

**Chapter 1 : ~Arrow™ Season 7 Discussion: Is [Spoiler] the New Green Arrow? | TVLine**

*Your Green Future is an interactive event which engages hundreds of 11 to 18 year olds with the role of sustainability in the economy and what this could mean for their future careers.*

You can hardly escape it on the Internet, and now with the Planet Green TV network, you can even enjoy eco-friendly entertainment 24 hours a day. Worse, you could even be suffering from a little green "fatigue" -- that is, tuning out the green messages due to their ubiquity. As globalization makes the world become smaller, it becomes increasingly easy to see how the lives of people and plants and animals and ecosystems everywhere are closely synced up with one another. So toys made in China can affect the quality of life in Europe, pesticides used in Argentina can affect the health of people in the U. The truth is that everything single thing we do every day has an impact on the planet -- good or bad. The good news is that as an individual you have the power to control most of your choices and, therefore, the impact you create: For example, did you know that 25 percent of Western pharmaceuticals are derived from flora that come from the Amazon rainforest? And that less than one percent of these tropical trees and plants have been tested by scientists? These numbers suggest that we all have a large and growing personal stake in the health and vitality of places far and near. In addition to protecting biodiversity and inspiring medicine, rainforests are also excellent carbon sinks. It benefits everyone on the planet to help keep our wild spaces alive and growing. All that and you can save furry animals, too? Keep reading for all the important, big-picture details. Top Ten Tips Real food is fuel for the body -- and the planet. According to one study, organic milk has 68 percent more beneficial Omega-3 fatty acids than conventional milk. Making green food choices also has global consequences. Buying local means supporting the local economy and reducing the greenhouse gas emissions required to get food from its origin to your plate. Buying fresh food means reducing packaging and energy used for processing. Choosing organic foods means helping promote organic agriculture and responsible land use. To learn more check out How to Go Green: The average woman absorbs more than 4 pounds of cosmetics during her lifetime. Considering that most of us use about 10 different products daily, that can really add up. Choosing green personal care products often means using plant-based ingredients in place of petrochemicals, preventing these chemicals from being absorbed into your skin. Learn how to keep your grooming regimen on the level with our How to Go Green: Making stuff takes lots and lots and lots of energy. Every object you own -- your furniture, your clothing, your beer cans, your stuff -- comes from somewhere; every object has an environmental impact. Nothing simply comes from "the store. Your choices will help protect forests, habitat, clean water and biodiversity; ensure sustainable land-use practices; and reduce the amount of waste clogging up our landfills. Buying less stuff and second-hand stuff helps achieve this goal, too. See our How to Go Green: Furniture, and BuyGreen Guides for more info on sourcing these products. Clean, renewable power is already available to everyone. We use electricity to power our lights, computers, and televisions, but what happens before you flip the switch? By generating your own power, or purchasing renewable energy credits also known as "green tags", you contribute to our collective capacity for generating more clean power from wind, solar, and other sources and you help reduce demand for energy from more polluting sources. Learn more about how to make your electrical footprint lighter in our How to Go Green: Better transportation means less global warming. Anytime you choose to walk, ride a bike, or take public transportation, you reduce or totally eliminate the carbon dioxide and particulate emissions created by driving a gas- or diesel-powered car. Choosing greener options such as a train over air travel for long-distance trips can immensely reduce your carbon footprint. Get to the nitty-gritty in our How to Go Green: Cars and How To Go Green: Making proper use of the blue recycling bin has become an iconic action. Reducing the amount of stuff we consume is the first step and the first word in the mantra reduce-reuse-recycle, finding constructive uses for "waste" materials is the second. Nothing is ever really thrown "away" -- it all has to go somewhere. Recycling materials also saves energy compared to using virgin materials to create new products. Some materials, like aluminum and glass, can even be recycled without being "downcycled," or turned into a product of lesser quality. Recycling guide for more details. Your clothing choices impact more than just your appearance. Making clothing involves a large amount of

