

Chapter 1 : FACT CHECK: Wing and a Prayer

Authorities say the pilot was trapped, but was later rescued and taken to the hospital.

Dipper looking at a map. Other unreleased scenes Mabel and the pink "cat-corns. Mabel plays the fortune tellers game with Bats Biker just like she does in "Headhunters. Mabel plays with some pink "kitten-corns. Dipper and the UFO at the town. A clip shows Dipper running from a crashing UFO. The series only references aliens in cryptograms and the episode " Dipper and Mabel vs. It is 12 minutes long, approximately half the length of a normal Gravity Falls episode. He mentions "that fishing trip," which could be a reference to the events of " The Legend of the Gobblewonker ," and a "telekinesis incident," where Mabel is shown apparently lifting Stan and his couch with her mind. Unlike " Tourist Trapped ," Dipper has his blue pine tree hat throughout the entire episode, instead of him getting it at the end. Stan is in his eighties in the pilot, while he is in his sixties in the series. There is no Journal 3 in the pilot. Instead, Dipper reads a book called "Dr. The book appears to be written in German, which Dipper is able to read. While most of the plot is identical to that of "Tourist Trapped," the climax is completely different. Instead of forming into a giant gnome, the gnomes chase the twins to the lair of a gnome who appears to hold a high position among the gnomes. This gnome asks the twins to solve a riddle to free Mabel. When the twins solve the "riddle" actually a joke found on a popsicle stick , the gnomes turn to stone. Dipper states that this episode was "the least weird day of summer," but in "Tourist Trapped," he expresses boredom for his life in Gravity Falls. There are, of course, noticeable differences in style and character designs. The following are key differences. Dipper has no vest and has differently styled shoes with white tips. He also has white stripes at the ends of his sleeves and at the bottom of his shirt and his Pine Tree hat is worn at the beginning instead of being obtained later in the series like the aired pilot. Mabel has a different outfit and also has white shoes. Dipper and Wendy using a Ouija board. Stan has four fingers in the pilot while in the series he has five. Also, Stan has grey eyebrows and his hair cannot be seen with his fez on, but thick white hair can be seen around his head in the pilot. In this design, Stan has a walking stick with an 8 ball at the base of it. Wendy, seen in other clips, has black hair and her hat and outfit are completely different from in the series. This is probably the case with the musical pieces used in the pilot. Four notable pieces of music are used in the pilot. The second is an instrumental version of " In The Summertime " by Mungo Jerry, which can be heard in the date montage between Mabel and Norman. The third is a brief excerpt of the theme song to the sci-fi comedy " Galaxy Quest ," heard when Dipper first takes off in the golf cart. The fourth and final piece is an excerpt from the score to the horror film, " Nightmare on Elm Street ," used when Stan is being pelted with rocks.

Chapter 2 : Pilot killed in small airplane crash near Los Angeles, officials say - CBS News

