who wanted to escape and led them to Philadelphia. Because the Fugitive Slave Law had made the northern United States a more dangerous place for escaped slaves to remain, many escaped slaves began migrating to Southern Ontario. In December , Tubman guided an unidentified group of 11 fugitives, possibly including the Bowleys and several others she had helped rescue earlier, northward. There is evidence to suggest that Tubman and her group stopped at the home of abolitionist and former slave Frederick Douglass. It was the largest number I ever had at any one time, and I had some difficulty in providing so many with food and shelter. When an early biography of Tubman was being prepared in , Douglass wrote a letter to honor her. It read in part: You ask for what you do not need when you call upon me for a word of commendation. I need such words from you far more than you can need them from me, especially where your superior labors and devotion to the cause of the lately enslaved of our land are known as I know them. The difference between us is very marked. Most that I have done and suffered in the service of our cause has been in public, and I have received much encouragement at every step of the way. You, on the other hand, have labored in a private way. I have wrought in the day you in the night. The midnight sky and the silent stars have been the witnesses of your devotion to freedom and of your heroism. Excepting John Brown of sacred memory I know of no one who has willingly encountered more perils and hardships to serve our enslaved people than you have. She also provided specific instructions to 50 to 60 additional fugitives who escaped to the north. One admirer of Tubman said:

Chapter 7 : 5 remarkable inventions improving water quality across the globe

The reMarkable pen tip does wear down, however, and will need to be replaced from time to time, although the pen does cleverly conceal a spare tip hidden in the top of the pen. Photo by Chaim.

Cane Toads are a spreading plague across Northeast Australia, a front moving at km per year in places. The transformation for this very fortunate 27 year old from the outback has been dramatic. From a gruff and lonely existence riding horses all day and penning cattle, this incredible young man is now the "Pride of the Top End. I was battlin, broke and sore just six months ago. The Toad Muzzle is really a protector for the mouth, made of greenie gauze-like cloth tied with string. It was first used on pigs, then dogs and has gone thru several design evolutions to its present sleek, efficient form. The mouth guard "muzzle" is a barrier to the toxic flesh, wraps the near dead toad so no one has to touch it, and gets disposed of along with the animal. Cumming told his story. So we have to put something in their mouth to protect from getting messed up and that was the first Toad Muzzle. He got liver snaps for picking up toads and dropping in a bucket. And nope, he has no ill affect from any toads, still going strong too. With all the dogs in the vicinity capturing toads, over one million were collected and frozen within two weeks. To date its known one dog has received an injured foot from a natural obstacle. The Canine Protection and Promotion Guild has requested it be allowed to monitor the operation, intervening where necessary. Already one rat size dog has been denied participation fearing its own safety. The invention is only three weeks old and a huge success, ensuing new problems, from a shortage of dog treats to an overwhelming number of captured toads. The State of Queensland has met the challenge having quickly mobilized a military like effort to take immediate advantage of this amazing turn of fortune for its citizens. Freezer Lorries, collection buckets, and an army of eager dogs and dog handlers now fan out across towns and outback. Mini-factories crank out the cloth and string dog muzzles good for one use each. And biologists search stripped areas for any remnants of the once thriving amphibian. Then what will the dogs of Queensland do? As for Jack, he says there are more ideas on his drawing board. The toads have since thrived and multiplied, in some places reaching infestation density. They certainly have had a negative impact on the native biodiversity and ecology. Killing them is usually done with an attractant, such as light; the animals are picked up with an implement, frozen, and shipped to a factory where they make liquid fertilizer.

Chapter 8 : Harriet Tubman - Wikipedia

Myo armband is an astonishing technology invention which can be used both in video games and during surgeries. It is a rigid pod which consists of rubber cords holding sensors in place. In the future, these armbands can be 3D printed on a global scale.