materials, energy, and labor including the pesticides used to grow crops for textiles, the dyes and water used to color them, and conditions under which laborers work. How you care for your clothes - using cold water in the washing machine, eco-friendly detergents, and line-drying at least part of the time - can all reduce the impact of your wardrobe. Wearing second-hand styles helps divert traffic to landfills, and in some cases - perhaps undurprisingly -- can be 95 percent more efficient than buying new. Learn more about greener choices in our *How to Go Green: Wardrobe and Laundry guides*. Water is not a renewable resource. By shifting away from bottled water, we can reduce global greenhouse gas emissions from shipping, the energy required to produce petroleum-derived plastic, and the volume of waste trucked to our landfills from empty bottles. Have a peek at our *How to Go Green: Water Guide* for more details. Greener goods are more humane. Just as its required materials and energy, all "stuff" requires another common resource: If you opt for green and ethical goods, you are often supporting local and global craftsmen and communities. Supporting "Fair Trade" products and fair labor practices ensures that goods-- from coffee to clothing were not born in a sweatshop. Buying goods made in the U. Read the *How to Go Green: Wangari Maathai won the Nobel Peace Prize in*, the awarding committee recognized her accomplishments by saying, "Peace on earth depends on our ability to secure our living environment. By the Numbers 1 pound per hour: The other two-thirds is lost to heat. That means you can make 20 cans out of recycled material with the same amount of energy it takes to make one can out of new material. Energy savings in one year alone are enough to light a city the size of Pittsburgh for six years. Getting Techie A biodiversity hotspot is a bio-geographic region with a significant concentration of biodiversity that is threatened with destruction. To qualify as a biodiversity hotspot, a region must contain at least 1, species of vascular plants as endemics -- species not naturally found elsewhere -- and it has to have lost at least 70 percent of its original habitat. Around the world, at least 25 areas qualify under this definition, with nine others possible candidates. Shifted cultivators is the term used for people who have moved into rainforest areas and established small-scale farming operations, following roads built by loggers or other resource-extractors into already damaged rainforest areas. The additional damage they are causing is extensive. Shifted cultivators are currently being blamed for 60 percent of tropical forest loss. The reason these people are referred to as "shifted" cultivators is that most of them people have been forced off their own land. For example, in Guatemala, rainforest land was cleared for coffee and sugar plantations. The indigenous people had their land stolen by government and corporations. Upcycling is the use of waste materials to provide useful products. Ideally, it is a reinvestment in the environment and embodiment of the notion that while using resources one is also contributing to them and their value. Some of our favorite examples include a collection of rulers turned into a chair, and plastic gift cards tastefully upcycled into some chic coasters. Downcycling is the recycling of one material into a material of lesser quality. The example used most often is the recycling of plastics, which, because the recycling process breaks the polymer chains, turns them into lower grade plastics. When different kinds of plastics -- like 1 PET and 4 LDPE -- are mixed together and melted, the mixture undergoes something called phase separation, roughly akin to the separation of oil and water, and it sets in those layers. The resulting plastic is structurally weaker than its original form, and can only be used in a limited number of ways. Omega-3 fatty acids have been made famous by their occurrence in lots of different fish, and they have a variety of handy health benefits, including everything from improved cardiovascular health and reduced symptoms of arthritis to help treating depression and anxiety. Negative peace is the absence of physical violence such as war or environmental destruction. Positive peace is the absence of structural violence or systemic injustice. Positive peace can be defined as the presence of norms, policies, systems, and practices that respect human dignity, meet human needs, and uphold social and environmental justice and the sustainability of human and nature communities. Both negative and positive peace imply a commitment to nonviolence in human interactions within the human community and within the larger community of life. *Innovation Inspired by Nature* by Janine Benyus.

**Chapter 2 : 10 reasons to go green starting NOW | TreeHugger**

*The latest Tweets from Your Green Future (@YourGreenFutur). an interactive event which brings together schools and businesses in order to explore the growing opportunities in a low carbon, resilient economy.*

Green technology investments are taking a variety of forms, with increases in wind power and electric vehicle developments, the installation of renewable power capacity reaching new highs and significant increases in public market investments worldwide. Across the globe in , Asia-Pac is leading investment with solar powered innovations drawing in the greatest funding. While some clean technologies offer improvements that increase resource productivity and efficiency, others decrease environmental impact. As green technology continues to emerge as a growing force, several strong industry clusters have emerged with varying levels of investment as innovation trends emerge and change. For more, see also: Top 10 Green Industries. As global green technology investments have grown so to have the number of countries participating. With the trend for solar and wind maintaining its momentum in , electric vehicles have also been gaining attention. China overall was also reported as the leader in electric vehicle sales for with a total of , Countries Public and private markets have been steadily allocating funds to green technology with more IPOs occurring all over the world. Public markets however are pouring most of their investments in solar and wind. During the first round of funding, 40 different technologies received a share of the funds. Green Technology Investments Abound Investors who are considering taking the plunge into green technology would do well to take the time to understand a bit of background behind this sector, including the goals that serve as the foundation for this rapidly growing field. Investors will find there are numerous subsectors in green technology that currently provide excellent opportunities for investments. New IPOs can also top prospects as many smaller, successful private companies grow and list on exchanges. Take the time to do your research and understand the basis of the technology that is being developed before you decide whether to financially back a particular company. The best way to determine whether the environmental practices and technology behind a company are solid, or are simply greenwashing, is to ask questions. The Bottom Line Investors searching for environmentally responsible, financially sound investments will find abundant opportunities. Admittedly, this can be a somewhat daunting task, but taking the time to conduct your research prior to making an investment can help you to select opportunities that will help you to protect your personal wealth, as well as the environment. Remember to consider the investment level that best aligns with your level of financial commitment, risk tolerance and goals, while also supporting environmental goals and sustainable practices through the latest technological advances. Chapter 3 : Investing in Green Technology – the Future Is Now | Investopedia