Glurge Gallery Wing and a Prayer Rumor: Pilot of a disabled bomber goes down with the plane to comfort a gunner who is trapped in his turret. Pilot of a disabled bomber goes down with the plane to comfort a gunner who is trapped in the turret. I know of only one candidate I covered who could move an audience to tears and laughter — Ronald Reagan. I never had much use for the man but I will never forget the one occasion he left my eyes wet, at a rodeo of all places. It was on one of those hills overlooking Los Angeles and Reagan was running to be Republican presidential candidate. The co-pilot tried to pull him loose but no luck so he headed for the hatch. The pilot put his arm around the boy and said: It may have been an old movie script but, my God, it was moving. This moving tale of the World War II bomber pilot who chose to go down with his disabled plane rather than abandon a trapped gunner in his dying moments has prompted a good deal of philosophical debate: Either way, the vehemence of the debate demonstrates how compelling many have found this anecdote to be. As suggested in the example cited above, this tale was a favorite of Ronald Reagan, who repeated it many times during his presidential campaign. The following excerpt from an April news report about a Reagan campaign swing through Wisconsin demonstrates how frequently and effectively the actor-turned-politician made use of it: The belly gunner was wounded and trapped in his gun turret. And, when the pilot told everyone to bail out, the gunner knew he was doomed. The crowd knew what Reagan was saying to them. It may look like our plane is on fire, it may look like we are trapped, Ron may look old and tired, but he will see us through. He will sit on the floor of the plane and hold our hands. He will be with us. You can see it in their faces and on the posters that they carry. You can see it in every crowd that he draws. In later years, journalists noted that the story, at least in the form told by Reagan, was apocryphal and closely matched a scenario from a wartime Hollywood film although not, as commonly claimed, a movie in which Reagan himself had appeared: One of his favorite stories, one that he told over and over again to different audiences, concerned a pilot in World War II who told his crew to bail out of their crippled B bomber. We can verify that the tale was incorporated into the film *Wing and a Prayer*, although with some substantial differences from the way it was later told: The setting was a torpedo-bombing run made against Japanese ships in the Pacific by carrier-based planes, not a bombing raid launched against German land targets from an airfield in England. The gunner was unable to bail out of the damaged plane because he had suffered an injury to his legs, not because he was trapped in a stuck turret. Andy Rooney, who served as a wartime correspondent for the military newspaper *Stars and Stripes*, suggested in his book *My War* that the tale might have been an embellishment of an actual incident he witnessed, one involving a ball-turret gunner in the belly of a B who was killed when his turret stuck and the crippled plane had to make a wheels-up landing: The worst kind of censorship has always been the kind that newspaper people impose on themselves. I remember one in particular. The Eighth Air Force had a disastrous day when it bombed Regensburg deep inside Germany, and I was at a base waiting to interview some of the fliers when they came back. All of us on the ground that day were relieved as specks appeared in the sky over the Channel. There was a frantic call from one radio operator. The ball-turret gunner was trapped in the plastic bubble hanging beneath the B. The gears that rotated the ball to put the gunner in position to shoot and then returned him to the position that enabled him to climb out and back up into the aircraft had been hit and were jammed. The ball-turret gunner was caught in a plastic cage. Two of the engines of the B were stopped, about 3,000 pounds of dead weight hanging from the wings. The plane was losing altitude fast and flying at barely stall-out speed. The pilot ordered the crew to unload everything on board. The crew started pitching out machine guns. The hydraulic system was spewing fluid where the tubing that conveyed it was shot full of holes. The gas tanks were leaking. The wheels, folded up into the bomber, could not be brought down without its hydraulic system and a belly landing was inevitable. There were eight minutes of gut-wrenching talk among the tower, the pilot, and the man trapped in the ball turret. He knew what comes down first when there are no wheels. We all watched in horror as it happened. I

returned to London that night, shaken and unable to write the most dramatic, the most gruesome, the most heart-wrenching story I had ever witnessed. The incident has been fictionalized in half a dozen different ways over the years. President Reagan, in one of his speeches, told the story of a gunner trapped in the ball turret.

Chapter 3 : "American Girl Trapped on a Telenovela" Pilot (TV Episode) - Release Info - IMDb

Description: We tend to think of emergencies as one-at-a-time events, but as pilot Ken Lawson discovered, bad things sometimes come in pairs. Imagine yourself as a non-current instrument pilot.

In an anonymous videophone call to London Tower, the Hood warns Commander Norman of Air Traffic Control that the motion-sensitive device will detonate from the impact of landing. Fireflash is recalled and Captain Hanson and his co-pilot instructed to circle the airspace above the airport. Air Traffic Control commandeers an Air Force jet that docks with Fireflash in flight, allowing a Lieutenant Bob Meddings to board the hold and attempt to remove the bomb. Meddings is almost killed when he falls through the unclosed maintenance hatch and plummets to the ground; moments before impact, however, he successfully deploys his parachute and ultimately survives. However, the Hood, disguised as one of the airport police detachment, breaks into the unmanned Thunderbird 1 and photographs the cockpit. Scott is alerted by the Automatic Camera Detector and the Hood flees, chased along the M1 motorway by the police. Arriving in Thunderbird 2, Virgil deploys three Elevator Cars, two of which will be remote-controlled from his master vehicle. Fireflash will be guided into a controlled landing on top of the cars, touching down with its undercarriage raised. Virgil and the Elevator Cars rush to intercept Fireflash as it speeds down Runway 29, but when one of the remote-controlled cars malfunctions and crashes into parked aircraft, the rescue attempt is aborted and the operation suspended while Virgil activates a reserve car. Fireflash starts a second run and successfully makes contact with all three vehicles. Applying brakes, Virgil loses control of the master car, which crashes into a trench; he is uninjured, however, and Fireflash comes to a halt before reaching the end of the runway. The bomb is dislodged from its original position but ultimately fails to explode. Although the Hood survives the encounter, his photographs are destroyed. When the topic of the conversation shifts to the Fireflash incident, the doctor declares that he would be honoured to shake IR by the hand. Luckily it was warned off just as it was about to touch down. I will also never forget seeing a Mosquito aircraft that was giving an aerobatics display crashing and blowing up. Years later, when we were working on pre-production for Thunderbirds, I recalled those two incidents and together they helped me form the basic idea for the first episode. On 18 December, "Trapped in the Sky" was transmitted in a re-edited format as the first episode of Turbocharged Thunderbirds; broadcast on UPN in the United States, the programme combined footage drawn from the s series with new, live-action scenes. The first adaptation, with narration from Shane Rimmer in character as Scott, was originally released as the mini-album Thunderbird 1 MA in April by Century 21 Records. There were lots of technical problems and it took ages to shoot the various scenes showing how the pilots reached their craft. We got very weary with it but in the end, when we all saw the finished film, the way Gerry [Anderson] had planned and edited it with the editors, we all agreed it was well worth it. Marsland Gander of The Daily Telegraph, who commented, "It is a show that has to be seen to be disbelieved. I had just watched the first episode of Thunderbirds. I felt as though the whole landscape of what passes for my imagination had been changed. It caused an excitement of the sort that is possible only for the very young, and it lasted for days. Indeed, every Saturday night was a renewal of the miracle. While discussing on the development of the Lockheed Martin SR reconnaissance plane in, Atcliffe made reference to the episode and commented that the time necessary for the fictional Fireflash to fly from London to Tokyo two hours at a reported Mach 6 would be "surprisingly accurate" in reality.

