

Chapter 1 : The Quietus | Reviews | Laraaji

Transforming our health system towards Health Vision National Health Plan Vol.1 Policies and Strategies: to our vision for a happy, healthy.

Medical Mystery 1 Medical Mystery 1: What is your diagnosis and treatment plan? This is the first in our series of case discussions that are designed to help folks work around the barriers they have found in their quest for best care and treatment of a specific life, limb, or organ threatening medical problem. We have been struggling to help him get a definitive diagnosis and therapeutic plan since his first stroke in February I need a definitive diagnosis and therapeutic plan to help me manage the recurrent embolic events I have been having since February 3, 31 year old, married no children white male. With multiple embolic events of undetermined cause Medical Mystery 1: Narrative summary Present Illness: Since that date he has demonstrated several, embolic strokes and an MI. History of random, uncontrolled embolic events that has produced 4 ischemic strokes, 1 myocardial infarction and is strongly suspected in significant renal scarring resulting in Stage 3 renal failure. To date no definitive cause for these clots has been determined and no certainty current treatment will control future events. Hypercoagulable studies completed several times. Wears glasses for magnification, is a Braille reader. No recorded history of blindness in either parent or in their extended families. Medically unremarkable adolescence and early adulthood. Attended college and currently works for city police department in the Southwest. He has two siblings—older brother by 2 years with normal vision and health. No history of leukemia or other significant cancers in family prior to this. Please send your questions, comments, suggestions, suggested differential diagnosis, Recommended Diagnosis and Treatment plans to mfmascia VeritasHC. We prefer that you keep your name OFF the blog comments and submit details by email for purposes of patient and physician confidentiality. Respectfully submitted by Michael F. Paroxysmal afib until proven otherwise. Did not see long term outpatient cardiac rhythm monitoring in the work up. Needs loop recorder or similar. Clinical history points to repeated arterial clotting events. Hyper-coagulation screen was performed with no definite answers, therefore suggest a auto-immune screen anti-nuclear factor , b exclude presence of lupus anticoagulant, and c anti-cardiolipin titre. Lifelong anti-coagulation appears to be the way forward, either warfarin target INR 2. There have been no suggestions from patients. Social media has given no responses to date.
