## Chapter 1 : Time-Life Books | Open Library

*Time-Life Book of Garden Improvement Techniques: The Definitive Step-By-Step Guide to Successful Gardening [Sarah Wood, Liz Dobbs, Catriona Tudor Erler, Time-Life Books] on blog.quintoapp.com \*FREE\* shipping on qualifying offers.*

All have proven invaluable to me over my years of garden-making. Applied by any gardener, amateur or professional, they will result in a more successful, satisfying design. Probably derived from behavioral psychology studies, this rule came to me from a professor in graduate school, and it was one of the best things I learned. On this project in Pacific Palisades, CA, an existing and overgrown row of ficus was reduced by half knowing it would still more than adequately enclose the patio. Illustration by David Despau. Just yesterday, as I was starting the design of a patio that I wanted to separate from an adjacent play area, it gave me instant guidance for how tall a hedge I would need: Of course, there are times when the point of a landscape design is a monumental sense of scale or view, but the best gardens, whatever their size, modulate a feeling of enclosure and openness, and this rule will help. For example, in laying out one backyard, I projected the lines of its building addition into the garden space and then aligned the swimming pool and wooden walkway with those lines. The result is orderly and cohesive, even after being softened with planting. Another regulating line is created by the edge of the pool running parallel to the glass window on the home. These lines intersect at the base of the tree. Le Corbusier hits on the two aspects a bit paradoxical, perhaps that make the regulating line so valuable. First is the idea of underlying order: Numerically, the Golden Rectangle ratio is close to 1: The raised beds in my vegetable garden are 5 by 8 feet. Raised planters in my garden follow the Golden Rectangle. Note, too, the significant enclosure provided by the Eugenia hedge. Church, often credited with creating the California style. Laid out in his seminal work *Gardens Are for People*, it says simply that twice the height of the riser plus the tread should equal 26 inches. That means that if the riser is 5 inches, the tread what you walk on should be 16 inches. A useful corollary states that 5 feet is the minimum width for two people climbing steps side by side. Recommended Landscape Design Resources.

## Chapter 2 : Time Life Books | eBay

*Time-Life book of garden improvement techniques: the definitive step-by-step guide to successful gardening. [Liz Dobbs; Sarah Wood] -- Advice for planning a garden takes into consideration the climate and site, landscaping techniques, lawns, soil, maintenance, and types of plants including flowers, vegetables.*