Chapter 4 : Pilot (The Vampire Diaries) - Wikipedia

A British pilot, Commander J D Russell, comes in to land on the HMS Victorious and tragically drowns after rolling off of the flight deck in this footage from For Archive Licensing Enquiries.

BlockedUnblock FollowFollowing We help public services collaborate to tackle complex social challenges. Collaborate, with support from Lankelly Chase, is supporting Gateshead Council and partners to understand the learning from this work, including: The Council Tax Recovery section were well into their stride. The carefully procured software spotted and automated the first letter when the payments started to falter. The Council has a right and responsibility to collect this money. She also had store cards and payday loans. Her mum helps out so Juliet can get to work. She has two zero hours contracts. Ends were meeting, but suddenly they were not. Juliet has a poor relationship with the neighbours. So Juliet reduces her hours and the financial problems begin. She says she can try and pay them off if she can move. Eviction and court action for the Council Tax debts follows and her mental health declines. Social Services are pulled in as the children are disruptive at school. No-one had asked her this. He listened, got to know her, talked about his own life a little in a natural in totally instinctive, uncalculated way. He learned quickly that if she could move, she had a chance. I got a call. Jim asked me if I could help unblock some things. I went to see the Housing Company Director and proposed we move this lady and prevent potential homelessness, care, school exclusion, loan sharks, bailiffs, court and the way it was going, mental health even suicide. Then Jim got his first piece of fan-mail. It will not be his last. From tiny acorns. This confirmed many things we we already knew as people. If this was a wilful non-payer, enforcement seems much more proportionate and reasonable. Even a hard-nosed economist could see the virtue in our eventual approach. We have a prototype which intervenes at the point the bailiff is due to visit and just helps people. DWP and CAB are helping us and we have suspended all the rules. Just go and help people and spend what you need to the watchwords are Proportionate, Legal, Auditable, Necessary. I think this is the beginning of the road to reform. Building services based upon networks of helpful people that can make things happen. This blog will pick up themes around commissioning, service design, motivation, measures, money and the national context of services to the public. Two archetypes are emerging. The Trapped and the Tangled. The most common one is Tangled. Their forward progress is being halted by the cumulative effect of a number of problems or threads. None of them on their own are sufficient to restrain but in combination they are totally debilitating. The prototype team have learned to see these threads by understanding rather than assessing people. This helps to identify and pick away at the threads, in whatever order seems right for them. They have lots of tangled threads, but there is one dominant issue chaining them to their current situation and dragging them downwards. No amount of untangling of the smaller threads makes much difference. Juliet was trapped by the neighbours. Move her and we could work on the tangles. Tangled people mostly need support and maybe a little bit of intervention. The point here is that the current system of assess-do-refer seeks to primarily transact. Juliet was being transacted through court, bailiff and eviction. Expensive, ineffective and just plain wrong. Whoever thought that transacting was a means to efficiency was probably a maker of widgets rather than a helper of people. The reality that leaders in public service of any kind must learn to embrace is that the yearned for efficiencies seen in the repeatable processes of manufacturing do not work for people and their inevitable variation. Mimic this and you get desperate Juliets and pissed off Jims. We have already learned that we can do much much better. Jim is my hero and we have buildings full of Jims that we must set free before they give up, leave and take up less stressful and frustrating careers. To learn more about this work contact Hannah Anderson.