Being in my 20s, I am already afraid to lag behind. Robots taking over factories and children having AI nannies is no news, but may actually become the year when all these things go on the mass market. They can be either codes or small really small computers embedded in the product itself and tied to the blockchain. Moreover, it can help people to feel more secure about the product and not to spend their money in vain. Omron Robots You probably know that if you are a factory worker, your position in the modern world is quite precarious. Omron robots are amazing as they not only lift heavy objects and move at a rapid speed, but also can freely navigate the environment. Their sensors allow them to detect objects and change their direction accordingly. These robots can even create a new route if the old one proved impossible. Myo Armband Myo armband is an astonishing technology invention which can be used both in video games and during surgeries. It is a rigid pod which consists of rubber cords holding sensors in place. In the future, these armbands can be 3D printed on a global scale. Now with a couple hand movements you can accept a phone call while driving. Surgeons can now perform operations much more accurately and successfully. AI Microscopes Scientists have started to actively utilize AI robotic microscopes in order to study the underwater life. If the IoT technology is utilized and the camera focus is improved, it could allow scientists to monitor the sea life in real-time, thus enabling them to look for solutions more effectively. Earprint Did you know that fingerprints are horribly unreliable and can even be hacked by a special printer? This is what inspired the scientists from Descartes Biometrics to develop a new identification device – the earprint. It sends the sound in your ear which is then echoed back. This echo is different for every person. This software will then use the smartphone sensors to do its job. The process is quick and easy: So, this device might as well substitute fingerprints in the future. This latest technology invention can bring a new era for the cybersecurity world. Online Supermarket Buying something online is already mainstream, but what about navigating your local supermarket from your home? Why bother driving or walking to the store if you can just check and purchase all products using virtual reality technology. While online supermarkets are not new, only in this idea has gained momentum. Some programs even change the product price automatically when it is just about to go bad. This way supermarkets do not have to hire people to monitor the shelves. Moreover, online supermarkets can be highly interactive with videos explaining the benefits and dangers of the product. And there is more around the corner. Just imagine that one day these inventions will turn from breakthrough technology to ordinary everyday appliances.

Chapter 9 : ZioNazi/NWO Quotes: Protocols of Zion

The 25 Best Inventions of Photographs by Lucas Zarebinski for TIME. (ISS), which is roughly the size of a football field, but it's a remarkable machine all the same. China, after all.

They were the result of incredible advances in engineering and innovation as new, powerful civilizations emerged and came to dominate the ancient world. These advances stimulated societies to adopt new ways of living and governance, as well as new ways of understanding their world. However, many ancient inventions were forgotten, lost to the pages of history, only to be re-invented millennia later. Here we feature ten of the best examples of ancient technology and inventions that demonstrate the ingenuity of our ancient ancestors. The ancient invention of the steam engine by the Hero of Alexandria Heron Alexandrinus, otherwise known as the Hero of Alexandria, was a 1st century Greek mathematician and engineer who is known as the first inventor of the steam engine. His steam powered device was called the aeolipile, named after Aiolos, God of the winds. The aeolipile consisted of a sphere positioned in such a way that it could rotate around its axis. Nozzles opposite each other would expel steam and both of the nozzles would generate a combined thrust resulting in torque, causing the sphere to spin around its axis. The rotation force sped up the sphere up to the point where the resistance from traction and air brought it to a stable rotation speed. The steam was created by boiling water under the sphere – the boiler was connected to the rotating sphere through a pair of pipes that at the same time served as pivots for the sphere. Is the Assyrian Nimrud lens the oldest telescope in the world? The Nimrud lens is a 3,000-year-old piece of rock crystal, which was unearthed by Sir John Layard in at the Assyrian palace of Nimrud, in modern-day Iraq. The Nimrud lens also called the Layard lens is made from natural rock crystal and is a slightly oval in shape. It was roughly ground, perhaps on a lapidary wheel. It has a focal point about 11 centimetres from the flat side, and a focal length of about 12 cm. The surface of the lens has twelve cavities that were opened during grinding, which would have contained naphtha or some other fluid trapped in the raw crystal. Since its discovery over a century ago, scientists and historians have debated its use, with some suggesting it was used as a magnifying glass, and others maintaining it was a burning-glass used to start fires by concentrating sunlight. However, prominent Italian professor Giovanni Pettinato proposed the lens was used by the ancient Assyrians as part of a telescope, which would explain how the Assyrians knew so much about astronomy. According to conventional perspectives, the telescope was invented by Dutch spectacle maker, Hans Lippershey in AD, and Galileo was the first to point it to the sky and use it to study the cosmos. While lenses were around before the Nimrud lens, Pettinato believes this was one of the first to be used in a telescope. The Oldest Calendar in Scotland Research carried out last year on an ancient site excavated by the National Trust for Scotland in revealed that it contained a sophisticated calendar system that is approximately 10,000 years old, making it the oldest calendar ever discovered in the world. The site – at Warren Field, Crathes, Aberdeenshire – contains a 50 metre long row of twelve pits which were created by Stone Age Britons and which were in use from around BC the early Mesolithic period to around 4,000 BC the early Neolithic. The pits represent the months of the year as well as the lunar phases of the moon. They were formed in a complex arc design in which each lunar month was divided into three roughly ten day weeks – representing the waxing moon, the full moon and the waning moon. It also allowed the observation of the mid-winter sunrise so that the lunar calendar could be recalibrated each year to bring it back in line with the solar year. The entire arc represents a whole year and may also reflect the movements of the moon across the sky. Ancient Roman Concrete was Far Superior to Our Own Scientists studying the composition of Roman concrete, which has been submerged under the Mediterranean Sea for the last 2,000 years, discovered that it was superior to modern-day concrete in terms of durability and being less environmentally damaging. The Romans made concrete by mixing lime and volcanic rock. For underwater structures, the combination of lime and volcanic ash with seawater instantly triggered a chemical reaction in which the lime incorporated molecules into its structure and reacted with the ash to cement the whole mixture together. Analysis of the concrete found that it produces a significantly different compound to modern day cement, which is an incredibly stable binder. In addition, the ancient concrete contains the ideal crystalline structure of Tobermorite, which has a