*Be the change, be the future, be green. Everything has a beginning, is this where your green project begins? Contact Us. 5 Lemon Ave , Walnut, CA.*

Book My Consultation Act Now - free spots fill up fast! Your Green Card gives you the ability to work for any company located in any U. With a Green Card there is no need for employer sponsorship. However, upon giving up Green Card you will lose this right. You cannot start and run your own business or corporation after giving up Green Card. You will need to have an appropriate visa to do this. Unlike permanent residence, if you come to the U. However, if you obtained a green card for your family, they will retain it even if you give up or lose your status. If you are a Green Card holder, your spouse and minor unmarried children under 21 years of age can qualify for permanent residence as dependents, and once permanent residence is granted they are allowed to stay in the U. On the contrary, after giving up US green card, your spouse and children will have to obtain appropriate visas to study and work except in a few visa categories. In many cases you cannot get a mortgage for home purchase if you are a nonimmigrant in the U. Many banks require Green Card or some other long-term visa before granting a mortgage. Many banks may charge higher rates for non green card holders for a mortgage. Changes in immigration rules may hurt your chances of obtaining a nonimmigrant visa to the U. You may lose your Green Card only when you violate the terms of your Green Card. Green Card holders receive Social Security benefits when they retire, whereas a nonimmigrant visa holder does not. Conclusion Think twice before giving up your Green Card. If you stay outside the U. The benefits that you enjoy being the permanent resident of the U. Keep the points discussed in this article in mind if you are thinking of giving up your Green Card voluntarily! Now after reviewing some of the issues surrounding giving up your green card, it is wise for Kenji to do so. While the ultimate decision is up to Kenji the benefits of the green card far outweigh the current hassles that he is experiencing. If you have questions about the pros and cons of giving up green card, consult a VisaPro immigration attorney. We will be happy to guide you through the process. We were exceptionally impressed with how they have combined the great personal and communication skills they bring and also technology with a highly intuitive website which guides you and keeps you updated throughout the process!.. This is a true testimonial, I would highly recommend Visapro to anyone looking for guidance and success in this area.

## Chapter 4 : Your Green Future

*Your Green Future @YourGreenFutur an interactive event which brings together schools and businesses in order to explore the growing opportunities in a low carbon, resilient economy.*

Best-Selling Author, International Entrepreneur Coach, Teacher 6 Questions Your Future Self Would Ask You Right Now If you were to take a mental field trip and visit your future self, the one who is no longer struggling with the situation that is currently causing you the most stress, what advice would he or she give you? I walked around the cold city of Chicago feeling lifeless, numb and bored with life. I would obsess over my day, and feel tremendous guilt and anxiety tied to my eating disorders, drug addictions, poor choices in men, and misery about staying in a job I hated. I would do whatever I could to avoid the sinking feeling that I hated my life. Today my life is much different than the depressed girl, forever exhausted from her tears. Today I am happy, healthy and in love with life and with myself. I just made it a daily practice to remove the barriers that were keeping me from expressing my true self. Many of us are depressed, or we go through moments of feeling stuck in life. The fastest way to remove depression and fear from our life is to access our true and unique self. I started to reflect on the key differences between my life today and how it was then. What I learned through those experiences is that life is too short to stay at war with ourselves, and the longer we make excuses and allow ourselves to stay stuck in our bad habits, the shorter our lives will become. If you were to take a mental field trip and visit your future self, the one who is no longer struggling with the situation that is currently causing you the most stress, what advice would he or she give you? Are you giving more faith to your fears than your dreams? Leaning into love is the fastest way to manifest your dream life. Believe in yourself and the power of your dreams. Recognize that fear is a manifestation of insecurity and worry. It does not need to control your actions. Instead lean into love. Look at every area of your life -- your relationships, your career, your financial situation, your health, your environment and identify any areas where you are settling. Your future self wants you to take action today to disrupt the habit of settling. You deserve better for yourself, and you need to trust the big picture. Are you listening to your body? Your body is the greatest tool for assessing your inner happiness and health. If you bulldoze over your feelings, you could miss the opportunity for grace and authentic happiness. Your body will tell you when you are hungry or tired, and when it is time to relax or else get out and move and sweat. Learning to listen to your beautiful body and accept it for its uniqueness will help you feel more peace. Are you your own best friend? Listening to the advice of others and ignoring your own inner guidance can keep you feeling stuck in life. Learn to trust your heart and become your own best friend. Are you accepting others, including yourself, for who they are not who you want them to be? Instead of spending so much time focusing on what is not working, turn inward and ask how you can improve yourself? Are you being kind and compassionate to your own self? Be gentle with this process; accepting people for who they are will help you attain lasting inner peace. Are you enjoying the journey and releasing your expectations of the destination? The magic is in this moment; let your goals drive you, but do not let them define you. The journey is where the fun is, so give yourself time to be present in this moment because this moment is all we will ever have.

