Chapter 1 : 8 best thomas train track instructions images on Pinterest

Simplified Setup of the Zip Zoom Logging Adventure If you do not want to set up the large and complex version of this Thomas the Tank Engine battery powered train track, there is a simplified version.

This tricky track of twists and turns, based on the film, is a strong sturdy item with plenty of play potential. The box warns that adult assembly is required, but do not attempt to do this under pressure. A coffee, patience and spare hour is required to put this track together. The track is a long one, around four and a half foot and a good area of space will be needed to lay it out. Once up and running, the track provides plenty of play opportunity. It comes with a battery operated Thomas and truck which runs independently around the track. There are hills, a tree tunnel, a zip wire and a log mill. Firstly, put every piece of track in numerical order, start with track number six and go to the left. Once assembled, Thomas and truck puffs around the track in splendid fashion. The main object of play is for Thomas to collect a log, travel to the log mill, place the log onto a conveyor belt which is then moved to a saw and cut in half. There is plenty of interaction required to make this happen, involving points, switches and flipping the right lever at the right time. Whilst the toy is suitable for children over the age of three years, little ones will need a coordinated adult to help them with the zip wire and log chopping. In many ways, it is a very basic toy. But, this makes a refreshing change from toys that are very intelligent and talk to you all the time. The track is not likely to break easily and most joyfully, only one AA battery is required to make the toy work. It does look slightly complicated, but as long as you can count to 18 it will come together, but do not lose the instructions. Whilst no tools are required for track assembly, the item no parents can live without – the Phillips screwdriver will be needed to put in the battery. Before purchasing additional engines to go with the set, check they are compatible first as some will not work with this toy. When we were asked to review this toy for Chopsy Baby, we were delighted. Because it is specifically to do with Misty Island, it is best for a real Thomas fan rather than just as a randomly chosen train set gift.

Chapter 2 : Thomas Zip Zoom | eBay

The Thomas and Friends Zip, Zoom and Logging Adventure train set is a motorized train set based on the Misty Island Rescue movie starring Thomas the Tank Engine and his merry friends. Create your own adventures on the island with Thomas as he meanders around the tracks, visits the mill to split a log, zooms across the zip-line bridge, and chugs.

The tracks and train stations can be navigated hands-free by the battery operated trains, which include all of the characters from the Thomas the Train cartoons. Set up must be done properly to enable the trains to travel the railroad smoothly. Lay out the pieces of the track. These are the brown, rectangular pieces upon which the trains will travel. Some curve to mark where the track curves. Turn all of these pieces right side up, and arrange them next to each other until they resemble a track. Hook the grooves of the track pieces into one another. Make sure all of the pieces are secure and that the shape resembles an oval train track. Connect the base of the station to the track. The base is the long gray piece. It will have grooves that attach to the starting point on the track. Attach the house to the base of the station. The house is made up of the yellow pieces. Look at the graphics on the pieces for guidance. The body of the station is the largest piece and resembles a house with windows on the front. This clicks into the largest grooves at the center of the base. Attach the fence to the base of the station. When facing the station, the yellow fence pieces will click into the grooves in back of the house so that the fence is surrounding the house. Insert one AA battery into the train. Turn the train on, and place it on the track. Click the lever on the track to let the train run freely around it. Click the lever back to stop the train.

Chapter 3 : Thomas The Tank Engine Trackmaster Logging Adventure Set | eBay

Thomas & Friends TrackMasterâ„¢ Zip, Zoom & Logging Adventure. Product#: R Released: Thomas & Friends TrackMasterâ„¢ Zip, Zoom & Logging Adventure.

It is a big track, and while you think you may be able to remember how you set it up originally, it probably will not be as simple the next time if you do not have the assembly directions. I am going to do my best to explain in writing how to set up the track so that it fits the way it was intended. I will take it in three steps. The loop that begins and ends at the log mill. The loop that includes the zip line. It starts at the switch from the log mill loop and continues until it meets up again at another switch on the mill loop. All of the pieces - tracks and track risers - are labeled with a number on the bottom. I will list the pieces in order according to the labels. Also, as I describe the track I am imagining the log mill in the front, on the right. The Log Mill Loop First of all, the pieces to which the mill attaches are 6 and 7. So beginning with piece 6 and going clockwise, the order of pieces is: The mill should be firmly snapped into place in order to make it work. The Zip Line Loop The zip line is the most exciting feature of this train track. At piece 4 of the log mill loop there is a switch that can make Thomas the Train go across the line. In order to put together the line tracks, assemble them in this order, starting with piece 4: The line loop goes under the mill loop after the line, and it goes over the log mill loop at piece 17. Now you should have the track pieces assembled. However, it will not work since the track risers are not assembled. L2 - the lowest track riser L4 - the middle track riser L5 - the highest track riser The risers go between two track pieces, where the track pieces connect. They go in the following places: Pieces 15 and 14 connect in the tree. Zip Line Track Riser - The large line track riser connects with piece 18 where the beginning of the zip line hangs. Zip Line Ending Point - The end of the line attaches to piece 17, and the end of the line hangs from it. Simplified Setup of the Zip Zoom Logging Adventure If you do not want to set up the large and complex version of this Thomas the Tank Engine battery powered train track, there is a simplified version. Again, starting with pieces 6 and 7, where the mill attaches, the order of the pieces go as such: Two L4 risers are used. One goes between pieces 16 and 15, and the other goes between pieces 15 and 14. Again, the large zip line riser goes at the end of piece 17. This version of the track is smaller, but it still allows the Thomas fan to play with a working log mill and the line. However, this version does not take up as much space as the big version and is easier to assemble. Hopefully I have described all of the directions. These tracks are smaller and geared towards younger kids. But they are much easier to assemble. Hopefully you can get this track back together with these Zip Zoom Logging Adventure instructions.

Chapter 4 : Thomas TrackMaster (Fisher-Price) | Thomas and Friends TrackMaster Wiki | FANDOM powered by Wikia

Zip, Zoom and Logging Adventure is a TrackMaster set by Fisher Price in the Misty Island Rescue series. Thomas in this set, can go on the zip line which transports him to the other side of the rails.

Chapter 7 : Thomas Trackmaster Assembly Instructions | How To Adult

As for the set, the Logging adventure is far and away the best Trackmaster Thomas set that we own. There are elevation changes, a resetable zip-line, a conveyor belt that lifts a plastic log, a finger-powered log-splitter, a hollow log "tunnel" and a generally interesting track layout.