greater strength and durability than the modern equivalent. Finally, microscopic studies identified other minerals in the ancient concrete which show potential application for high-performance concretes, including the encapsulation of hazardous wastes. Fire gilding and silvering are age-old mercury-based processes used to coat the surface items such as jewels, statues and amulets with thin layers of gold or silver. From a technological point of view, what the ancient gilders achieved years ago, was to make the metal coatings incredibly thin, adherent and uniform, which saved expensive metals and improved its durability, something which has never been achieved to the same standard today. Apparently without any knowledge about the chemical-physical processes, ancient craftsmen systematically manipulated metals to create spectacular results. They developed a variety of techniques, including using mercury like a glue to apply thin films of metals to objects. The findings demonstrate that there was a far higher level of understanding and knowledge of advanced concepts and techniques in our ancient past than what they are given credit for. The incredible year-old earthquake detector Although we still cannot accurately predict earthquakes, we have come a long way in detecting, recording, and measuring seismic shocks. The device was remarkably accurate in detecting earthquakes from afar, and did not rely on shaking or movement in the location where the device was situated. Eight dragons snaked face-down along the outside of the barrel, marking the primary compass directions. Beneath the dragons sat eight bronze toads, with their broad mouths gaping to receive the balls. The seismoscope detected all of them. As a matter of fact, the data gathered from the tests corresponded accurately with that gathered by modern-day seismometers! Mythical sunstone used as ancient navigational device An ancient Norse myth described a magical gem used to navigate the seas, which could reveal the position of the sun when hidden behind clouds or even before dawn or after sunset. Now it appears the myth is in fact true. In March , a team of scientists announced that a unique calcite crystal, which was found in the wreck of an Elizabethan ship sunk off the Channel Islands, contains properties consistent with the legendary Viking sunstone and that shards of the crystal can indeed act as a remarkably precise navigational aid. According to the researchers, the principle behind the sunstone relies on its unusual property of creating a double refraction of sunlight, even when it is obscured by cloud or fog. The Baghdad Battery The Baghdad Battery, sometimes referred to as the Parthian Battery, is a clay pot which encapsulates a copper cylinder. Suspended in the centre of this cylinder-“but not touching it”is an iron rod. Both the copper cylinder and the iron rod are held in place with an asphalt plug. These artifacts more than one was found were discovered during the excavations of the old village Khujut Rabu, near Baghdad. The village is considered to be about years old, and was built during the Parthian period BC to AD. After the Second World War, Willard Gray, an American working at the General Electric High Voltage Laboratory in Pittsfield, built replicas and, filling them with an electrolyte, found that the devices could produce 2 volts of electricity. The question remains, if it really was a battery, what was it used to power? It baffled scientists ever since the glass chalice was acquired by the British Museum in the s. They could not work out why the cup appeared jade green when lit from the front but blood red when lit from behind. The mystery was solved in , when researchers in England scrutinized broken fragments under a microscope and discovered that the Roman artisans were nanotechnology pioneers: The work was so precise that there is no way that the resulting effect was an accident. In fact, the exact mixture of the metals suggests that the Romans had perfected the use of nanoparticles. The ancient Antikythera mechanism The Antikythera mechanism was discovered in during the recovery of a shipwreck off of the Greek island, Antikythera, in waters 60 meters deep. It is a metallic device which consists of a complex combination of gears, and dates back to the 2nd century BCE. The Antikythera mechanism is one of the most amazing mechanical devices discovered from the ancient world. For decades, scientists have utilized the latest technology in attempts to decipher its functionality; however, due to its complexity, its true purpose and function remained elusive. But in the last few years, a number of scientists appear to have solved the mystery as to precisely how this incredible piece of technology once worked. Peter Lynch, professor of meteorology at University College Dublin, explains: An extendable arm with a pin followed a spiral groove, like a record player stylus. A small sphere, half white and half black, indicated the phase of the moon. Even more impressive was the prediction of solar and lunar eclipses. Just one small cog out of 30 remains a mystery and it is hoped that further research can place this last piece in the puzzle.