**Chapter 5 : Top Reasons Your Green Card Might Be Denied | [blog.quintoapp.com](http://blog.quintoapp.com)**

*Join us in activating the next generation of Green Leaders here in Bali [blog.quintoapp.com](http://blog.quintoapp.com) Film by Far Featur.*

Teri Beau People are so ridiculous. The GOP really needs to come up with some ideas and solutions, and stop trying to sound bite and polarize us all back into a trance. B A Phillips Yes. The whole purpose of courts is to have human beings relating to the context of issues, decide them within existing and evolving legal frameworks. An automaton cannot be a judge. Written law is never that clear, and facts are muddy. Empathy is a precious quality of human connectedness. But it does not need to sway a judge away from judicial constraints. Consider large, horizontal, flywheels, to store excess energy and extract as needed. They could be suspended by maglev, drawing from the flywheel itself. Looks like the future of mainstream green jobs will be duked out in the house and senate for years to come, along with its associated policies. Takes a while for it to sink in, but it works. Sheri Victoria, use your brain. Start thinking for yourself. Sheri To Jim Sosa: You have some serious delusion going on, and are in dire need of mental help and deprogramming. Your program is nothing more than Pravda news. When NOW had presented shows in the past which I had enjoyed, I was too lazy to post any of my comments. Even when I really enjoyed them, I still sat on my thumbs. I hope this show has inspired others as well. E Savage One needs to include sentiment along with legal rationale. If not for human empathy we could program a computer smart enough to play chess to make the decisions. You may want to refresh yours a bit. Van Jones is a civil rights attorney, an author, and an environmental advocate. He is 41 -- not that young. He founded the Ella Baker Center for Human Rights, an organization working for alternatives to violence and incarceration. Native Americans call what your white ancestors did genocide, not colonization. Most of the brown folks you refer to are not here by choice. We need to heal the past, move forward, and embrace the now and future together as the moral, strong nation we purport to be. Victoria Wellington, How much will it cost to sit and do nothing in this economy? How much will it cost to sit by and allow the CO2 to increase in our atmosphere, quickly warming our planet, increasing wildfires, childhood asthma, species extinction, and deadly hurricanes. Van Jones is creating jobs to save our economy, our community, and our planet do some research on his accomplishments thus far. David asked the proper and necessary questions "the public needs" answered; to help us survive this recession and to help us save our planet. Optimism goes a long way. SpringGirl My daughter in law has a Ph. She was looking to the future when she did her degree, and now the future is finally catching up to her. Every car driven by members of my immediate family is a hybrid. Clodfelter I saw a black president of my country appointment a fast talking young black man promote a green future with black, and brown groups with little or no education to take over the white white color, and white blue color jobs in the future of my country that my family came here to help colonize. This is not the change that I would have voted for. You are a good journalist; use your access to ask the questions the public needs answered. This is such a wonderful time in our country. We have gone from the darkness to the light in one election. We have a long way to go, but as a "boomer" I am thankful to see a new generation carrying on the gains we worked for. In my later years I never expected to take the "fight" to College Station, TX - but doing so has renrgized my wife and I. If we had retired to Maine as we planned it would not be as much fun as we are having here in the middle of a conservative community. NOW is one of the bright spots in our week. Please keep up the good work.

**Chapter 6 : FUTURE NOW ENTERPRISES, INC. | LIVE YOUR FUTURE NOW**
